A. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels 2023.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide product data for manufactured products and assemblies required for this project. Include component sizes, rough-in requirements, service sizes, and finishes. Include product description and model.

C. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

D. Project Record Documents: Record actual locations of flow controls.

E. Maintenance Data: Include installation instructions, assembly views, lubrication instructions, and replacement parts list.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

PART 2 PRODUCTS

2.01 AIR VENTS

A. Manufacturers:
   1. Armstrong International, Inc; _____: www.armstronginternational.com.
   2. ITT Bell & Gossett; _____: www.bellgossett.com.
   3. Taco, Inc; _____: www.taco-hvac.com.

B. Manual Type: Short vertical sections of 2-inch diameter pipe to form air chamber, with 1/8 inch brass needle valve at top of chamber.

C. Float Type:

1. Brass or semi-steel body, copper, polypropylene, or solid non-metallic float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve.
2. Cast iron body and cover, float, bronze pilot valve mechanism suitable for system operating temperature and pressure; with isolating valve.

2.02 STRAINERS

A. Manufacturers:
1. Armstrong International, Inc; _____: www.armstronginternational.com.
2. Mueller____.

B. Y-Pattern Strainers:
1. Chilled Water, Condenser Water and Hot Water Systems of Steel Construction:
a. Working pressure: To 250 psig, non-shock.
1) Sizes 1/4 inch to 2 inch: ANSI 250 lb. Class.
(a) Connections: Threaded.
(b) Body: Cast iron, ASTM A126, Class B. With machined seat for screen retention. Galvanized as required to match connecting piping.
(c) Cap: Bronze, gasketed.
(d) Screen: 20 mesh. 304 stainless steel, ASTM 240. Free area not less than 2-1/2 times inlet area.
(e) Blowoff outlet: With female NPT tapping.
(f) Mueller model No. 11 MFCB.
2) Sizes 2-1/2 inch to 24 inch: Class 250.
(a) Connections: Flanged.
(b) Body: Cast iron, ASTM A126, Class B. With machined seat for screen retention. Galvanized as required to match connecting piping.
(c) Cover flange: Cast iron, ASTM A126, Class B. With machined seat for screen retention. With female tapped NPT blowoff connection. With EPDM O-ring seal.
(d) Screen to 8 inch: 1/8 inch perforations. 304 stainless steel, ASTM 240. Free area not less than 2-1/2 times inlet area.
(e) Screen 10 inch and larger: 5/32 inch perforations. 304 stainless steel, ASTM 240. Free area not less than 2-1/2 times inlet area.
(f) Magnets: Provide magnets for strainers. All 8 inch and larger. At each pump suction. With continuous magnetic field around entire circumference of screen. With removable cast Alnico No. 5 channel magnets with acceptable baskets constructed of magnetic alloy. Secured with stainless steel retaining lugs and threaded rods.
(g) Blowoff outlet: With female NPT tapping.
(h) Mueller model No. 752.
2. Chilled Water, Condenser Water and Hot Water and Glycol Systems of Copper Construction:
a. Working pressure: To 250 psig, non-shock..
1) Sizes 1/4 inch to 2 inch: Class 250
(a) Connections: Threaded.
(b) Body: Bronze, ASTM B62. With machined seat for screen retention.
(c) Cap: Bronze, ASTM B62. With machined seat for screen retention.
(d) Screen: 20 mesh. 304 stainless steel, ASTM 240. Free area not less than 2-1/2 time inlet area.
(e) Blowoff outlet: With female NPT tapping.
(f) Mueller model No. 352M.

2.03 PRESSURE-TEMPERATURE TEST PLUGS

A. Manufacturers:
1. Ferguson Enterprises Inc; _____: www.fnw.com.

2. Peterson Equipment Company Inc; _____: www.petesplug.com.
3. Sisco Manufacturing Company Inc; _____: www.siscomfg.com.

B. Construction: Brass body designed to receive temperature or pressure probe with removable protective cap, and Neoprene rated for minimum 200 degrees F.

C. Application: Use extended length plugs to clear insulated piping.

2.04 RELIEF VALVES

A. Manufacturers:
1. Apollo Valves; _____: www.apollovalves.com.
2. Armstrong International, Inc; _____: www.armstronginternational.com.
3. ITT Bell & Gossett; _____: www.bellgossett.com.
4. Conbraco Industries; ____: www.apollovalves.com.

B. Bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, capacities ASME certified and labelled.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install specialties in accordance with manufacturer's instructions.

B. Provide manual air vents at system high points and as indicated.

C. For automatic air vents in ceiling spaces or other concealed locations, provide vent tubing to nearest drain.

D. Provide valved drain and hose connection on strainer blowdown connection.

E. Provide relief valves on pressure tanks, low-pressure side of reducing valves, heat exchangers, and expansion tanks.

F. Select system relief valve capacity so that it is greater than make-up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment.

G. Pipe relief valve outlet to nearest floor drain.

H. Where one line vents several relief valves, make cross-sectional area equal to sum of individual vent areas.

END OF SECTION 232114

SECTION 232213
STEAM AND CONDENSATE HEATING PIPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pipe and pipe fittings.
B. Pipe hangers and supports.
C. Steam piping system.
D. Steam condensate piping system.
E. Strainers.
F. Thermostatic air vents and vacuum breakers.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.
B. Section 230523 - General-Duty Valves for HVAC Piping.
C. Section 230547 - Vibration controls for HVAC.
D. Section 230553 - Identification for HVAC Piping and Equipment.
E. Section 230719 - HVAC Piping Insulation.
F. Section 232214 - Steam and Condensate Heating Specialties.
G. Section 232500 - HVAC Water Treatment: Pipe cleaning.

1.03 REFERENCE STANDARDS

A. ASME B16.3 - Malleable Iron Threaded Fittings: Classes 150 and 300 2021.
B. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings 2018.
C. ASME B16.11 - Forged Fittings, Socket-Welding and Threaded 2021.
D. ASME B31.1 - Power Piping 2022.
E. ASME B31.9 - Building Services Piping 2020.
F. ASME BPVC-IX - Boiler and Pressure Vessel Code, Section IX - Qualification Standard for Welding, Brazing, and Fusing Procedures; Welders; Brazers; and Welding, Brazing, and Fusing Operators 2023.
G. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless 2022.
H. ASTM A182/A182M - Standard Specification for Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service 2023.
I. ASTM A312/A312M - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes 2022a.
J. ASTM A403/A403M - Standard Specification for Wrought Austenitic Stainless Steel Piping Fittings 2022b.
K. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation 2018, with Amendment (2019).
L. UL 508 - Industrial Control Equipment Current Edition, Including All Revisions.

1.04 DEFINITIONS

A. HP Systems: High-pressure piping operating at more than 15 psig (104 kPa) as required by ASME B31.1.
B. LP Systems: Low-pressure piping operating at 15 psig (104 kPa) or less as required by ASME B31.9

C. Below atmosphere Vacuum return piping is piping operating below 0 PSIG up to 29 inches of mercury .

1.05 SYSTEM DESCRIPTION

A. When more than one piping system material is selected, ensure systems components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, unions, and couplings for servicing are consistently provided.

B. Use unions and flanges downstream of valves and at equipment or apparatus connections. Use dielectric unions where joining dissimilar materials. Do not use direct welded or threaded connections.

C. Provide pipe hangers and supports in accordance with ASME B31.9, MSS SP-58, or ASME B31.1 unless indicated otherwise.

D. Use gate valves for shut-off and to isolate equipment, part of systems, or vertical risers.

E. Use globe valves for throttling, bypass, or manual flow control services.

1.06 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressures and temperatures:
1. LP Steam Piping: 125 psig (861 kPa).
2. Condensate Piping: Same as pressure for associated steam piping system.
3. Makeup-Water Piping: 80 psig (552 kPa) at 150 deg F (66 deg C).
4. Blowdown-Drain Piping: Equal to pressure of the piping system to which it is attached.
5. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is attached.
6. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is attached.

1.07 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on pipe materials, pipe fittings, valves and accessories. Provide manufacturers catalogue information. Indicate valve data and ratings.

C. Welders Certificate: Include welders certification of compliance with ASME BPVC-IX.

D. Manufacturer's Installation Instructions: Indicate hanging and support methods, joining procedures.

E. Project Record Documents: Record actual locations of valves.

F. Maintenance Data: Include installation instructions, spare parts lists, exploded assembly views.

G. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
1. See Section 016000 - Product Requirements, for additional provisions.
2. Valve Repacking Kits: One for each type and size of valve.

H. Shop Drawings: Detail, [3/8 inch equals 1 foot scale, flash tank assemblies and fabrication of pipe anchors, hangers, pipe, multiple pipes, alignment guides, and expansion joints and loops and their attachment to the building structure. Detail locations of anchors, alignment guides, and expansion joints and loops

I. Prepare general layout drawings as follows:
1. Minimum 3/8 inch scale piping layout with fittings, valves and equipment, use single line for pipe sizes 3 inches and smaller and double line for pipe sizes 4 inches and greater.
2. Minimum 3/8 inch scale double line layout and sections including for coordination drawings.
3. Indicate location of hangers, supports, guides and anchors, expansion joints, loops, drains, vents and sleeves.

J. Stress analysis.

K. Steam piping layout:
   1. Prepare steam piping shop drawings.
   2. Prepare stress analysis based on steam piping shop drawings.

L. Qualification Data: For Installer.

M. Field quality - control test reports.

N. Provide and perform x-ray / radiographic) testing reports to owner and authorities having jurisdiction. Submit result to owner. Provide assistance for all required special inspections.

O. Operation and Maintenance Data: For valves, safety valves, pressure-reducing valves, steam traps, air vents, vacuum breakers, and meters to include in emergency, operation, and maintenance manuals.

1.08 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section, with minimum _____ years of documented experience.

C. Welder Qualifications: Certified in accordance with ASME BPVC-IX.

D. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code - Steel."

E. Pipe Welding: Qualify processes and operators according to the following:
   1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

F. ASME Compliance: Comply with ASME B31.1, "Power Piping and ASME B31.9, "Building Services Piping" for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp flash tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1

G. Steel Pipe Welding:
   1. Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, “Welding and Brazing Qualifications.”
   2. Welders shall be qualified for all required pipe sizes, material, wall thickness, and position in accordance with the American Society of Mechanical Engineering (ASME) Section IX, boiler and pressure Vessel Code
   3. Welder qualification testing shall be performed by an independent inspection agency listed with the Agency Having Jurisdiction for testing that is by radiography. The inspector shall have a minimum radiography qualification of level II in accordance with the American Society for Non-Destructive Testing, 3200 Riverside Drive, Columbus, Ohio 43221. Recommended Practice, Document No. SNT-TC-1A-1980.
   4. Copies of the certified welder qualification reports shall be maintained by the responsible welding agency and the company performing the welding, and shall be submitted to the owner and/or Inspector upon request.
   5. All defective welds shall be chipped out and repaired at no cost to the Owner, based on procedure to be specified at the time.
   6. The contractor shall bear the cost of reinspection of the repaired welds and the inspection of two (2) additional welds, as selected by the owner, for each failed weld.
   7. Field Procedures:
      a. Clean pipe free from rust, scale and oxide.
      b. Bevel pipe on each end per acceptable procedures.
      c. Contractor is responsible for preparation of pipe in accordance with ASME B 31.1, Chapter V and for visual inspection during the welding operation and for all required welding examinations with certified welding inspector(s), in accordance with ANSI/AWS B.1.10-86 or latest issue section 3.1, 3.1.1, 3.1.2, and 3.1.3.

H. Radiographic examination.
1. All welds shall be full fusion and penetration, and be subjected to radiographic testing as follows:
a. Perform radiographic examination of butt welds in high pressure steam piping and condensate. Testing shall be performed by an independent lab hired by this contractor, submit results to owner.
b. Test welds as follows:
1) Below 90 PSIG - none
2) 90 PSIG to 150 PSIG - Test 10 percent at random
3) Above 150 PSIG - Test 100 percent
4) Testing shall be performed by an independent lab hired by this contractor, submit results to owner.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labelling in place. Inspect for damage.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

PART 2 PRODUCTS

2.01 REGULATORY REQUIREMENTS

A. Comply with ASME B31.9 and ASME B31.1 code for installation of piping system.

B. Provide certificate of compliance from Authority Having Jurisdiction indicating approval of welders.

C. Welding Materials and Procedures: Comply with ASME BPVC-IX and applicable state labor regulations.

2.02 STEEL PIPE AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel, plain ends, Type, Grade, and Schedule as indicated in Part 3 piping applications articles.

B. Malleable-Iron Threaded Fittings: ASME B16.3; Classes 150 and 300 as indicated in Part 3 piping applications articles.

C. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3 piping applications articles.

D. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.

E. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
1. Material Group: 1.1.
2. End Connections: Butt welding.
3. Facings: Raised face.

F. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, black steel of same Type, Grade, and Schedule as pipe in which installed.

2.03 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

c. For high pressure steam and condensate - Balforon “C” as manufactured by Balfor Industries, Inc ONLY
d. For low pressure steam and condensate - Klinger C4430
e. For joints of dissimilar metals, provide isolating gaskets, sleeves and washers between flanges, bolts and nuts. Gaskets shall be similar to Dupont Teflon.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Welding Filler Metals: Comply with AWS D10.12 (AWS D10.12M) for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

D. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.

2.04 STAINLESS STEEL PIPE:

A. Up to 15 psig including condensate: ASTM A312/A312M, Type TP304L, seamless only, Schedule 40S for pipe less than 8 inches in diameter or Schedule 30S for pipe 8 inches and larger. Maximom 0.375 inch wall thickness.

B. Fittings 2-1/2 inches and Larger:
1. Stainless steel, buttweld type.
2. ASTM A403/A403M, Class WP-S, Grade WP 304L, seamless only, and ASME B16.9 of the same thickness as the adjoining pipe.

C. Fittings 2 inches and Smaller:
1. Stainless steel, socket weld type.
2. Comply with ASME B16.11 and ASTM A182/A182M.

2.05 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Capitol Manufacturing Company.
b. Central Plastics Company.
c. Hart Industries, International Inc.
d. Watts Water Technologies, Inc.
e. Zurn Plumbing Products Group.
2. Factory-fabricated union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).

D. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Capitol Manufacturing Company.
b. Central Plastics Company.
c. Watts Water Technologies, Inc..
2. Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

E. Dielectric-Flange Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Central Plastics Company.
d. Pipeline Seal and Insulator, Inc.

2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

2.06 STRAINERS

A. Y-Pattern Strainers:
1. Low pressure steam, low pressure condensate and pumped condensate systems of steel construction 15 psig and below:
a. Working pressure: To 250 psig wsp @ 406°F. Sizes 1/4 inch to 2 inches: ANSI 250 lb Class:
1) Connections: Threaded.
2) Body:
(a) Cast iron, ASTM A 126, Class B.
(b) With machined seat for screen retention.
(c) Galvanized as required to match connecting piping.
3) Cover: Cast iron gasketed.
4) Screen:
(a) 3/64 inch perforations.
(b) 304 stainless steel, ASTM 240.
(c) Free area not less than 2.5 times inlet area.
5) Blowoff outlet: With female MPT tapping.
6) Mueller Model No. 11 BC.
b. Working pressure: For sizes 2-1/2 inches to 12 inches: To 250 psig wsp @ 450°F. For sizes 14 inches to 24 inches: To 200 psig wsp @ 406°F.
1) Connections: Flanged.
2) Body:
(a) Cast iron, ASTM A 126, Class B.
(b) With machined seat for screen retention.
(c) Galvanized as required to match connecting piping.
3) Cover flange:
(a) Cast iron, ASTM A 126, Class B.
(b) With machined seat for screen retention.
(c) With female tapped NPT blowoff connection.
(d) With EPDM o-ring seal.
4) Screen:
(a) To 8 inches: 3/64 inch perforations.
(b) 10 inches and larger: 1/16 inch perforations.
(c) 304 stainless steel, ASTM 240.
(d) Free area not less than 2.5 times inlet area.
5) Blowoff outlet: With female NPT tapping.
6) Mueller Model No. 752,

2.07 PIPE HANGERS AND SUPPORTS

A. Provide hangers and supports that comply with MSS SP-58.
1. If type of hanger or support for a particular situation is not indicated, select appropriate type using MSS SP-58 recommendations.

B. Hangers for Pipe Sizes 2 to 4 Inches: Carbon steel, adjustable, clevis.

C. Hangers for Pipe Sizes 6 Inches and Over: Adjustable steel yoke, cast iron roll, double hanger.

D. Multiple or Trapeze Hangers for Pipe Sizes to 4 inches: Steel channels with welded spacers and hanger rods.

E. Multiple or Trapeze Hangers for Pipe Sizes 6 Inches and Over: Steel channels with welded spacers and hanger rods; cast iron roll and stand.

F. Wall Support for Pipe Sizes to 3 Inches: Cast iron hook.

G. Wall Support for Pipe Sizes 4 to 5 Inches: Welded steel bracket and wrought steel clamp.

H. Wall Support for Pipe Sizes 6 Inches and Over: Welded steel bracket and wrought steel clamp; adjustable steel yoke and cast iron roll.

I. Vertical Support: Steel riser clamp.

J. Floor Support for Pipe Sizes to 4 Inches: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

K. Floor Support for Pipe Sizes 6 Inches and Over: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.

L. Hanger Rods: Mild steel threaded both ends, threaded one end, or continuous threaded.

M. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.08 THERMOSTATIC AIR VENTS AND VACUUM BREAKERS

A. Thermostatic Air Vents:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Armstrong International, Inc.
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.
2. Body: Cast iron, bronze or stainless steel.
3. End Connections: Threaded.
4. Float, Valve, and Seat: Stainless steel.
5. Thermostatic Element: Phosphor bronze bellows in a stainless-steel cage.
6. Maximum allowable Pressure: : 125 psig.
7. The maximum operating pressure is to be selected for the intended service.
8. Maximum Temperature Rating: 350 F.

B. Vacuum Breakers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Armstrong International, Inc.
   b. Hoffman Specialty; Division of ITT Industries.
   c. Spirax Sarco, Inc.
2. Body: Cast iron, bronze, or stainless steel.
3. End Connections: Threaded.
4. Sealing Ball, Retainer, Spring, and Screen: Stainless steel.
5. O-ring Seal: EPR.
6. Pressure Rating: 125 psig.
7. Maximum Temperature Rating: 350 F.

2.09 PIPE FLANGE GASKET MATERIALS

A. Flange gaskets shall be one-piece ring type 1/16 inch thick (minimum) except as noted, suitable for temperature, pressure (operating and test) and service of system.
1. For low pressure steam and condensate - Klinger C4430
2. For joints of dissimilar metals, provide isolating gaskets, sleeves and washers between flanges, bolts and nuts. Gaskets shall be similar to Dupont Teflon.
3. Full-Face Type: For flat-face, Class 125, cast iron and cast bronze flanges.
4. Narrow Face Type: For raised face, class 250, cast iron flanges.

2.10 RING SPACERS AND TEST BLANKS:

A. Provide between flanges where shown on drawing or where necessary to isolate equipment from the piping system, in accordance with B 3.1.1, Chapter VI, section 137.2.4. Ring spacers

to be replaced by test blanks during hydrostatic testing and/or during chemical cleaning for equipment isolation.

B. Size and rating to match companion flanges.

PART 3 EXECUTION

3.01 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. Keep open ends of pipe free from scale and dirt. Whenever work is suspended during construction protect open ends with temporary plugs or caps.

E. After completion, fill, clean, and treat systems. Refer to Section 232500.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Route piping in orderly manner, plumb and parallel to building structure, and maintain gradient.

C. Install piping to conserve building space and avoid interference with use of space.

D. Sleeve pipe passing through partitions, walls, and floors.

E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

F. Pipe Hangers and Supports:
   1. Install in accordance with ASME B31.9.
   2. Support horizontal piping as indicated.
   3. Place hangers within 12 inches of each horizontal elbow.
   4. Use hangers with 1-1/2 inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
   5. Support vertical piping at every other floor. Support riser piping independently of connected horizontal piping.
   6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.
   7. Prime coat exposed steel hangers and supports. Refer to Section 09 9123. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
   8. Install the following pipe attachments:
      a. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet (6 m) long.
      b. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet (6 m) or longer.
      c. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet (6 m) or longer, supported on a trapeze.
      d. Spring hangers to support vertical runs.
   9. Vertical piping:
      a. Base elbow support: Provide bearing plate on structural support, similar to F&S Manufacturing Co. Fig. 720 or 721.
      b. Provide guides at every third floor but not exceed:
      c. 25 ft for piping to 2 inch.
      d. 36 ft for piping 2-1/2 inch to 12 inch.
      e. 50 ft for piping 14 inch and larger.
      f. Top support: Provide special hanger or saddle in horizontal connection and make provisions for expansion.
      g. Intermediate supports: Steel pipe clamp at floor. Bolt and weld to pipe with extension ends bearing on structural steel or bearing plates.

h. For multiple pipes, coordinate guides, bearing plates and accessory steel.

G. Provide clearance for installation of insulation and access to valves and fittings.

H. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 08 3100.

I. Slope steam piping one inch in 40 feet in direction of flow. Use eccentric reducers to maintain bottom of pipe level.

J. Slope steam condensate piping one inch in 40 feet. Provide drip trap assembly at low points and before control valves. Run condensate lines from trap to nearest condensate receiver. Provide loop vents over trapped sections.

K. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.

L. Install valves with stems upright or horizontal, not inverted.

3.03 PIPE JOINT CONSTRUCTION

A. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

B. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.

C. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints: Construct joints according to AWS D10.12 (AWS D10.12M), using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

E. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.04 TERMINAL EQUIPMENT CONNECTIONS

A. Size for supply and return piping connections shall be the same as or larger than equipment connections.

B. Install traps and control valves in accessible locations close to connected equipment.

C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

D. Install vacuum breakers downstream from control valve, close to coil inlet connection.

E. Install ports for pressure and temperature gages at coil inlet connections.

F. Install a drip leg at coil outlet.

G. Equipment piping and connections: Provide steam, condensate return, drip and vent piping connections as noted and as recommended by equipment manufacturer. Verify location, number and size of connections.

3.05 FIELD QUALITY CONTROL

A. Prepare steam and condensate piping according to ASME B31.1, "Power Piping" and ASME B31.9, "Building Services Piping," and as follows:
   1. Leave joints, including welds, uninsulated and exposed for examination during test.
   2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
   3. Flush system with clean water. Clean strainers.
   4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.

B. Perform the following tests on steam and condensate piping:

1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength.
3. After hydrostatic test pressure has been applied for at least 4 hours, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks
4. Perform radiographic examination of butt welds in high pressure steam piping and condensate piping .

C. Prepare written report of testing.

3.06 STEAM PIPING APPLICATIONS

A. Low pressure steam system, 15 psig or below:
   1. Material shall be steel in accordance with ASTM A53 Grade B seamless.
   2. Wall thickness shall be:
      a. To 2 inch: Schedule 80 with threaded ends, or Schedule 40 with socket weld ends.
      b. 2-1/2 inch to 10 inch: Schedule 40, butt weld ends only.
      c. 12 inch to 24 inch: 0.375 inch wall thickness, butt weld ends only.

B. Low pressure condensate return system, below 15 psig:
   1. Material shall be steel in accordance with ASTM A53 Grade B seamless.
   2. Wall thickness shall be:
      a. To 2 inch: Schedule 80 with threaded ends, or Schedule 40 with socket weld ends.
      b. 2-1/2 inch to 10 inch: Schedule 40, butt weld ends only.
      c. 12 inch and larger: 0.375 wall thickness, butt weld ends only.

C. Pumped condensate return system:
   1. Material shall be steel in accordance with ASTM A53 Grade B seamless.
   2. Wall thickness shall be:
      a. To 2 inch: Schedule 80 with threaded ends, or Schedule 80 with socket weld ends.
      b. 2-1/2 inch to 10 inch: Schedule 40, butt weld ends only.

3.07 ANCILLARY PIPING APPLICATIONS

A. Air-Vent Piping:
   1. Inlet: Same as service where installed.
   2. Outlet: Type K annealed-temper copper tubing with soldered or flared joints.

B. Vacuum-Breaker Piping: Outlet, same as service where installed.

C. Safety-Valve-Inlet and -Outlet Piping for jurisdictions utilizing IMC 2018 and later: Same materials and joining methods as for piping specified for the service in which safety valve is installed. Steel piping shall be galvanized. Each relief valve shall be separately piped. Systems in excess of 15 psig shall be piped to the outside

3.08 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Use indicated piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping free of sags and bends.

G. Install fittings for changes in direction and branch connections.

H. Install piping to allow application of insulation.

I. Select system components with pressure rating equal to or greater than system operating pressure.

J. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

K. Install drains, consisting of a tee fitting, NPS 3/4 (DN 20) full port-ball valve, and short NPS 3/4 (DN 20) threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.

L. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.

M. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.

N. Reduce pipe sizes using eccentric reducer fitting installed with level side down.

O. Install branch connections to mains using tee fittings in main pipe, with the branch connected to top of main pipe.

P. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."

Q. Install unions in piping, NPS 2 (DN 50) and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.

R. Install flanges in piping, NPS 2-1/2 (DN 65) and larger, at final connections of equipment and elsewhere as indicated.

S. Install strainers on supply side of control valves, pressure-reducing valves, traps, and elsewhere as indicated. Install NPS 3/4 (DN 20) nipple and full port ball valve in blowdown connection of strainers NPS 2 (DN 50) and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2 (DN 50).

T. Install expansion loops, anchors, and pipe alignment guides as specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."
   1. Install piping to permit free expansion and contraction without damaging piping, equipment, or construction.
   2. Provide expansion offsets, expansion loops, anchors, guides and supports to permit expansion, within stress limits of ANSI Code for Pressure Piping for temperature range of 40 deg F to minimum of 20 deg F above maximum system temperature.
      a. Steam piping shall be cold-sprung.
         1) Piping up to 1-1/2 inch: Cold-sprung 100 percent of expansion.
         2) Piping 2 inch and larger: Cold-sprung 50 percent of expansion.
   3. Install anchors and guides on both sides of expansion loops, zees, etc., to provide safe installation and trouble-free operation

U. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."

V. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.
   1. Drips: Provide as follows:
      a. Steam piping:
         1) Maximum 75 foot intervals.
         2) At bottom of vertical lines.
         3) At rising points in piping.
   2. Provide drain valves where condensate may be pocketed.

3. Provide drip points with dirt pockets, the same size as piping, with removable caps. Welded piping shall have ends with flange. Screwed piping shall have caps screwed, made up with graphite.
4. Dirt pockets; Provide full size of riser, 12 inches long at bottom of each riser, end of mains, ends of headers, ahead of pressure regulators, control valves, isolation valves, changes of direction, pipe loops, expansion joints, and as noted
5. Connect drips to condensate return and refer to drip detail.
6. Pitch steam, condensate return and drip piping for gravity drainage.

W. Provide three elbow type swing joints on steam and condensate return connections to equipment and piping systems.

X. Provide riser shutoff valves in runout to each steam and condensate return riser.

Y. Install ring spacers and test blanks as required for hydrostatic testing

3.09 SCHEDULES

A. Hanger Spacing for Steel Steam Piping.
1. 3/4 inch and 1 inch: Maximum span, 9 feet; minimum rod size, 1/4 inch.
2. 1-1/4 inches: Maximum span, 11 feet; minimum rod size, 3/8 inch.
3. 1-1/2 inches: Maximum span, 12 feet; minimum rod size, 3/8 inch.
4. 2 inches: Maximum span, 13 feet; minimum rod size, 3/8 inch.
5. 2-1/2 inches: Maximum span, 14 feet; minimum rod size, 3/8 inch.
6. 3 inches: Maximum span, 15 feet; minimum rod size, 3/8 inch.
7. 4 inches: Maximum span, 17 feet; minimum rod size, 1/2 inch.
8. 6 inches: Maximum span, 21 feet; minimum rod size, 1/2 inch.
9. 8 inches: Maximum span, 24 feet; minimum rod size, 5/8 inch.

B. Hanger Spacing for Steel Steam Condensate Piping.
1. 1/2 inch, 3/4 inch, and 1 inch: Maximum span, 7 feet; minimum rod size, 1/4 inch.
2. 1-1/4 inches: Maximum span, 8 feet; minimum rod size, 3/8 inch.
3. 1-1/2 inches: Maximum span, 9 feet; minimum rod size, 3/8 inch.
4. 2 inches: Maximum span, 10 feet; minimum rod size, 3/8 inch.
5. 2-1/2 inches: Maximum span, 11 feet; minimum rod size, 3/8 inch.
6. 3 inches: Maximum span, 12 feet; minimum rod size, 3/8 inch.
7. 4 inches: Maximum span, 14 feet; minimum rod size, 1/2 inch.
8. 6 inches: Maximum span, 17 feet; minimum rod size, 1/2 inch.
9. 8 inches: Maximum span, 19 feet; minimum rod size, 5/8 inch.

END OF SECTION 232213

SECTION 232214
STEAM AND CONDENSATE HEATING SPECIALTIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Steam traps.

B. Steam air vents.

C. Vacuum breakers

D. Steam safety valves.

1.02 RELATED REQUIREMENTS

A. Section 230716 - HVAC Equipment Insulation.

B. Section 230719 - HVAC Piping Insulation.

C. Section 232213 - Steam and Condensate Heating Piping.

1.03 REFERENCE STANDARDS

A. ASME BPVC-VIII-1 - Boiler and Pressure Vessel Code, Section VIII, Division 1: Rules for Construction of Pressure Vessels 2023.

B. ASME B31.9 - Building Services Piping 2020.

C. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 DEFINITIONS

A. HP Systems: High-pressure piping operating at more than 15 psig (104 kPa) as required by ASME B31.1.

B. LP Systems: Low-pressure piping operating at 15 psig (104 kPa) or less as required by ASME B31.9

C. Below atmosphere Vacuum return piping is piping operating below 0 PSIG up to 29 inches of mercury.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data:
   1. Provide for all manufactured products and assemblies required for this project.
   2. Include product description, model, dimensions, component sizes, rough-in requirements, service sizes, and finishes.
   3. Submit schedule indicating manufacturer, model number, size, location, rated capacity, load served, and features for each specialty.
   4. Include electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Indicate application, selection, and hookup configuration. Include pipe and accessory elevations.

D. Operation and Maintenance Data: Include installation instructions, servicing requirements, and recommended spare parts lists.

E. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Pump Seals: One set for each type and size of pump.
   3. Steam Trap Service Kits: One for each type and size.

1.06 QUALITY ASSURANCE

A. Perform Work in accordance with State of New Jersey standard for installation of boilers and pressure vessels.
   1. Maintain one copy of each document on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum three years of documented experience.

1.07 SHORT CIRCUIT CURRENT RATING:

A. All electrical equipment, starters and controller assemblies shall be provided with short circuit rating as follows:
   1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.
   2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
   3. Label equipment utilizing series ratings as required by NFPA 70.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

B. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

C. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

1.09 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Gaskets: Furnish replacement gasket(s) for each gasketed opening.

PART 2 PRODUCTS

2.01 STEAM TRAPS

A. Manufacturers:
   1. Armstrong International, Inc; _____: www.armstronginternational.com.
   2. Spirax-Sarco; _____: www.spiraxsarco.com/us.
   3. Hoffman Specialty; Division of ITT Industries.
   4. Barnes & Jones, Inc.

B. Steam Trap Applications:
   1. Use Float and Thermostatic Traps for:
      a. Unit heaters.
      b. Converters.
      c. Heating coils.
      d. Flash tanks.
      e. Steam jacketed equipment.
      f. Direct steam injected equipment.
      g. Main headers.
      h. Branch lines.
   2. Use Inverted Bucket Steam Traps for:
      a. Main headers.
      b. Steam jacketed equipment.
      c. Direct steam injected equipment.

C. Steam Trap Performance:
   1. Select to handle minimum of two times maximum condensate load of apparatus served.
   2. Pressure Differentials:
      a. Low Pressure Systems (5 psi and less): 1/4 psi.
      b. Medium Pressure Steam (25 psi maximum): 5 psi.
      c. High Pressure Steam (100 psi maximum): 30 psi.

D. Inverted Bucket Traps:
   1. Body and Cap: Cast iron.
   2. End Connections: Threaded.

3. Head and Seat: Stainless steel.
4. Valve Retainer, Lever, and Guide Pin Assembly: Stainless steel.
5. Bucket: Stainless steel.
6. Strainer: Integral stainless-steel inlet strainer within the trap body.
7. Air Vent: Stainless-steel thermostatic vent.
8. Maximum allowable Pressure: 250 psig (1725 kPa).
9. The maximum operating pressure is to be selected for the intended service.

E. Float and Thermostatic Traps:
1. Body and Bolted Cap: ASTM A 126, cast iron.
2. End Connections: Threaded.
3. Float Mechanism: Replaceable, stainless steel.
4. Head and Seat: Hardened stainless steel.
5. Trap Type: Balanced pressure.
6. Thermostatic Bellows: Monel.
7. Thermostatic air vent capable of withstanding 45 deg F (25 deg C) of superheat and resisting water hammer without sustaining damage.
8. Vacuum Breaker: Thermostatic with phosphor bronze bellows, and stainless steel cage, valve, and seat.
9. Maximum allowable Pressure: 125 psig (860 kPa) up to 450 deg F.
10. The maximum operating pressure is to be selected for the intended service.

2.02 STEAM AIR VENTS

A. Manufacturers:
1. Armstrong International, Inc; _____: www.armstronginternational.com.
2. Bell and Gossett, a xylem brand; _____: www.bellgossett.com.
3. Spirax-Sarco; _____: www.spiraxsarco.com/us.

B. 125 psi WSP: Balanced pressure type; cast brass body and cover; access to internal parts without disturbing piping; stainless steel bellows, stainless steel valve and seat.

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Install steam and steam condensate piping and specialties in accordance with ASME B31.9.

B. Install pumps according to HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation."

C. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.

D. Support pumps and piping separately so piping is not supported by pumps.

E. Install pumps on concrete bases with grouted base frame. Anchor pumps to bases using inserts or anchor bolts.

F. Install thermometers and pressure gages.

G. Steam Traps:
1. Provide minimum 3/4 inch size on steam mains and branches.
2. Install with union or flanged connections at both ends.
3. Provide gate valve and strainer at inlet, and gate valve and check valve at discharge.
4. Provide minimum 10 inch long, line size dirt pocket between apparatus and trap.

H. Rate relief valves for pressure upstream of pressure reducing station, for full operating capacity. Set relief at maximum 20 percent above reduced pressure.

I. Terminate relief valves to outdoors. Provide drip pan elbow with drain connection to nearest floor drain.

J. When several relief valve vents are connected to a common header, header cross section area shall equal sum of individual vent outlet areas.

K. Install piping adjacent to machine to allow service and maintenance.

L. Install check valve, and ball valve at pump discharge connections for each electric-driven pump.

M. Pipe drain to nearest floor drain for overflow and drain piping connections.

N. Install full-size vent piping to outdoors, terminating in 180-degree elbow at point above highest steam system connection or as indicated.

O. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

P. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.02 CONNECTIONS

A. Steam and condensate piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect steam and condensate piping to tank tappings with shutoff valves and unions or flanges at each connection.

C. Connect condensate drains, pump-discharge piping, vents, overflow drains, makeup water, steam supply, and cooling water piping.

3.03 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Perform tests and inspections and prepare test reports.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:
   1. Inspect field-assembled components and equipment installation, including piping and electrical connections, for compliance with requirements.
   2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
   3. Verify bearing lubrication.
   4. Verify proper motor rotation.
   5. Test Reports: Prepare a written report to record the following:
      a. Test procedures used.
      b. Test results that comply with requirements.
      c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

D. Remove and replace malfunctioning equipment and retest as specified above.

3.04 STEAM-TRAP INSTALLATION

A. Install steam traps in accessible locations as close as possible to connected equipment.

B. Install full-port ball valve, strainer, and union upstream from trap; install union, check valve, and full-port ball valve downstream from trap unless otherwise indicated.

END OF SECTION 232214

SECTION 232500
HVAC WATER TREATMENT

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Materials.
   1. System cleaner.
   2. Closed system treatment (water).
   3. Steam system treatment.

B. By-pass (pot) feeder.

C. Drip feeder.

D. Solution metering pump.

E. Solution tanks.

F. Agitator.

G. Liquid level switch.

H. Conductivity controller.

I. Water meter.

J. Solenoid valves.

K. Timers.

L. Water softeners.

M. Test equipment.

N. Side-stream filtration equipment.

O. HVAC water treatment chemicals

P. Glycol feeder makeup package

1.02 RELATED REQUIREMENTS

A. Section 011000 - Summary: Owner furnished treatment equipment.

B. Section 016000 - Product Requirements: Owner furnished treatment equipment.

C. Section 230913 - Instrumentation and Control Devices for HVAC.

D. Section 232113 - Hydronic Piping.

E. Section 232114 - Hydronic Specialties.

F. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. FM (AG) - FM Approval Guide Current Edition.

B. ITS (DIR) - Directory of Listed Products Current Edition.

C. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL (DIR) - Online Certifications Directory Current Edition.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide chemical treatment materials, chemicals, and equipment including electrical characteristics and connection requirements.

C. Shop Drawings: Indicate system schematic, equipment locations, and controls schematics, electrical characteristics and connection requirements.

D. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
   1. Bypass feeders.
   2. Water meters.
   3. Inhibitor injection timers.
   4. pH controllers.
   5. TDS controllers.
   6. Biocide feeder timers.
   7. Chemical solution tanks.
   8. Injection pumps.
   9. Chemical test equipment.
   10. Chemical material safety data sheets.
   11. Water softeners.
   12. RO units.
   13. Multimedia filters.
   14. Self-cleaning strainers.
   15. Bag- or cartridge-type filters.
   16. Centrifugal separators.

E. Manufacturer's Installation Instructions: Indicate placement of equipment in systems, piping configuration, and connection requirements.

F. Manufacturer's Field Reports: Indicate start-up of treatment systems when completed and operating properly. Indicate analysis of system water after cleaning and after treatment.

G. Certificate: Submit certificate of compliance from Authority Having Jurisdiction indicating approval of chemicals and their proposed disposal.

H. Project Record Documents: Record actual locations of equipment and piping, including sampling points and location of chemical injectors.

I. Operation and Maintenance Data: Include data on chemical feed pumps, agitators, and other equipment including spare parts lists, procedures, and treatment programs. Include step by step instructions on test procedures including target concentrations.

J. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Sufficient chemicals for treatment and testing during required maintenance period.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience. Company shall have local representatives with water analysis laboratories and full time service personnel.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum _____ years of experience and approved by manufacturer.

1.06 SHORT CIRCUIT CURRENT RATING:

A. All electrical equipment, starters and controller assemblies shall be provided with short circuit rating as follows:
   1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.
   2. Provide controllers with listed short circuit current rating not less than the available fault current at the installed location as determined by short circuit study performed in accordance with Section 260573.
   3. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
   4. Label equipment utilizing series ratings as required by NFPA 70.

1.07 MAINTENANCE SERVICE

A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion, scale formation, and biological growth for cooling, chilled-water piping, heating, hot-water piping, heating, steam and condensate piping, condenser-water piping, and steam and condensate system for humidifier and cooking appliance applicationsheating, hot-water pipingheating, steam and condensate piping condenser-water piping steam and condensate system for humidifier and cooking appliance applications and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion, and shall include the following:

B. Initial water analysis and HVAC water-treatment recommendations.

C. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.

D. Periodic field service and consultation.

E. Customer report charts and log sheets.

F. Laboratory technical analysis.

G. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. AmSolv-Amrep, Inc; _____: www.amsolv.com.

B. GE Water & Process Technologies; _____: www.gewater.com.

C. Nalco, an Ecolab Company; _____: www.nalco.com.

D. Substitutions: See Section 016000 - Product Requirements.

2.02 REGULATORY REQUIREMENTS

A. Comply with applicable codes for addition of non-potable chemicals to building mechanical systems and to public sewage systems.

B. Comply with UL (DIR) requirements.

C. Perform work in accordance with local health department regulations.

D. Provide certificate of compliance from Authority Having Jurisdiction indicating approval of installation.

2.03 GENERAL REQUIREMENTS

A. A single water treatment company shall provide all products and serviced for undivided responsibility throughout the warranty period.

B. The water treatment company shall be a recognized specialist in the field of industrial water treatment for a minimum of ten (10) years.

C. The water treatment company shall have knowledgeable and experienced personnel on staff who are chemical engineers or chemists and have been in the field of industrial water treatment for over ten (10) years.

D. The water treatment company shall have a well-equipped laboratory managed by qualified personnel.

E. All products furnished shall be proven reliable and have good proven performances.

2.04 MATERIALS

A. CHEMICALS
   1. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment.

B. Manufacturers:
   1. GE Water & Process Technologies; _____: www.gewater.com.
   2. Nalco, an Ecolab Company; _____: www.nalco.com.

3. Chemtreat

C. System Cleaner:
   1. Manufacturers:
      a. GE Water & Process Technologies; _____: www.gewater.com.
      b. Nalco, an Ecolab Company; _____: www.nalco.com.
      c. Chemtreat
      d. Substitutions: See Section 016000 - Product Requirements.
   2. Liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products; sodiumtripoly phosphate and sodium molybdate.
   3. Biocide chlorine release agents such as sodium hypochlorite or calcium hypochlorite or microbiocides such as quarternary ammonia compounds, tributyltin oxide, methylene bis (thiocyanate).

D. Chilled water and hot water systems, treatment shall be as follows:
   1. For pH range, refer to Treatment Schedule at end of this section.
   2. Mixture of Molybdate, Silicate, Polymeric dispersant and Tolytriazole or equivalent non-ferrous inhibitor, maintaining minimum concentration as noted in Treatment schedule at end of this section. The inhibitor shall maintain corrosion of steel and copper below 2 mils per year and 0.2 mils per year respectively.
   3. Non-oxidizing, non-acidic and non-cationic biocide, glutaraldhyde or approved equal, to control total bacteria count below 1000 colonies per ml.
   4. Preliminary work required, but is not limited to:
      a. Refer to the drawing for additional information and clarification
      b. Provide a training manual to include operating and maintenance procedures on equipment, chemical control limits, material safety data sheets, lay-up and start-up procedures.
      c. All steps in the following cleaning and treatment procedures must be accomplished in immediate succession with no delay. Provide overtime manpower to accomplish same.
      d. Leave all valve trains in place and open for cleaning and treatment procedures and hydrostatic testing.
      e. Install drain outlets at deadends, low points and heat exchangers.
      f. Insert temporary wire screens of 140 microns or 9/64 inch perforations at chiller inlets. Use a 50 micron bag in the sidestream bag filter.
   5. Preliminary cleaning procedures:
      a. Remove all extraneous loose debris, construction material, trash and dirt from piping, filters and all equipment. Remove as much dry material as possible, for this material prevents protective coating transfer to hard to reach portions of the system.
      b. Flush water fill line separately to drain. If a new water line has been installed, be sure that rust and debris from it is not washed into the system.
      c. Fill the system piping and equipment with water and recirculate for one with the temporary bypasses at open positions.
      d. Turn on direct make-up and begin blowing down deadends, low points and y-strainers until water runs “city-water clean” as fast as make-up will allow.
      e. Remove all screens and strainers, clean and replace. Flush all temporary bypasses.
      f. Add alkaline, non-foaming, non-chlorinated detergent disinfectant plus non-foaming wetting agent to remove cutting oil, excess pipe joint compound, fine solids and other materials at a dosage of 5 lbs per 100 gallons of system water.
      g. Recirculate for 4 to 8 hours.
      h. Turn on direct make-up and begin flushing all drain outlets, y-strainers, deadends and bypasses until water meets the following parameters: Iron levels within 1 ppm, conductivity within 10 mmhs, orthophosphate within 1 ppm and turbidity within 1 FTU.
      i. Isolate tower basins to carry out vacuuming and power spray washing of tower interior. Immediately begin the “pretreatment procedure”.
   6. Pretreatment procedure:

a. Fill the system piping and equipment with water while adding non-foaming, water-based lay-up inhibitors to protect the piping as per chemical manufacturer's recommended dosage.
b. Recirculate for 2 hours. All heat exchangers and condensers must be off-line and with no heat load.
c. Stop the pumps and secure the system for hydrostatic tests.
d. If the hydrostatic test fails, refill the system and begin pretreatment procedures again from step "g".
e. After successful completion of the hydrostatic test, disconnect all apparatus and secure the system for the resumption of the pretreatment procedure.
f. Begin flushing systems as fast as make-up will allow. Continue until water is "city water clean".
g. Remove all screens, strainers and temporary bypasses. Clean and replace screens and strainers immediately and begin the "passivation procedure".

7. Passivation Procedure
   a. Fill the system piping and equipment with water while adding TWICE the regular amount of the maintenance corrosion inhibitor into the water.
   b. Recirculate for 24-72 hours.
   c. Change the filter bag to a 10 micron high efficiency bag.
   d. Keep pressure differential across the bag filter less than 15 psig by washing or replacing the filter bag.
8. Initial chilled water and hot water system treatment:
   a. Install corrosion coupons and 5 micron, high-efficiency filter bag in the sidestream filter.
   b. Test water for corrosion inhibitor level. Add corrosion inhibitor if necessary to restore the regular control range.
   c. Add biocide per water treatment contractor's recommended dosage.
   d. Record make-up water meter reading.

E. Steam System Treatment:
1. Manufacturers:
   a. AmSolv-Amrep, Inc; _____: www.amsolv.com.
   b. GE Water & Process Technologies; _____: www.gewater.com.
   c. Nalco, an Ecolab Company; _____: www.nalco.com.
   d. _____.
   e. Substitutions: See Section 016000 - Product Requirements.
2. Preliminary work required includes, but is not limited to:
   a. All steps in the following treatment procedures must be accomplished in immediate succession with no delay. Provide overtime manpower to accomplish same.
   b. Install shut off ball valves at the horizontal headers for a temporary connection with hoses, recirculating pumps and tanks.
   c. Install vent and drain outlets at the temporary piping.
   d. Clean the piping with aqueous cleaning solutions first, followed with steam blowout.
3. Cleaning procedure:
   a. Remove all lose mill scale with circulation of plain city water at 3 ft per second or higher (300 gpm in the riser) for 15 minutes.
   b. Add a liquid alkaline inhibited chelate cleaner into the piping to create a 5% cleaning solution to remove old mill scale and rust.
   c. Cleaner shall contain erythorbate as a corrosion inhibitor, sodium gluconate and EDTA as chelates, non-foaming wetting agent and low molecular weight polymeric dispersant.
   d. Circulate cleaner for 4 to 8 hours. Test for residual chelate and corrosion inhibitor levels during circulation. Add additional cleaner if necessary to maintain he strength of the cleaner AT 5% and 200 ppm of erythorbate.
   e. Drain and flush the loop with city water until it meets the following parameters: Iron levels within 1 ppm, conductivity within 10 mmhs, orthophosphate within 1 ppm and

turbidity within 1 FTU.

4. Passivation procedure:
   a. Fill the temporary piping with water while adding alkaline silicate based passivator at an amount of half a gallon to 100 gallons.
   b. Recirculate the piping for 24 to 48 hours.
   c. Drain piping and begin cleaning new pipes with steam.

PART 3 EXECUTION

3.01 PREPARATION

A. Systems shall be operational, filled, started, and vented prior to cleaning. Use water meter to record capacity in each system.

B. Place terminal control valves in open position during cleaning.

C. Verify that electric power is available and of the correct characteristics.

3.02 CLEANING SEQUENCE

A. Concentration:
   1. As recommended by manufacturer.

B. Hot Water Heating Systems:
   1. Apply heat while circulating, slowly raising temperature to 160 degrees F and maintain for 12 hours minimum.
   2. Remove heat and circulate to 100 degrees F or less; drain systems as quickly as possible and refill with clean water.
   3. Circulate for 6 hours at design temperatures, then drain.
   4. Refill with clean water and repeat until system cleaner is removed.

C. Steam Systems:
   1. Apply heat, slowly raising boiler temperature to 160 degrees F and maintain for 12 hours minimum.
   2. Cool, then drain as quickly as possible.
   3. Refill with clean water, drain, refill and check for sludge.
   4. Repeat until system is free of sludge.
   5. Apply heat to produce steam for piping system and maintain for 8 hours minimum. Bypass traps and waste condensate.

D. Use neutralizer agents on recommendation of system cleaner supplier and approval of Architect.

E. Flush open systems and glycol filled closed systems with clean water for one hour minimum. Drain completely and refill.

F. Remove, clean, and replace strainer screens.

G. Inspect, remove sludge, and flush low points with clean water after cleaning process is completed. Include disassembly of components as required.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.04 STEAM SYSTEM TREATMENT

A. Provide bypass feeder on feed water line to each boiler.

B. Provide solution pumps to feed sequestering agent and base from solution tank into boiler. Provide minimum of one pump per boiler if treatment materials can be mixed. Provide agitator as required.

C. Provide solution pump to feed oxygen scavenger from solution tank into deaerator storage section. Provide pumps required to treat feed water. Provide agitator as required.

D. Provide solution pump to feed carbon dioxide neutralizer or filming amine from solution tank into steam header. Provide minimum of one pump per boiler. Provide agitator as required.

E. Activate solution pumps when feed water pumps are running.

F. Provide conductivity controller to sample boiler water and operate solenoid blowdown valve. Provide timer activated sampling with solenoid valve, balancing valve, and conductivity probe. Pipe to blowdown tank.

G. Provide 3/4 inch water coupon rack on each feed water pump with space for 4 test specimens.

H. Provide liquid level switch in each solution tank to deactivate solution pump and agitator and sound local alarm bell.

END OF SECTION 232500

SECTION 233100
HVAC DUCTS AND CASINGS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Metal ductwork.

B. Casings and plenums.

C. Duct cleaning.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 230593 - Testing, Adjusting, and Balancing for HVAC.

C. Section 230713 - Duct Insulation: External insulation and duct liner.

O. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Masonry 2018, with Editorial Revision (2020).

P. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements 2017, with Editorial Revision (2020).

Q. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements 2023.

R. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems 2024.

S. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible 2020.

T. SMACNA (LEAK) - HVAC Air Duct Leakage Test Manual 2012.

U. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Sheetmetal shop standards shall be compiled directly from the “SMACNA DUCT CONSTRUCTION STANDARDS- Metal and Flexible” SMACNA (DCS) manual. Modifications for a specific project, if any, shall be indicated directly on the SMACNA templates. Modified shop standards not taken directly from the SMACNA templates will not be accepted. Any deviations from SMACNA shall be noted.

C. Product Data: Provide data for duct materials, duct liner, and duct connections.

D. Shop Drawings: Indicate duct fittings, particulars such as gages, sizes, welds, and configuration prior to start of work for low pressure class and higher systems.

E. Test Reports: Indicate pressure tests performed. Include date, section tested, test pressure, and leakage rate, following SMACNA (LEAK).

F. Project Record Documents: Record actual locations of ducts and duct fittings. Record changes in fitting location and type. Show additional fittings used.

G. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from contractors for the items involved:
   1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
   2. Suspended ceiling components.
   3. Structural members to which duct will be attached.
   4. Size and location of initial access modules for acoustical tile.
   5. Penetrations of smoke barriers and fire-rated construction.
   6. Items penetrating finished ceiling including the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
      f. Perimeter moldings.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience, and approved by manufacturer.

B. Installer Qualifications: Company specializing in performing the type of work specified in this section, with minimum 5 years of documented experience.

C. Welding qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M for hangers and supports.
   2. AWS D1.2/D1.2M for aluminum supports.
   3. AWS D9.1/D9.1M for duct joint and seam welding.

D. NFPA Compliance:

1.06 FIELD CONDITIONS

A. Do not install duct sealants when temperatures are less than those recommended by sealant manufacturers.

B. Maintain temperatures within acceptable range during and after installation of duct sealants.

PART 2 PRODUCTS

2.01 DUCT ASSEMBLIES

A. Regulatory Requirements: Construct ductwork to comply with NFPA 90A standards.

B. Ducts: Galvanized steel, unless otherwise indicated.

C. Low Pressure Supply and Return: 2 inch w.g. pressure class, galvanized steel, seal class "C", leakage class 16 (rectangular) or Class 8 (round).

D. Medium and High Pressure Supply and Return: 6 inch w.g. pressure class, seal class " A", leakage class 4 (rectangular metal or Class 2 (round), galvanized steel. All supply ductwork from discharge of fans, air handling units or AC units to inlets of terminal boxes on floor, all return ductwork from each open inlet to suction of return fan, air handling unit or AC unit, all outdoor ductwork and all ductwork running through unconditioned spaces.

E. General Exhaust: 3 inch w.g. pressure class, galvanized steel, seal class "B" leakage class 8 (rectangular metal) or Class 4 (round).

F. Formed-on Transverse Joints (Flanges): Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible,"Traverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
   1. Use the following SMACNA Transverse (Girth) Joints
      a. Duct construction as follows for 2” w.g. class:
         1) Up to 12” wide use T-6 or T-7
         2) 13” to 28” wide use T-11 or T12
         3) 29” wide and up use TDC or TDF
      b. Duct construction as follows for 3” w.g. class:
         1) Up to 12” wide use T-6 or T-7
         2) 13” to 24” wide use T-11 or T12
         3) 25” wide and up use TDC or TDF
      c. Duct construction as follows for 6” w.g. class:
         1) Up to 12” wide use T-6 or T-7
         2) 13” to 18” wide use T-11 or T12
         3) 19” wide and up use TDC or TDF

G. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-5, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

H. Outside Air Intake: 4 inch w.g. pressure class, aluminum or stainless steel, watertight, within 10 feet of louvers, glavanized steel after..

I. Transfer Air and Sound Boots: 2 inch w.g. pressure class, ____.

J. All ductwork exposed to weather, except as noted shall be as follows: Stainless Steel and watertight.

K. Ductwork at duct humidifiers shall be as follows:
   1. Stainless steel.
   2. Watertight.
   3. Minimum 2 ft. upstream.
   4. Minimum 10 ft downstream.

2.02 MATERIALS

A. Galvanized Steel for Ducts: Hot-dipped galvanized steel sheet, ASTM A653/A653M FS Type B, with G90/Z275 coating.

B. Aluminum for Ducts: ASTM B209 (ASTM B209M); aluminum sheet, alloy 3003-H14. Aluminum Connectors and Bar Stock: Alloy 6061-T651 or of equivalent strength.

C. Stainless Steel for Ducts: ASTM A666, Type 316.

D. Joint Sealers and Sealants: Non-hardening, water resistant, mildew and mold resistant.
   1. Type: Heavy mastic or liquid used alone or with tape, suitable for joint configuration and compatible with substrates, and recommended by manufacturer for pressure class of ducts.
   2. Surface Burning Characteristics: Flame spread index of zero and smoke developed index of zero, when tested in accordance with ASTM E84.
   3. Manufacturers:
      a. Carlisle HVAC Products; Hardcast Versa-Grip 181 Water Based Fiber Reinforced Duct Sealant: www.carlislehvac.com.

2.03 DUCTWORK FABRICATION

A. Fabricate and support in accordance with SMACNA (DCS) and as indicated.

B. The following fitting connections and duct construction gauges are NOT acceptable
   1. Drive slip [T-1, T-2] fitting connections
   2. 26 gauge ductwork.

C. Fittings and/or joints of two different guages, connected joint rating shall meet more stringent conditions.

D. No variation of duct configuration or size permitted except by written permission. Size round duct installed in place of rectangular ducts in accordance with ASHRAE (FUND) Handbook - Fundamentals.

E. Provide duct material, gages, reinforcing, and sealing for operating pressures indicated.

F. Construct T's, bends, and elbows with radius of not less than 1-1/2 times width of duct on centerline.
   1. Where not possible and where rectangular elbows must be used, provide turning vanes as indicted in Section 233300 - Air Duct Accessories.
   2. Do not use "butt flange" straight taps or bull head tees.
   3. Saddle taps are NOT permitted.
   4. Divided flow branches can be conical Tees, Y-branch or reducing Y-branch Tees.

G. Increase duct sizes gradually, not exceeding 15 degrees divergence wherever possible; maximum 30 degrees divergence upstream of equipment and 45 degrees convergence downstream.

H. Fabricate continuously welded round and oval duct fittings in accordance with SMACNA (DCS).

I. Where ducts are connected to exterior wall louvers and duct outlet is smaller than louver frame, provide blank-out panels sealing louver area around duct. Use same material as duct, painted black on exterior side; seal to louver frame and duct.

J. Where ductwork is indicated to be exposed to view in occupied spaces, provide materials which are free from visual imperfections, including pittings, seam marks, stains, discolorations, and other imperfections. Provide finishes which will allow painting. Provide flat type seams and joints for all exposed duct construction

K. Watertight construction where noted with edges bent 1/2 inch for watertight seal. Longitudinal seam sealant shall be similar to 3M Brand No. 800; Alcoa, aluminastic Type C, or solder. Stiffeners shall be plug or spot welded. Transverse joints shall be bolted companion angles with 1/4 inch cadmium plated bolts with 6 inch minimum on centers and gasket.

L. Air tight construction where noted with longitudinal seams soldered. Stiffeners shall be plug or spot welded. Transverse joints shall be bolted companion angle with 1/4 inch cadmium plated bolts with 6 inch minimum on centers and gasket. Exposed, uninsulated ductwork shall be flush flat seam. Provide airtight concrete, masonry and other construction materials for plenums and shafts only where noted

2.04 MANUFACTURED DUCTWORK AND FITTINGS

A. Double Wall Insulated Flat Oval Ducts: Machine made spiral lockseam duct with solid Galvanized steel outer wall, solid galvanized steel inner wall; fittings with solid inner wall.
   1. For Outdoor locations and where indicated: Stainless Steel steel outer wall
   2. Manufacture in accordance with SMACNA (DCS).
   3. Fittings: Manufacture with solid inner wall.
   4. Insulation:
      a. Thickness: 2 inch fiberglass.
      b. Insulation K Value: 0.23 BTU x in./hr x sq.ft.x deg. F at 75 deg. F____.
      c. Insulation Density: 6 lb per cubic feet.
   5. Manufacturers:
      a. Lindab Inc.
      b. McGill Airflow LLC.
      c. SEMCO Incorporated.

B. Double Wall Insulated Round Ducts: Machine made round spiral lockseam duct with solid galvanized steel outer wall, solid galvanized steel inner wall; fitting with solid inner wall.
   1. For Outdoor locations and where indicated: Stainless Steel steel outer wall
   2. Manufacture in accordance with SMACNA (DCS).
   3. Insulation:
      a. Thickness: ___ inch.
      b. Material: Fiberglass.
      c. Insulation K Value: 0.23 BTU x in./hr x sq.ft.x deg. F at 75 deg. F____.
      d. Insulation Density: 6 lb per cubic feet.
   4. Manufacturers:
      a. Lindab Inc.
      b. McGill Airflow LLC.
      c. SEMCO Incorporated.

C. Double Wall Insulated Rectangular Ducts: Rectangular shop fabricated duct with galvanized steel outer wall, galvanized steel inner wall; fitting with solid inner wall.
   1. For Outdoor locations and where indicated: Stainless Steel steel outer wall
   2. Manufacture in accordance with SMACNA (DCS).
   3. Insulation:
      a. Thickness: 2 inch.
      b. Material: Fiberglass.
      c. Insulation K Value: 0.23 BTU x in./hr x sq.ft.x deg. F at 75 deg. F_____.
      d. Insulation Density: 6 lb per cubic feet.

D. Transverse Duct Connection System: SMACNA "E" rated rigidly class connection, interlocking angle and duct edge connection system with sealant, gasket, cleats, and corner clips in accordance with SMACNA (DCS).
   1. Manufacturers:
      a. Carlisle HVAC Products; Nexus Flange Connectors with Sealant Pocket: www.carlislehvac.com.
      b. Ductmate Industries, Inc, a DMI Company; _____: www.ductmate.com.
      c. Elgen Manufacturing Company, Inc; _____: www.elgenmfg.com.
      d. Substitutions: See Section 016000 - Product Requirements.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install, support, and seal ducts in accordance with SMACNA (DCS).

B. Duct sealing:
   1. Ductwork and all plenums in all pressure class ratings shall be constructed to Seal Class A.

2. All connections shall be sealed including, but not limited to spin-ins, taps, other branch connections, access doors, access panels and duct connections to equipment.
3. Openings for rotating shafts shall be sealed with bushings or other devices that seal off air leakage.
4. Pressure sensitive tape shall not be used as the primary sealant.unless it has been certified to comply with UL-181A or UL-181B by an independent testing laboratory and the tape is used in accordance with its listing.
5. Sealing that would void product listings is not required.
6. Spiral lock seams need not be sealed.

C. Hangers, Horizontal ducts:
1. To 2 sq ft in area: Provide galvanized steel strap hangers, minimum 1 inch x 1/8 inch, maximum 8 ft - 0 inch spacing.
2. 2 to 4 sq ft in area: Galvanized steel strap hangers, minimum 1 inch x 1/8 inch, maximum 8 ft 0 inch spacing.
   a. Strap hangers shall be bent 2 inch under the bottom corner of rectangular ducts. One screw shall secure 2 inch portion of hanger to bottom of duct. Straps shall be secured to side of duct with a minimum of two screws and more, as necessary, to provide a maximum screw spacing of 12 inch. Side-of-duct screws shall be located not more than 2 inch from top and bottom of duct.
3. 4 to 10 sq ft in area: Provide galvanized steel trapeze angles from steel threaded rods with a maximum 6 ft - 0 inch spacing.
4. Over 10 sq ft in area: Provide galvanized steel trapeze angles from steel threaded rods with a maximum 4 ft - 0 inch spacing.
5. Provide stronger support to match larger and heavier ducts; provide cross-bracing, angle iron hangers, as required for rigid and adequate supports.
6. In mechanical rooms: Provide black steel painted or galvanized, vertical angles or rods and horizontal angles across ductwork.

D. Hangers, Vertical ducts:
1. At each floor, provide minimum 2 supports per duct fastened to duct and spanning shaft opening. Fasten supports to floor or structural construction. Maximum screw spacing shall be 12 inch on center and maximum shall be four screw per riser.
2. Angles and channels: Provide painted black steel or galvanized. Where angles are specified, channels of equivalent strength, material and protective coating will be permitted. Where more than one duct is supported by a common set of angles, support size shall be determined by sum of width dimensions.
3. Supports: Provide as follows, except increase supports as required for load and span where span of angles exceed 6 ft or floor-to-floor height exceeds 14 ft.
   a. Duct width to 30 inch: Provide angle size: 1-1/4 inch x 1-1/4 inch x 1/8 inch.
   b. Duct width, 31 inch to 54 inch: Angle size shall be 2 inch x 2 inch x 3/16 inch.
   c. Duct width, 55 inch to 90 inch: Angle size shall be 2 inch x 2 inch x 1/4 inch.

E. During construction provide temporary closures of metal or taped polyethylene on open ductwork to prevent construction dust from entering ductwork system.

F. Duct sizes indicated are inside clear dimensions. For lined ducts, maintain sizes inside lining.

G. Provide openings in ductwork where required to accommodate thermometers and controllers. Provide pilot tube openings where required for testing of systems, complete with metal can with spring device or screw to ensure against air leakage. Where openings are provided in insulated ductwork, install insulation material inside a metal ring.

H. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.

I. Use double nuts and lock washers on threaded rod supports.

J. Connect terminal units to ducts directly with hard ducted connections

K. Connect grilles, registers and diffusers to ducts directly with hard ducted connections

L. At exterior wall louvers, seal duct to louver frame and install blank-out panels with insulation.

M. Leakage Tests:

1. Comply with SMACNA (LEAK) – Second Edition." in accordance with the following table:

System Type	Duct Construction Classification	Test Pressure	Leakage Class	Allowable leakage (cfm/100 sq ft of duct area)
Supply Air and Return Air Systems	10 in.	10 in.	4	17.9
	6 in	6 in	4	12.8
	4 in	4 in.	4	9.8
	3 in.	3 in.	4	8.2
	2 in.	2 in.	16	25.1
	2 in. (round)	2 in.	8	12.6
General Exhaust	10 in.	10 in.	6	26.8
	6 in.	6 in.	6	19.2
	4 in	4 in.	6	14.8
	3 in.	3 in.	8	16.3
	3 in. (round)	3 in. (round)	4	8.2

2. All testing shall be done in the presence of the engineer or owner’s representative. The contractor is responsible for providing all collars, caps, electric power, etc. necessary to perform the tests. The contractor is also responsible for scheduling the test no less than three (3) business days prior to its intended occurrence. Low pressure ductwork (2” class) shall be tested on an as needed basis at the engineer’s direction. Leakage test procedure shall follow the outlines and classifications in the SMACNA HVAC duct leakage test manual. If specimen fails to meet allotted leakage level, the contractor shall modify to bring it into compliance and shall retest it until acceptable leakage is demonstrated. Tests and necessary repair shall be completed prior to concealment of ducts.
3. Test the following systems:
   a. All ductwork greater than 3 inch class as defined within and all ductwork located outdoors shall be tested.
   b. Test representative sections totaling no less than 25 percent of the total installed duct area for each pressure class to be tested.
4. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
5. Test for leaks before insulation application.
6. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test entire system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure. Give seven days' advance notice for testing.

3.02 CLEANING

A. See Section 017419 - Construction Waste Management and Disposal, for additional requirements.

B. Clean duct systems with high power vacuum machines. Protect equipment that could be harmed by excessive dirt with filters, or bypass during cleaning. Provide adequate access into ductwork for cleaning purposes.

END OF SECTION 233100

SECTION 233300
AIR DUCT ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Air turning devices/extractors.
B. Combination fire and smoke dampers.
C. Duct access doors.
D. Duct test holes.
E. Fire dampers.
F. Flexible duct connectors.
G. Smoke dampers.
H. Volume control dampers.
I. Low leakage (Class 1A) control dampers.
J. Remote damper operators
K. Miscellaneous products:
    1. Damper operators.
    2. Internal strut end plugs.
    3. Duct opening closure film.
L. Operational testing of fie dampers, smoke dampers and combination fire and smoke dampers.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.
B. Section 230547-Vibration Controls for HVAC.
C. Section 230548 - Vibration and Seismic Controls for HVAC.
D. Section 233100 - HVAC Ducts and Casings.
E. Section 233600 - Air Terminal Units: Pressure regulating damper assemblies.
F. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2022.
B. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2022.
C. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems 2024.
D. NFPA 92 - Standard for Smoke Control Systems 2021, with Amendment.
E. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations 2024.
F. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible 2020.
G. UL 33 - Safety Heat Responsive Links for Fire-Protection Service Current Edition, Including All Revisions.
H. UL 555 - Standard for Fire Dampers Current Edition, Including All Revisions.
I. UL 555S - Standard for Smoke Dampers Current Edition, Including All Revisions.
J. Comply with NFPA 80 and NFPA 105 for installation and operational testing of fire dampers, smoke dampers and combination fire and smoke dampers.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide for shop fabricated assemblies including volume control dampers and duct access doors. Include electrical characteristics and connection requirements.

C. Shop Drawings: Indicate for shop fabricated assemblies including volume control dampers and duct access doors.

D. Manufacturer's Installation Instructions: Provide instructions for fire dampers and combination fire and smoke dampers.

E. Project Record Drawings: Record actual locations of access doors and test holes.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Fusible Links: One of each type and size.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Protect dampers from damage to operating linkages and blades.

PART 2 PRODUCTS

2.01 AIR TURNING DEVICES/EXTRACTORS

A. Manufacturers:
   1. Duro Dyne, Inc
   2. Metalaire, Inc.
   3. SEMCO Incorporated
   4. Ductmate Industries, Inc.

B. Turning Vanes for Metal Ducts: Double wall or single wall curved blades of galvanized sheet steel or as per duct material; support with bars perpendicular to blades set into vane runner suitable for duct mounting.
   1. Single Vane: Radius of 4.5 inches and spacing of 3.25 inches or radius of 2 inches and spacing of 1.5 inches. Maximum unsupported length of single vane turning vanes shall not exceed 36 inches.
   2. Double Vane: Radius of 4.5 inches and spacing of 3.25 inches. Maximum unsupported length of double vane shall not exceed 72 inches.
   3. Short radius vanes are not acceptable.

2.02 COMBINATION FIRE AND SMOKE DAMPERS

A. Manufacturers:
   1. Ruskin Company, a brand of Johnson Controls; ____ www.ruskin.com. Model FSD-60, FSD-60-3, 1-1/2 or 3 hour rated as applicable.
   2. Pottorff: a division of PCI Industries, Inc.; ____: www.pottroff.com. Model FSD-151, FSD-351, 1-1/2 or 3 hour rated as applicable.
   3. Greenheck; ____ : www.greenheck.com. Model FSD-311, FSD-331, 1-1/2 or 3 hour rated as applicable.

B. Fabricate in accordance with NFPA 90A, UL 555, UL 555S, and as indicated.

C. Provide factory sleeve and collar for each damper.

D. Multiple Blade Dampers: Frame: same as duct material type with galvanized airfoil blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, stainless steel jamb seals, 1/8 by 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock, and 1/2 inch actuator shaft.

E. Operators: UL listed and labelled spring return electric type suitable for 120 volts, single phase, 60 Hz. Provide end switches to indicate damper position. Locate damper operator on exterior of

duct and link to damper operating shaft.

F. Resettable Fire Stat:
   1. UL classified dual temperature device allows the damper to be re-opened after initial closure from high heat.
   2. Electrically and mechanically locks damper in closed position when duct temperatures exceed 165 degrees F (74 degrees C) or 212 degrees F (100 degrees C).
   3. Allow damper to remain operable through a high limit temperature sensor for smoke management purposes while temperature is below 250 degrees F (121 degrees C) or 350 degrees F (177 degrees C).
   4. UL classified dual temperature device allows the damper to be re-opened after initial closure from high heat.
   5. Electrically and mechanically locks damper in closed position when duct temperatures exceed 165 degrees F (74 degrees C) or 212 degrees F (100 degrees C).

G. The HVAC contractor shall provide all devices, relays, end switches, e/p switches, control components, air piping, power wiring, control wiring and interlock wiring as required to accomplish the sequence of operation for these dampers.

2.03 DUCT ACCESS DOORS

A. Manufacturers:
   1. Ductmate Industries, Inc.
   2. Greenheck
   3. McGill Airflow LLC
   4. Pottorff: a division of PCI Industries, Inc.
   5. Ventfabrics, Inc.

B. Fabricate in accordance with SMACNA (DCS) and as indicated. Access doors shall be constructed oof the same material and to the design pressure class of the ductwork.

C. Fabrication: Rigid and close-fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ducts, install minimum 1 inch thick insulation with sheet metal cover.
   1. Less Than 12 inches Square: Secure with sash locks.
   2. Up to 18 inches Square: Provide two hinges and two sash locks.
   3. Up to 24 by 48 inches: Three hinges and two compression latches with outside and inside handles.
   4. Larger Sizes: Provide an additional hinge.

D. Same material as duct construction.

E. Locate on sides of duct. Bottom edge not less than 2 in. above bottom of duct.

F. Maximum 24 in. X 24 in. Minimum 24 in. one side, other side 2 in. less than duct height.

G. Access doors with sheet metal screw fasteners are not acceptable.

2.04 DUCT TEST HOLES

A. Temporary Test Holes: Cut or drill in ducts as required. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

B. Permanent Test Holes: Factory fabricated, air tight flanged fittings with screw cap. Provide extended neck fittings to clear insulation.
   1. Manufacturers:
      a. Carlisle HVAC Products; Dynair Test Port with Red Cap with O-Ring Seal: www.carlislehvac.com.

2.05 FIRE DAMPERS

A. Manufacturers:
   1. Ruskin Company; _____: www.ruskin.com.
   2. Pottorff: a division of PCI Industries, Inc.
   3. Greenheck

B. Provide Dynamic type dampers. Fabricate in accordance with NFPA 90A and UL 555, and as indicated.

C. Horizontal Dampers: Frame: same as duct material, stainless steel closure spring, and lightweight, heat retardant non-asbestos fabric blanket.

D. Curtain Type Dampers: Frame: same as duct material with interlocking blades. Provide stainless steel closure springs and latches for horizontal installations. Configure with blades out of air stream except for 1.0 inch pressure class ducts up to 12 inches in height.

E. Multiple Blade Dampers: Frame: same as duct material with galvanized steel blades, oil-impregnated bronze or stainless steel sleeve bearings and plated steel axles, 1/8 by 1/2 inch plated steel concealed linkage, stainless steel closure spring, blade stops, and lock.

F. Fusible Links: UL 33, separate at 160 degrees F (71 degrees C) with adjustable link straps for combination fire/balancing dampers. Closing rating in ducts up to 4 inch wg static pressure class and minimum 3,000 FPM velocity

G. Provide a 10 guage welded vertical stiffener at each corner to prevent damper misalignment.

2.06 FLEXIBLE DUCT CONNECTORS

A. Manufacturers:
1. Ductmate Industries, Inc, a DMI Company; _____: www.ductmate.com.
2. Duro Dyne Inc.
3. Ventfabrics, Inc.

B. Fabricate in accordance with SMACNA (DCS) and as indicated.

C. Maximum Installed Length: 3 inch.

D. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
1. Minimum Weight: 26 oz./sq.yd. .
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 degrees F .

E. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
1. Minimum Weight: 24 oz./sq.yd.{ch#3} .
2. Tensile Strength: 530 lbf/inch530 lbf/inch (93 N/mm) in the warp and [CHOICE TEXT] in the filling.

F. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch (6-mm) movement at start and stop.

2.07 SMOKE DAMPERS

A. Manufacturers:
1. Ruskin Company; _____: www.ruskin.com.
2. Greenheck

B. Fabricate in accordance with NFPA 90A and UL 555S, and as indicated.

C. Dampers: UL Class 1 airfoil blade type smoke damper, normally open automatically operated by electric actuator, with frame the same as duct material.

D. Operators: UL listed and labelled spring return electric type suitable for 120 volts, single phase, 60 Hz. Provide end switches to indicate damper position. Locate damper operator on exterior of duct and link to damper operating shaft.

E. Provide motor mount bracket strengthener for dampers over 10" in height.

F. Provide a 10 guage welded vertical stiffener at each corner to prevent damper misalignment.

G. Actuators mounted out of airstream.

H. The HVAC contractor shall provide all devices, relays, end switches, e/p switches, control components, air piping, power wiring, control wiring and interlock wiring as required to accomplish the sequence of operation for these dampers.

2.08 MANUAL VOLUME CONTROL DAMPERS

A. Fabricate in accordance with SMACNA (DCS) and as indicated.

B. Single Blade Dampers:
1. Fabricate for duct sizes up to 24 inches maximum.
2. Blade: Hemmed, 24 gauge, 0.0239 inch, minimum, or not less than 2 gauges thicker than duct gauge, whichever is greater thickness.

C. Multi-Blade Damper: Fabricate of opposed blade pattern with maximum blade sizes 8 by 48 inch. Assemble center and edge crimped blades in prime coated or galvanized channel frame with suitable hardware.
1. Blade: 18 gauge, 0.0478 inch, minimum, with stiffeners.

D. Rods and End Bearings:
1. Provide continuous rods and end bearings on all damper blades installed in ducts of Pressure Class 2 or higher and in all ducts greater than 12 inches in length.
2. On multiple blade dampers, provide oil-impregnated nylon, thermoplastic elastomer, or sintered bronze bearings.

E. Quadrants:
1. Provide locking, indicating quadrant regulators on single and multi-blade dampers.
2. On insulated ducts mount quadrant regulators on stand-off mounting brackets, bases, or adapters.
3. Where rod lengths exceed 30 inches provide regulator at both ends.

2.09 LOW LEAKAGE (CLASS 1A) CONTROL DAMPERS

A. Manufacturers:
1. Ruskin Company; CD50 (Aluminum), CD60 (Galvanized Steel), CD60SS (Stainless Steel).
2. TAMCO, T.A. Morrison Co., Inc.; Series 1000, Series 1500

B. Ratings:
1. Leakage: Damper shall have a maximum leakage of 3 cfm/sq. ft. @1 inch wg. and shall be AMCA licensed as Class 1A.
2. Differential Pressure: Damper shall have a maximum differential pressure rating of 13 in. w.g. (3.2 kPa) for a 12 inches (305 mm) blade.
3. Velocity: Damper shall have a maximum velocity rating of 6,000 fpm (1,829 m/min).
4. Temperature: Damper shall be rated for -72 to 275 degrees F (-58 to 135 degrees C).

C. Frame:
1. For Aluminum : 5" x 1" x minimum 0.125" (127 x 25 x minimum 3.2 mm) 6063-T5 extruded aluminum hat channel with reinforced corners. Flanges both sides.
2. For Galvanized Steel: 5" x 1" x minimum 16 gauge (127 x 25 x minimum 1.6 mm), hot dipped hat shaped channel with reinforced corners. Flanges both sides.
3. For Stainless Steel: 5" x 1" x minimum 16 gauge (127 x 25 x minimum 1.6 mm), roll-formed hat shaped channel with reinforced corners. Flanges both sides. Type 304.

D. Blade:
   1. Style: Airfoil shaped.
   2. Width: Nominal 6 inches (152 mm)
   3. Materials:
      a. For Aluminum: Extruded aluminum, 6063-T5.
      b. For Galvanized: Minimum 14 gauge (2.0 mm) galvanized steel.
      c. For Stainless Steel: Minimum 18 gauge (1.3 mm) stainless steel. Type 304.

E. Bearings:
   1. For Aluminum: Molded synthetic sleeve, turning in hole in frame.
   2. For Galvanized: Self-lubricating stainless steel sleeve, turning in extruded hole in frame.
   3. For Stainless Steel: Self-lubricating stainless steel sleeve, turning in extruded hole in frame.

F. Seals:
   1. Aluminum Blades: Extruded closed cell neoprene type from -22 to 122 degrees F (-30 to 50 degrees C). Mechanically attached to blade edge.
   2. Galvanized Blades: Extruded closed cell neoprene type from -76 to 350 degrees F (-60 to 177 degrees C). Mechanically attached to blade edge.
   3. Stainless Steel Blades: Extruded silicone rubber type for ultra-low leakage from -76 to 350 degrees F (-60 to 177 degrees C). Mechanically attached to blade edge.
   4. Jambs: Flexible stainless steel metal compression type.

G. Axles:
   1. For Aluminum: Minimum ½ inch (13 mm) diameter plated steel, hex-shaped, mechanically attached to blade.
   2. For Galvanized: Minimum ½ inch (13 mm) diameter plated steel, hex-shaped, mechanically attached to blade.
   3. For Stainless Steel: Minimum 7/16 inches (11 mm) diameter 300 series stainless steel, hex-shaped, mechanically attached to blade.

H. Linkage: Concealed in frame. Capable of withstanding load equal to twice maximum operating force of damper operator, without deflection

I. Operation: Unless otherwise indicated or required, provide opposed blade for modulating applications and provide parallel blade for two-position or open/closed applications.

J. Provide blades oriented vertically with thrust washers.

K. Actuator:
   1. Refer to Section 230900 - HVAC Instrumentation and Controls to be furnished and installed by Controls vendor.
   2. Submit actuator torque requirements for each damper and each damper section.
   3. Damper manufacturer shall provide actuator mounting tabs on each damper section. Coordinate final location with controls vendoor. Tabs shall be welded to frame and provide sufficient support for actuator operation. Bolt adjacent tabs together for additional rigidity.

2.10 REMOTE DAMPER MANUAL OPERATORS - GEAR OPERATED

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ventfabrics, Inc. Ventlok
   2. Young Regulator Company.

B. Description: Miter gear drive designed for remote manual damper adjustment. 1 ¼” diameter die-cast gears with bronze bushings and ¼” thick zinc plated steel angle mounting assembly. Square Rod, ½” or 3/8”, operator. Ventlok 680 or Young Regulator 927C, 927 B/C-1/4.

C. Provide universal joints and couplings to accommodate offsets in operator rods. Maximum offset of 30 degrees: Brass. Ventlok 695, 696, 601, 602-A, 602-B or Young Regulator 617, 661-B.

D. Ceiling- and Wall-Box Mountings: Stainless steel. Recessed, depth to suit ceiling or wall assembly for flush appearance. Ventlok 666, 677 or Young Regulator 301, 315.

E. Ceiling- and Wall-Box Cover-Plate Material: Stainless steel. Flush mounted with ceiling or wall assembly in which installed. Ventlok 666, 677 or Young Regulator 301, 315.

F. Provide for all duct-mounted manual balancing dampers located above drywall/plaster ceiling assemblies.

2.11 MISCELLANEOUS PRODUCTS

A. Internal Strut End Plugs: Combination end-mounting and sealing plugs for metal conduit used as internal reinforcement struts for metal ducts; plug crimped inside conduit with outside gasketed washer seal.

B. Duct Opening Closure Film: Mold-resistant, self-adhesive film to keep debris out of ducts during construction.
   1. Thickness: 2 mils.
   2. High tack water based adhesive.
   3. UV stable light blue color.
   4. Elongation Before Break: 325 percent, minimum.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install accessories in accordance with manufacturer's instructions, NFPA 90A, and follow SMACNA (DCS). Refer to Section 233100 for duct construction and pressure class.

B. Provide backdraft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated.

C. Provide duct access doors for inspection and cleaning before and after filters, coils, fans, automatic dampers, at fire dampers, combination fire and smoke dampers, and elsewhere as indicated. For fire dampers, smoke dampers and combination fire smoke damper access provide minimum 12 inch x 12 inch access. Removable ducts shall utilize flanges or "Sure-Clamp Access" as manufactured by Langdon Inc. Provide for cleaning kitchen exhaust ducts in accordance with NFPA 96. Provide the following minimum access panels:
   1. One-Hand or Inspection Access: 8 by 5 inches.
   2. Two-Hand Access: 12 by 6 inches.
   3. Head and Hand Access: 18 by 10 inches
   4. Head and Shoulders Access: 21 by 14 inches
   5. Body Access: 25 by 14 inches.
   6. Body plus Ladder Access: 25 by 17 inches.

D. Review access door locations prior to fabrication.

E. Provide duct test holes where indicated and required for testing and balancing purposes.

F. Provide fire dampers, combination fire and smoke dampers, and smoke dampers at locations indicated, where ducts and outlets pass through fire rated components, and where required by Authorities Having Jurisdiction. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.

G. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92.

H. Demonstrate re-setting of fire dampers to Owner's representative.

I. At fans and motorized equipment associated with ducts, provide flexible duct connections immediately adjacent to the equipment.

J. At equipment supported by vibration isolators, provide flexible duct connections immediately adjacent to the equipment.
   1. Refer to Section 230548.

K. For fans developing static pressures of 5.0 inches and over, cover flexible connections with leaded vinyl sheet, held in place with metal straps.

L. Provide balancing dampers at points on supply, return, and exhaust systems where branches are taken from larger ducts as required for air balancing. Install minimum 2 duct widths from duct take-off. For interally lined ductwork provide 2 internal saddles to protect lining. Install levers to be accessible through the insulation.

M. Provide balancing dampers on duct take-off to diffusers, grilles, and registers, regardless of whether dampers are specified as part of the diffuser, grille, or register assembly. For interally lined ductwork provide 2 internal saddles to protect lining. Install levers to be accessible through the insulation.

N. Fire, smoke and fire/smoke damper testing
   1. Provide operational testing, acceptance testing and record documentation for all fire dampers, smoke dampers and combination fire and smoke dampers in accordance with NFPA 80 and NFPA 105:
      a. A qualified person shall conduct all operational and acceptance testing.
      b. Verify that dampers operate properly and are without obstruction.
      c. Verify full and unobstructed access to dampers and listed components.
      d. Verify operation of all local and remote indicating devices.
      e. Verify release elements and reset switches including prevention of reopening.
      f. Dynamic rated elements shall be tested after air balancing and during normal air flow conditions.
      g. Provide documentation of inspections and tests including location and type of damper, date(s), name of inspector and deficiencies discovered.
      h. Provide copy of documentation to Architect and AHJ as required.

END OF SECTION 233300

SECTION 233416
CENTRIFUGAL HVAC FANS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Backward inclined centrifugal fans.

B. Airfoil wheel centrifugal fans.

C. Bearings and drives.

D. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 230513 - Common Motor Requirements for HVAC Equipment.

B. Section 230515 - Variable Frequency Motor Controllers.

C. Section 230547-Vibration Controls for HVAC.

D. Section 230713 - Duct Insulation.

E. Section 233100 - HVAC Ducts and Casings:

F. Section 233300 - Air Duct Accessories:

G. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings 2015 (Reaffirmed 2020).

B. ABMA STD 11 - Load Ratings and Fatigue Life for Roller Bearings 2014 (Reaffirmed 2020).

C. AMCA (DIR) - (Directory of) Products Licensed Under AMCA International Certified Ratings Program 2015.

D. AMCA 99 - Standards Handbook 2016.

E. AMCA 210 - Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating 2016.

F. AMCA 300 - Reverberant Room Method for Sound Testing of Fans 2014.

G. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data 2022.

H. NEMA MG 1 - Motors and Generators 2021.

I. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. SMACNA (DCS) - HVAC Duct Construction Standards Metal and Flexible 2020.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on centrifugal fans and accessories including certified fan performance curves with specified operating point clearly plotted, power, speed, certified sound power levels for both fan inlet and outlet at rated capacity, and electrical characteristics and connection requirements.
   1. Submit the family of rpm curves indicating operating point relative to fan class.
   2. VFD application: Submit fan selection with system curve indication, operating point, family of all rpm curves in fan class and the "DO NOT SELECT TO THE LEFT OF THIS CURVE". The minimum rpm shall be indicated.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Dampers, including housings, linkages, and operators where provided.
   6. Fan speed controllers where provided.
   7. All selected sheave (fan and motor) calculations for belt driven fans. Include drive construction and rating.

8. Catalog cuts and dimension drawings.
9. Furnished specialties, and accessories for each fan.

C. Shop Drawings: Indicate assembly of centrifugal fans and accessories including fan curves with specified operating point clearly plotted, sound power levels for both fan inlet and outlet at rated capacity, and electrical characteristics and connection requirements. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.
   2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
   3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

D. Fan characteristic curves provided by manufacturer must be such that the fan operating point:
   1. Operates stably without surging at design conditions.
   2. Is non-overloading.
   3. Is to the right of peak efficiency.
   4. Is on the steep part of the fan curve such that an increase in static pressure over the specified duty results in not more than the same percent decrease in volume (CFM) and does not affect the stability of fan operation.
   5. Is no greater than 60 to 70 percent of the peak static pressure.
   6. Has the ability to provide an allowable increase in fan speed of 15 percent above the design point without surging or increasing the class of fan.

E. VFD application: Submit fan selection with system curve indication, operating point, family of all rpm curves in fan class and the "DO NOT SELECT TO THE LEFT OF THIS CURVE". The minimum rpm shall be indicated.

F. Manufacturer's Instructions: Include complete installation instructions.

G. Maintenance Data: Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

H. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Fan Belts: One set for each individual fan.
   3. Sheaves: One set for each unit

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal. Test and rate all fans in accordance with the standards of AMCA. All fans shall bear the AMCA rating and seal.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. NEMA Compliance: Motors and electrical accessories shall comply with NEMA 1.

1.06 SHORT CIRCUIT CURRENT RATING:

A. All electrical equipment, starters and controller assemblies shall be provided with short circuit rating as follows:
   1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.

2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
3. Label equipment utilizing series ratings as required by NFPA 70.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect motors, shafts, and bearings from weather and construction dust. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.

B. Lift and support units with manufacturer's designated lifting or supporting points.

C. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.

1.08 FIELD CONDITIONS

A. Permanent fans may not be used for ventilation during construction.

1.09 COORDINATION

A. Coordinate size and location of structural-steel support members

1.10 SOURCE QUALITY CONTROL

A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210/ASHRAE 51, "Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating."

1.11 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Belts: [**One**] set(s) for each belt-driven unit.
2. Sheaves : [**One**] set(s) for each unit

PART 2 PRODUCTS

2.01 MANUFACTURERS BY FAN TYPE

A. Airfoil Centrifugal Fans:
1. Loren Cook Company; _____: www.lorencook.com.
2. Twin City Fan & Blower; BAESW: www.tcf.com.
3. Howden Fan Company
4. New York Blower Company
5. Greenheck

B. Backward-Inclined Centrifugal Fans:
1. Loren Cook Company; _____: www.lorencook.com.
2. Twin City Fan & Blower; TCBI: www.tcf.com.
3. Howden Fan Company
4. New York Blower Company
5. Greenheck

C. Plenum Fans:
1. Loren Cook Company; _____: www.lorencook.com.
2. Twin City Fan & Blower; EPF: www.tcf.com.
3. Howden Fan Company
4. New York Blower Company
5. Greenheck

D. Fan Arrays:
1. Nortek Air Solutions - FANWALL

2.02 PERFORMANCE REQUIREMENTS

A. Performance Ratings: Determined in accordance with AMCA 210 and bearing the AMCA Certified Rating Seal.

B. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

C. Fabrication: Comply with AMCA 99.

D. Performance Base: Sea level conditions.

E. Temperature Limit: Maximum 300 degrees F.

F. Static and Dynamic Balance Wheel: Eliminate vibration or noise transmission to occupied areas. Balancing shall be done at the factory.

G. Motor pulley shall be variable pitch diameter, for fans up to 25 hp and 1000 rpm, except fans with variable inlet vanes and VFD's use fixed pitch, and fixed pitch diameter, over 25 hp or 1000 rpm. Supply and install one fixed pitch pulley change, as required, per fan to balance systems. Companion sheaves shall maintain belts parallel. Belt guards shall be in compliance with OSHA regulations and with tachometer opening for fan speed measurements. Manufacturer shall provide replacement fixed pitched sheaves where needed to balance system.

2.03 WHEEL AND INLET

A. Backward Inclined: Steel construction with smooth curved inlet flange, heavy back plate, backwardly curved blades welded or riveted to flange and back plate; cast iron or cast steel hub riveted to back plate and keyed to shaft with set screws.

B. Airfoil Wheel: Steel construction with smooth curved inlet flange, heavy back plate die formed hollow airfoil shaped blades continuously welded at tip flange, and back plate; cast iron or cast steel hub riveted to back plate and keyed to shaft with set screws; and special coatings. A performance cut-off shall be furnished to prevent reicultaion of air in the fan housing.

2.04 HOUSING

A. Heavy gauge steel, spot welded for AMCA 99 Class I and II fans, and continuously welded for Class III, adequately braced, designed to minimize turbulence with spun inlet bell and shaped cut.

B. Factory finish before assembly to manufacturer's standard. For fans handling air downstream of humidifiers, provide two additional coats of paint. Prime coating on aluminum parts is not required.

C. Provide bolted construction with horizontal flanged split housing.

D. Fabricate plenum fans without volute housing, in lined steel cabinet..

E. Provide spark resistant construction fans in accordance with AMCA Standards, Type A, B or C as indicated.
   1. Type A: All where noted, parts in contact with air shall be non-ferrous.
   2. Type B: Shall be non-ferrous fan wheel and shaft rings.
   3. Type C: Shall be with non-ferrous inlet cone and rubbing plate.
   4. Motor shall be explosion proof, Class I, Group D, Division 2.
   5. Belt drive shall be non-sparking.

F. Split construction: Provide split construction for fans too large for available doorways or passageways. Split in half along center of shaft with angles, etc., to allow removal of section without disturbing inlet and discharge connection; arranged for bolting. Provide bolts with lockwashers and nuts. Construction shall be inspected by manufacturer after field assembly and certified that they have been properly assembled and ready for proper operation.

G. Unit shall bear an engraved aluminum nameplate and shall be shipped in ISTA certified transite tested packaging.

2.05 BEARINGS AND DRIVES

A. Bearings: Heavy duty pillow block type, selfgreasing roller bearings, or ABMA STD 11 life at 120,000 hours or ball bearings, with ABMA STD 9 L10 at 50,000 hours..

B. Shafts: Hot rolled steel, ground and polished, with keyway, protectively coated with lubricating oil, and shaft guard. Limit to 70percent of first critical speed at top speed range for fan.

C. Drive: Cast iron or steel sheaves, dynamically balanced, keyed. Variable and adjustable pitch sheaves for motors 15 hp and under, selected so required rpm is obtained with sheaves set at mid-position. Fixed sheave for 20 hp and over and fans using VFD's, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.

D. Belt Guard: Fabricate to OSHA and SMACNA (DCS); 0.106 inch thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

2.06 MOTORS

A. Comply with requirements in Section 230513 - Common Motor Requirements for HVAC Equipment.

2.07 ACCESSORIES

A. Provide primed and painted structural steel base for mounting of fan housing, motor and drive assembly for mounting on vibration isolators. Refer to Section 230547.

B. Inlet/Outlet Screens: Stainless Steel welded grid.

C. Access Doors: Shaped to fit scroll, with quick opening latches and gaskets.

D. Scroll Drain: 3/4 inch steel pipe coupling welded to low point of fan scroll.

E. Companion Flanges: Rolled flanges for duct connections of same material as housing. Provide on inlets and discharge of fans.

F. Spark Resistant Construction: AMCA 99

G. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Coordinate size and location of structural-steel support members.

C. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.Section 033000 - Cast-in-Place Concrete

D. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section 077200 - Roof Accessories.

E. Install fans with resilient mountings and flexible electrical leads. Refer to Section 230548.

F. Install flexible connections between fan inlet and discharge ductwork; refer to Section 233300. Ensure metal bands of connectors are parallel with minimum one inch flex between ductwork and fan while running.

G. Install fan restraining snubbers; refer to Section 230547. Adjust snubbers to prevent tension in flexible connectors when fan is operating.

H. Provide fixed sheaves required for final air balance.

I. Provide safety screen where inlet or outlet is exposed.

3.02 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
   1. Balance all fan wheels and all other moving components statically and dynamically. Where a coating is specified and it affects the balance of the fan wheel, perform the balancing after the coating has been applied.

2. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
3. See Section 230593 - Testing, Adjusting, and Balancing for HVAC for testing, adjusting, and balancing procedures.
4. Disable automatic temperature-control operators, energize motor, and confirm proper motor rotation and unit operation, adjust fan to indicate RPM, and measure and record motor voltage and amperage.
5. For units with varibale frequency drives, lock out critical frequencies before initial start.
6. Operational Test: After electrical circuitry has been energzied, start units to confirm proper motor rotation and unit operation.
7. Replace fan and motor pulleys are required to achieve design airflow.
8. Shut unit down and reconnect automatic temperature controls operators.
9. Remove and replace malfunctioning units and retst as specified above.

END OF SECTION 233416

SECTION 233423
HVAC POWER VENTILATORS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Roof exhausters.

B. Upblast roof exhausters.

C. Laboratory and fume exhaust.

1.02 RELATED REQUIREMENTS

A. Section 230513 - Common Motor Requirements for HVAC Equipment.

B. Section 230547-Vibration Controls for HVAC.

C. Section 233300 - Air Duct Accessories: Backdraft dampers.

D. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

1.03 REFERENCE STANDARDS

A. AMCA 99 - Standards Handbook 2016.

B. AMCA 210 - Laboratory Methods of Testing Fans for Certified Aerodynamic Performance Rating 2016.

C. AMCA 211 - Certified Ratings Program Product Rating Manual for Fan Air Performance 2022, with Editorial Revision (2023).

D. AMCA 260 - Laboratory Methods of Testing Induced Flow Fans for Rating 2020.

E. AMCA 300 - Reverberant Room Method for Sound Testing of Fans 2014.

F. AMCA 311 - Certified Ratings Program Product Rating Manual for Fan Sound Performance 2016.

G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2020.

I. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations 2024.

J. UL 705 - Power Ventilators Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on fans and accessories including fan curves with specified operating point clearly plotted, power, RPM, certified sound power levels at rated capacity, roof curbs, fan speed controllers, dimension drawings and electrical characteristics and connection requirements.

C. Fan characteristic curves provided by manufacturer must be such that that the fan operating point:
   1. Is non-overloading.
   2. Is to the right of peak efficiency.
   3. Is on the steep part of the fan curve such that an increase in static pressure over the specified duty results in not more than the same percent decrease in volume (CFM) and does not affect the stability of fan operation.
   4. Is no greater than 60 to 70 percent of the peak static pressure.
   5. Has the ability to provide an allowable increase in fan speed of 15 percent above the design point without surging or increasing the class of fan.

D. Manufacturer's Instructions: Indicate installation instructions.

E. Maintenance Data: Include instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

F. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Fan Belts: One set for each individual fan.

G. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Wiring Diagrams: Power, signal, and control wiring.
   2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
   3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

1.06 SHORT CIRCUIT CURRENT RATING:

A. All electrical equipment, starters and controller assemblies shall be provided with short circuit rating as follows:
   1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.
   2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
   3. Label equipment utilizing series ratings as required by NFPA 70.

PART 2 PRODUCTS

2.01 POWER VENTILATORS - GENERAL

A. Static and Dynamically Balanced: AMCA 204 - Balance Quality and Vibration Levels for Fans.

B. Performance Ratings: Determined in accordance with AMCA 210 and bearing the AMCA Certified Rating Seal.

C. Sound Ratings: AMCA 301, tested to AMCA 300 and bearing AMCA Certified Sound Rating Seal.

D. Fabrication: Comply with AMCA 99.

E. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705.

F. Electrical Components: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

G. Enclosed Safety Switches: Comply with NEMA 250.

H. VFD's shall use fixed pitch

I. Provide spark resistant construction fans in accordance with AMCA Standards, Type A, B or C as indicated.
   1. Type A: All where noted, parts in contact with air shall be non-ferrous.
   2. Type B shall be non-ferrous fan wheel and shaft rings.
   3. Type C shall be with non-ferrous inlet cone and rubbing plate.
   4. Motor shall be explosion proof, Class I, Group D, Division 2.
   5. Belt drive shall be non-sparking.

2.02 ROOF EXHAUSTERS

A. Manufacturers:
   1. Greenheck Fan Corporation; _____: www.greenheck.com.

B. Fan Unit: V-belt or direct driven as indicated, with spun aluminum housing; resilient mounted motor; 1/2 inch mesh, 0.62 inch thick aluminum wire birdscreen; square base to suit roof curb with continuous curb gaskets.

C. Motors:
1. Totally enclosed fan cooled (TEFC).
2. Heavy duty ball bearing type.
3. Mount on vibration isolators or resilient cradle mounts, out of air stream.
4. Fully accessible for maintenance.

D. Housing:
1. Construct of heavy gauge aluminum including curb cap and motor compartment.
2. Rigid internal support structure.
3. One-piece fabricated or fully welded curb-cap base for leak proof construction.
4. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
5. Provide breather tube for fresh air motor cooling and wiring.

E. Shafts and Bearings:
1. Fan Shaft:
a. Ground and polished steel with anti-corrosive coating.
b. First critical speed at least 25 percent over maximum cataloged operating speed.
2. Bearings:
a. Permanently sealed or pillow block type.
b. Minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
c. 100 percent factory tested.

F. Disconnect Switches:
1. Factory mounted and wired.
2. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
a. Indoor Clean, Dry Locations: Type 1.
b. Outdoor Locations: Type 3R.
3. Finish for Painted Steel Enclosures: Provide manufacturer's standard, factory applied gray, or _____ unless otherwise indicated.
4. Positive electrical shutoff.
5. Wired from fan motor to junction box installed within motor compartment.

G. Roof Curb: 12 inch high insulated self-flashing of galvanized steel with continuously welded seams, built-in cant strips.

H. Damper: Aluminum multiple blade construction, felt edged with offset hinge pin, nylon bearings, blades linked, and line voltage motor drive, power open, spring return.

I. Sheaves: Cast iron or steel, dynamically balanced, bored to fit shafts and keyed; variable and adjustable pitch motor sheave selected so required rpm is obtained with sheaves set at mid-position; fan shaft with self-aligning pre-lubricated ball bearings.

J. Options/Accessories:
1. Automatic Belt Tensioner: Automatic device that adjusts for correct belt tension for single drives.
2. Birdscreen:
a. Provide galvanized steel construction.
b. Protects fan discharge.
3. Dampers: Provide motorized type.
4. Drain Connection:
a. Aluminum construction.
b. Allows single-point drainage of grease, water, or other residues.
5. Finishes: Factory primed.
6. Hinge Kit:

a. Aluminum hinges.
b. Hinges and restraint cables mounted to base (sleeve).
c. Allows fan to tilt away for access to wheel and ductwork for inspection and cleaning.

7. External motor speed controllers for field mounting.

2.03 UPBLAST ROOF EXHAUSTERS

A. Manufacturers:
1. Greenheck Fan Corporation; _____: www.greenheck.com.

B. Direct Drive Fan:
1. Fan Wheel:
a. Type: Non-overloading, backward inclined centrifugal.
b. Material: Aluminum.
2. Statically and dynamically balanced.
3. Motors:
a. Totally enclosed fan cooled (TEFC).
b. Heavy duty ball bearing type.
c. Mount on vibration isolators or resilient cradle mounts, out of air stream.
d. Fully accessible for maintenance.
4. Housing:
a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
b. Rigid internal support structure.
c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
e. Provide breather tube for fresh air motor cooling and wiring.

C. Shafts and Bearings:
1. Fan Shaft:
a. Ground and polished steel with anti-corrosive coating.
b. First critical speed at least 25 percent over maximum cataloged operating speed.
2. Bearings:
a. Permanently sealed or pillow block type.
b. Minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
c. 100 percent factory tested.

D. Drive Assembly:
1. Belts, pulleys, and keys oversized for a minimum of 150 percent of driven horsepower.
2. Belts: Static free and oil resistant.
3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
4. Motor pulley adjustable for final system balancing.
5. Readily accessible for maintenance.

E. Disconnect Switches:
1. Factory mounted and wired.
2. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
a. Outdoor Locations: Type 3R.
3. Finish for Painted Steel Enclosures: Provide manufacturer's standard, factory applied gray, or _____ unless otherwise indicated.
4. Positive electrical shutoff.
5. Wired from fan motor to junction box installed within motor compartment.

F. Roof Curb: 12 inch high self-flashing of galvanized steel with continuously welded seams, built-in cant strips, insulation and curb bottom, and factory installed nailer strip.

G. Options/Accessories:

1. Automatic Belt Tensioner: Automatic device that adjusts for correct belt tension for single drives.
2. Birdscreen:
   a. Provide galvanized steel construction.
   b. Protects fan discharge.
3. Roof Curb Extension: Vented curb extension where required for compliance with minimum clearances required by NFPA 96.
4. Hinge Kit:
   a. Aluminum hinges.
   b. Hinges and restraint cables mounted to base (sleeve).
   c. Allows fan to tilt away for access to wheel and ductwork for inspection and cleaning.

2.04 LABORATORY AND FUME EXHAUST

A. Manufacturers:
   1. Twin City Fan & Blower; TVIFE: www.tcf.com.
   2. Strobic Air Corporation; _____: www.strobicair.com.
   3. Greenheck.
   4. Substitutions: See Section 016000 - Product Requirements.

B. General Requirements:
   1. Provide fan types tested in accordance with AMCA 210, AMCA 260 (Induced Flow Fans) and AMCA 300 in an AMCA-accredited laboratory.
   2. Provide fan units rated in accordance with AMCA 211 and AMCA 311.

C. Fan Assemblies:
   1. Provide unit suitable for maintaining structural integrity and operation in 125 mph wind without external guy-wires or supplemental supports when mounted on manufacturer-supplied roof curbs.

D. Belt Drive Fan:
   1. Fan Wheel:
      a. Type: Non-overloading, backward inclined centrifugal.
      b. Material: Aluminum.
   2. Statically and dynamically balanced.
   3. Motors:
      a. Totally enclosed fan cooled (TEFC).
      b. Heavy duty ball bearing type.
      c. Mount on vibration isolators or resilient cradle mounts, out of air stream.
      d. Fully accessible for maintenance.
   4. Housing:
      a. Construct of heavy gauge aluminum including curb cap, windband, and motor compartment.
      b. Rigid internal support structure.
      c. One-piece fabricated or fully welded curb-cap base to windband for leak proof construction.
      d. Construct drive frame assembly of heavy gauge steel, mounted on vibration isolators.
      e. Provide breather tube for fresh air motor cooling and wiring.

E. Shafts and Bearings:
   1. Fan Shaft:
      a. Ground and polished steel with anti-corrosive coating.
      b. First critical speed at least 25 percent over maximum cataloged operating speed.
   2. Bearings:
      a. Permanently sealed or pillow block type.
      b. Minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
      c. 100 percent factory tested.

F. Drive Assembly:
   1. Belts, pulleys, and keys oversized for a minimum of 150 percent of driven horsepower.
   2. Belts: Static free and oil resistant.
   3. Fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.
   4. Motor pulley adjustable for final system balancing.
   5. Readily accessible for maintenance.

G. Disconnect Switches:
   1. Factory mounted and wired.
   2. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
   3. Finish for Painted Steel Enclosures: Provide manufacturer's standard, factory applied gray, or _____ unless otherwise indicated.
   4. Positive electrical shutoff.
   5. Wired from fan motor to junction box installed within motor compartment.

H. High Plume Discharge Nozzle with Integral Windband:
   1. Provide combination discharge nozzle and windband to induce ambient airflow from outside fan housing and increase discharge velocities to velocities that comply with ANSI Z9.5, minimum 3,000 fpm.
   2. Provide a windband with a minimum of 120 inches discharge height above the roof surface.
   3. Provide a discharge nozzle that develops a maximum discharge air velocity of 9,500 fpm.
   4. Provide sound attenuated windband with integral closed-cell foam that does not increase overall height of fan system.
   5. Provide drain connection at lowest point of housing.

I. Roof Curb: 12 inch high self-flashing of galvanized steel with continuously welded seams, built-in cant strips, insulation and curb bottom, and factory installed nailer strip.

J. Mounting Base: Provide mounting base with lifting lugs.

K. Mixing Plenum Box: Designed to secure fans for wind loads up to 125 mph, mixing plenum box features modular construction allowing for multiple configurations and retrofit installation.
   1. Match fan housing material of construction, to include integral duct flange to mate to fan inlet.
   2. Provide side intake mixing plenum box for attachment of building duct.
   3. Mount mixing box on heavy duty roof curb.
   4. Provide insulated mixing box with stainless steel liner.
   5. Provide flow straighteners.

L. Isolation Dampers:
   1. Parallel blade design, constructed of galvanized steel.
   2. Provide 24 volt-powered, modulating actuator, rated for NEMA 250, Type 2 (IP54) environment, to coordinate with fan operation.

M. Bypass Dampers:
   1. Provide modulating opposed bladebypass damper to maintain fan discharge velocity.
   2. Provided opposed blade design, constructed of galvanized steel.
   3. Provide 24 volt-powered, modulating actuator, rated for NEMA 250, Type 2 (IP54) environment, to coordinate with fan operation.

N. Piezometer Ring: Provide piezometer ring type differential pressure device with connections for field-installed flow measuring instrumentation.
   1. Pressure Transducer without Display: Provide piezometer ring and transducer to convert differential pressure readings to 4 - 20 mA DC signal proportional to flow.
   2. Pressure Transducer/Transmitter with Display:
      a. Provide piezometer ring and transducer with local digital display to convert differential pressure readings to 4 - 20 mA DC signal proportional to flow. Include two independently adjustable SPDT dry-contact outputs.

b. Provide the display in a NEMA 250, Type 4X enclosure.

O. Options/Accessories:
1. Dampers: Provide motorized type.
2. Drain Connection:
a. Aluminum construction.
b. Allows single-point drainage of grease, water, or other residues.
3. Finishes: Factory primed.
4. Tie-down Points: Four brackets located on windband secures fan in heavy wind applications.
5. External motor speed controllers for field mounting.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Secure roof exhausters with cadmium plated steel lag screws to roof curb.

C. Extend ducts to roof exhausters into roof curb. Counterflash duct to roof opening.

D. Provide sheaves required for final air balance.

E. Install backdraft dampers on inlet to roof and wall exhausters.

F. Disassemble and reassemble units, as required for moving to final location, according to manufacturer's written instructions.

3.02 COORDINATION

A. Coordinate size and location of structural-steel support members.

B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 07 Section "Roof Accessories."

3.03 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:
1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Balance all fan wheels and all other moving components statically and dynamically. Where a coating is specified and it affects the balance of the fan wheel, perform the balancing after the coating has been applied.
9. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
10. Refer to Division 23 Section 230593 - Testing, Adjusting, and Balancing for HVAC for testing, adjusting, and balancing procedures.
11. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
12. For units with variable frequency drives lock out critical frequencies before initial start.

13. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
14. Replace fan and motor pulleys as required to achieve design airflow.
15. Shut unit down and reconnect automatic temperature-control operators.
16. Remove and replace malfunctioning units and retest as specified above.

B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 233423

SECTION 233600
AIR TERMINAL UNITS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Single-duct terminal units.
   1. Single-duct, constant-volume units.
   2. Single-duct, variable-volume units.

1.02 RELATED REQUIREMENTS

A. Section 230547-Vibration Controls for HVAC.

B. Section 230548 - Vibration and Seismic Controls for HVAC.

C. Section 230993 - SEQUENCE OF OPERATIONS

D. Section 233100 - HVAC Ducts and Casings.

1.03 REFERENCE STANDARDS

A. AHRI 410 - Forced-Circulation Air-Cooling and Air-Heating Coils 2001, with Addenda (2011).

B. AHRI 880 (I-P) - Performance Rating of Air Terminals 2017 (Reaffirmed 2023).

C. AHRI 885 - Procedure for Estimating Occupied Space Sound Levels in the Application of Air Terminals and Air Outlets 2008, with Addendum (2011).

D. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. ASHRAE Std 130 - Laboratory Methods of Testing Air Terminal Units 2016.

F. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials 2023b.

G. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements 2022.

H. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems 2008.

J. UL 181 - Standard for Factory-Made Air Ducts and Air Connectors Current Edition, Including All Revisions.

K. UL 94 - Tests for Flammability of Plastic Materials for Parts in Devices and Appliances Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data indicating configuration, general assembly, and materials used in fabrication. Include catalog performance ratings that indicate air flow, static pressure, and NC designation. Include electrical characteristics and connection requirements.

C. Shop Drawings: Indicate configuration, general assembly, and materials used in fabrication, and electrical characteristics and connection requirements.
   1. Include schedules listing discharge and radiated sound power level for each of second through sixth octave bands at inlet static pressures of 1 to 4 inch wg.

D. Certificates: Certify that coils are tested and rated in accordance with AHRI 410.

E. Manufacturer's Installation Instructions: Indicate support and hanging details, installation instructions, recommendations, and service clearances required.

F. Project Record Documents: Record actual locations of units and locations of access doors required for access of valving.

G. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts lists. Include directions for resetting constant-volume regulators.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

I. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.06 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for air terminal units.

PART 2 PRODUCTS

2.01 SINGLE-DUCT, VARIABLE-VOLUME AND CONSTANT-VOLUME UNITS

A. Manufacturers:
   1. Price Industries, Inc; _____: www.priceindustries.com.
   2. Anemostat; a Mestek Company
   3. Titus

B. General:
   1. Factory-assembled, AHRI 880 (I-P) rated and bearing the AHRI seal, air volume control terminal with damper assembly, flow sensor, externally mounted pressure independent volume controller, duct collars, and all required features.
   2. Control box bearing identification, including but not necessarily limited to nominal cfm, maximum and minimum factory-set airflow limits, coil type and coil (right or left hand) connection, where applicable.

C. Unit Casing:
   1. Minimum 22 gauge, 0.0299 inch galvanized steel.
      a. Assembled with longitudinal lock seam construction.
      b. Casing leakage to meet ASHRAE Std 130.
   2. Air Inlet Collar: Provide round, suitable for standard flexible duct sizes.
   3. Unit Discharge: Rectangular, with slip-and-drive connections.
   4. Acceptable Liners:
      a. 1 inch thick polyurethane foam adhesive complying with UL 181 erosion requirements in accordance with ASHRAE Std 62.1, and having a maximum smoke developed index of 50 for both insulation and adhesive, when tested in accordance with ASTM E84.
      b. Liner shall be hospital grade and in compliance with ASHRAE Standard 170, latest edition.
      c. Liner not to contain pentabrominated diphenyl ether (CAS #32534-81-9) or octabrominated diphenyl ether.

D. Sound Attenuator:
   1. Provide if required to meet scheduled acoustical performance requirements.
   2. Construction to consist of a continuous extension of the casing and liner as required to achieve required attenuation.
   3. Refer to Section 230549 - Noise Control and Acoustical Performance for Sound Attenuator requirements.

4. At 2000 fpm inlet velocity, the minimum operating pressure with attenuator added not to exceed 0.14 inch wg.
5. Acoustical fill shall be hospital grade and in compliance with ASHRAE Standard 170, latest edition.

E. Damper Assembly:
1. Heavy-gauge, galvanized steel or extruded aluminum construction with solid steel, nickel-plated shaft pivoting on HDPE, self-lubricating bearings.
2. Provide integral position indicator or alternative method for indicating damper position over full range of 90 degrees.
3. Incorporate low leak damper blades for tight airflow shutoff.
   a. Air Leakage Past Closed Damper: Maximum two percent of unit maximum airflow at 3 inch wg inlet static pressure, tested in accordance with ASHRAE Std 130.

F. Hot Water Heating Coil:
1. Coil Casing: Minimum 22 gauge, 0.0299 inch galvanized steel, factory-installed on terminal discharge with rectangular outlet, duct connection type.
   a. Access Door: Gasketed and insulated located on bottom and downstream of coils.
   b. Right or left coil inlets.
2. Coil Fins: Aluminum or aluminum plated fins, mechanically-bonded to seamless copper tubes.
   a. Fins to be formed in a high heat transfer sine wave configuration.
3. Coil leak tested to minimum 350 psig.
4. Base performance data on tests run in accordance with AHRI 410 and units to bear AHRI 410 label.

G. Controls:
1. DDC (Direct-Digital Controls):
   a. Refer to Division 23 Section 230900 and 230993 for terminal unit controllers and sequences of operation.
2. Airflow Sensor: Differential pressure airflow device measuring total, static, and wake pressures.
   a. Signal accuracy: Plus/minus five percent throughout terminal operating range.
3. Control Sequence:
   a. See section 230993 - SEQUENCE OF OPERATIONS for terminal unit sequences of operation.

2.02 SINGLE-DUCT, VARIABLE-VOLUME AND CONSTANT-VOLUME UNITS - EXHAUST/RETURN AIR

A. Manufacturers:
1. Price Industries, Inc: Model RDV, RDVQ, SDE, SDEQ.
2. Anemostat; a Mestek Company: Model XAFT.
3. Titus: Model DECV.

B. Acoustic Performance Requirements:
1. Use attenuation values found in appendix E of AHRI 885.

C. General:
1. Factory-assembled, AHRI 880 (I-P) rated and bearing the AHRI seal, air volume control terminal with damper assembly, flow sensor, externally mounted volume controller, duct collars, and all required features.
2. Control box bearing identification, including but not necessarily limited to nominal cfm, maximum and minimum factory-set airflow limits, coil type and coil (right or left hand) connection, where applicable.
3. Configurable for horizontal or verticle air flow, up or down as required by application.
4. Applications:
   a. Non-hazardous air/systems.
   b. Non-corrosive air/systems.
   c. Non-high humidity air/systems.

d. General Purpose exhaust air.
e. General Purpose return air.

D. Unit Casing:
1. Minimum 22 gauge, 0.0299 inch galvanized steel.
a. Assembled with longitudinal lock seam construction.
b. Casing leakage to meet ASHRAE Std 130.
2. Air Inlet Collar: round, suitable for standard duct sizes.
3. Air Discharge Collar: Round, with slip-and-drive connections or flanged.

E. Damper Assembly:
1. Heavy-gauge, galvanized steel construction with solid steel, nickel-plated shaft pivoting on HDPE, self-lubricating bearings.
2. Provide integral position indicator or alternative method for indicating damper position over full range of 90 degrees.
3. Incorporate low leak damper blades with blade seals for tight airflow shutoff.
a. Air Leakage Past Closed Damper: Maximum two percent of unit maximum airflow at 3 inch wg inlet static pressure, tested in accordance with ASHRAE Std 130.

F. Airflow Sensor: Differential pressure airflow device measuring total, static, and wake pressures.
1. Removable for maintenance, servicing and/or cleaning
2. Plastic parts are fire-resistant, complying with UL 94.
3. Provides accuracy within 5 percent with a 90 degree sheet metal elbow directly at the inlet of the assembly.
4. Control tubing is protected by grommets at the wall of the air flow sensor's housing.
5. Provide sensor with a pressure transducer to interface with a DDC system.
6. Signal accuracy: Plus/minus five percent throughout terminal operating range.

G. Sound Attenuator - Absorptive Type:
1. Provide if required to meet scheduled acoustical performance requirements or as indicated. Refer to Section 230549.
2. Provide on unit air inlet.
3. Media shall be of high density acoustic glass fiber insulation with fibers bonded with a thermosetting resin. Glass fiber density shall be as required to insure conformance with laboratory test data.
4. Media shall not rot, mildew, or otherwise deteriorate .
5. Media shall not cause corrosion of aluminum or steel.
6. Media protection shall be:
a. Polymer film: to prevent shedding, erosion and impregnation.
1) The wrapped acoustic media shall be separated from the perforated metal by a factory-installed acoustically transparent spacer.
2) The spacer shall be flame retardant and erosion resistant.
3) Mesh, screen or corrugated perforated liner will not be acceptable as a substitute for the specified spacer.
4) Silencer assemblies shall have Class 1 flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.

H. Electrical Requirements:
1. Single-point power connection.
2. Equipment wiring to comply with requirements of NFPA 70.

I. Control Transformers: Factory supplied and mounted for electric and electronic control applications.

J. Controls:
1. DDC (Direct-Digital Controls):
a. Refer to Division 23 Section 230913 and 230993 for terminal unit controllers and sequences of operation.

2. Control Sequence:
   a. See section 230993 - SEQUENCE OF OPERATIONS for terminal unit sequences of operation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that conditions are suitable for installation.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install the inlets of air terminal units and air flow sensors a minimum of four duct diameters from elbows, transitions, and duct takeoffs.

C. Provide ceiling access doors or locate units above easily removable ceiling components.

D. Support units individually from structure in accordance with SMACNA (SRM). See Section 23 0548.
   1. See Section 230548.

E. Embed anchors in concrete in accordance with ASTM E488/E488M.

F. Do not support from ductwork.

G. Connect to ductwork in accordance with Section 233100.

H. Verify that electric power is available and of the correct characteristics.

3.03 ADJUSTING

A. Reset volume with damper operator attached to assembly allowing flow range modulation from 100 percent of design flow to zero percent full flow.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Provide manufacturer's field representative to instruct and observe field-assembled components and equipment installation, including connections and to assist in field testing. Report results in writing.
   1. Leak Test:
      a. After installation, fill water coils and test for leaks.
      b. Repair leaks and retest until no leaks exist.
   2. Operational Test:
      a. After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
      b. Test and adjust controls and safeties.
      c. Replace damaged and malfunctioning controls and other equipment.
      d. Remove and replace malfunctioning units and retest as specified above.

3.05 CLEANING

A. Vacuum clean coils and inside of units.

3.06 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals, for closeout submittals.

B. See Section 017900 - Demonstration and Training, for additional requirements.

END OF SECTION 233600

SECTION 233700
AIR OUTLETS AND INLETS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Diffusers:
   1. Perforated face ceiling diffusers.
   2. Rectangular ceiling diffusers - Multilouvered Type.
   3. Rectangular ceiling diffusers - Plaque Type
   4. Linear Slot ceiling diffusers.
   5. Ceiling-Integral Continuous Linear Diffuser

B. Registers/Grilles:
   1. Ceiling mounted, perforated face exhaust and return registers/grilles
   2. Ceiling-mounted, exhaust and return register/grilles.

1.02 RELATED REQUIREMENTS

A. Section 230549 - Noise Control and Acoustical Performance

1.03 REFERENCE STANDARDS

A. ASHRAE Std 70 - Method of Testing the Performance of Air Outlets and Air Inlets 2023.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for equipment required for this project. Review outlets and inlets as to size, finish, and type of mounting prior to submission. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

C. Project Record Documents: Record actual locations of air outlets and inlets.

1.05 QUALITY ASSURANCE

A. Test and rate air outlet and inlet performance in accordance with ASHRAE Std 70.

PART 2 PRODUCTS

2.01 RECTANGULAR CEILING DIFFUSERS - MULTI-LOUVERED TYPE

A. Manufacturers:
   1. Anemostat Products; a Mestek company.: Model EPL
   2. Titus.: Model TMS
   3. Price Industries.: Model SCD

B. Type: Provide square, stamped, multi-core and multi-louvered diffuser to discharge air in 360 degree, one way, two way, three way, and four way pattern with sectorizing baffles where indicated.

C. Connections: Round.

D. Frame: Provide surface mount and inverted T-bar type. In plaster ceilings, provide plaster frame and ceiling frame.

E. Fabrication: Steel with baked enamel finish.

F. Color: As selected by Architect from manufacturer's standard range.

G. Accessories: Provide radial opposed blade and butterfly volume control damper; removable core and sectorizing baffle with damper adjustable from diffuser face.

2.02 RECTANGULAR CEILING DIFFUSERS - PLAQUE TYPE

A. Manufacturers:
   1. Anemostat Products; a Mestek company.: Model PG Paragon.
   2. Titus: Model OMNI.
   3. Price Industries.: Model SPD.

4. Krueger-HVAC; _____: Model PLQ.
5. Metalaire, a brand of Metal Industries Inc; _____: Model 5750.
6. Substitutions: See Section 016000 - Product Requirements.

B. Type: Provide square, architectural plaque type diffuser to discharge air in 360 degree, one way, two way, three way, and four way pattern with sectorizing baffles where indicated.

C. Face: 22 gauge minimum, Steel with baked enamel finish.

D. Back Pan: 22 gauge, Steel with baked enamel finish.
1. Insulation: Factory installed R-6 insulation with vapor barrier.

E. Connections: Round.

F. Frame: Provide surface mount and inverted T-bar type. In plaster ceilings, provide plaster frame and ceiling frame.

G. Fabrication: Steel with baked enamel finish.

H. Color: As selected by Architect from manufacturer's standard range.

I. Accessories: Provide butterfly or radial opposed blade volume control damper; removable core and sectorizing baffle with damper adjustable from diffuser face.

2.03 PERFORATED FACE CEILING DIFFUSERS

A. Manufacturers:
1. Anemostat Products; a Mestek company.: Model CG.
2. Titus: Model PAS.
3. Price Industries.: Model PDF.
4. _____.
5. Substitutions: See Section 016000 - Product Requirements.

B. Type: Square, Perforated face with fully adjustable pattern and removable face.

C. Face: Perforated plate, full face size, shall be constructed of minimum 22 gauge steel with not less than a 50% free area pattern. Perforations shall be 3/16” diameter holes staggered on 1/4” centers. Face plate shall be hinged or removable from the back pan by concealed spring clips.
1. Face plate shall be flush with frame.

D. Pattern Controllers: Adjustable, attached to inside face. Configurable in the field for 1, 2, 3, or 4 way discharge air pattern. Pattern adjustment shall be made by rotating the face-mounted controllers.

E. Back Pan: Factory installed one-piece stamped back pan with a square or round neck suitable for duct connection. Include earthquake loops.
1. Insulation: Factory installed R-6 insulation with vapor barrier.

F. Frame: Surface mount type. In plaster ceilings, provide plaster frame and ceiling frame.

G. Fabrication: Steel with steel frame and baked enamel finish.

H. Fabrication: Stainless steel.

I. Color: As selected by Architect from manufacturer's standard range.

J. Accessories:
1. Butterfly or radial opposed blade damper with damper adjustable from diffuser face.

2.04 CEILING LINEAR SLOT DIFFUSERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Anemostat Products; a Mestek company.: Model SLAD
2. Titus.: Model ML-37; ML-38; ML-39; ML-40
3. Price Industries.: Model SDS; SDR; SDC

B. Type: Continuous Indicated wide slot, indicated slots wide.

C. Pattern Controllers: Adjustable 180 degree, 24 to 36 inches o.c. for left and right and horizontal and vertical throw adjustment.

D. Fabrication: Aluminum extrusions with factory finish.

E. Color: To be selected by Architect from manufacturer's standard range.

F. Frame: 1 1/8 inch margin with concealed mounting and gasket, mitered end border. Other types as indicated.

G. Plenum: Integral, galvanized steel, un-insulated.

H. Other Features:
1. Painted interior.
2. Blank-offs.
3. Mitered tees
4. Mitered corners.
5. End Caps
6. Mitered End Borders
7. Spacers
8. Alignment Pins

2.05 CEILING-INTEGRAL CONTINUOUS LINEAR DIFFUSER - ARCHITECTURAL TYPE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Anemostat Products; a Mestek company.: Free Flo Model FFS, FFSR
2. Titus.: FlowBar Model FL-10; FL-15: FL-20; FL-25; FL-30
3. Price Industries.: Model CF or CFC; Styles AS or JS or RT as indicated

B. The linear diffusers shall be capable of supporting the ceiling system.
1. Linear diffusers supported by screws in the flanges or from air plenums are unacceptable.
2. For lay-in ceiling, provide hanger support clips that are integral with the linear slot diffusers to allow the linear diffusers to be supported from the building structure.
3. For hard ceilings, provide clips that are integral with the linear slot diffusers to allow the diffusers to be secured directly to the ceiling framing.

C. Slot Width: 1 inch (25 mm) or as indicated. Number of slots as indicated.

D. Straight and curved sections as required to accommodate layout.

E. Pattern Controllers: 24 inches (600 mm) o.c. for left and right and horizontal and vertical throw adjustment.

F. Material: Aluminum, extruded, heavy wall.

G. Finishes:
1. Exterior: Standard white.
2. Interior: Standard black.

H. Throw: Standard.

I. Mounting: Ceiling.

J. Plenum: Noninsulated.

K. Other Features:
1. Painted interior.
2. Blank-offs.
3. Mitered tees
4. Mitered corners.
5. End Caps
6. Mitered End Borders
7. Spacers
8. Spline Support Clips

2.06 CEILING EXHAUST AND RETURN REGISTERS/GRILLES

A. Manufacturers:
   1. Anemostat Products; a Mestek company.: Model 30
   2. Titus.: Model 23RL
   3. Price Industries.: Model 500

B. Type: Streamlined blades, 3/4 inch minimum depth, 3/4 inch maximum spacing, with blades set at 45 degrees, horizontal face.

C. Type: Streamlined blades, 3/4 inch minimum depth, 3/4 inch maximum spacing, with blades set at 0 degrees, horizontal face.

D. Frame: 1-1/4 inch margin with countersunk screw mounting.

E. Fabrication: Steel with 20 gauge, 0.0359 inch minimum frames and 22 gauge, 0.0299 inch minimum blades, steel and aluminum with 20 gauge, 0.0359 inch minimum frame, or aluminum extrusions, with factory baked enamel finish.

F. Fabrication: All aluminum with 20 gauge, 0.0359 inch minimum frame, or aluminum extrusions, with factory baked enamel finish.

G. Fabrication: Stainless steel with 20 gauge, 0.0359 inch minimum frames and 22 gauge, 0.0299 inch minimum blades.

H. Color: To be selected by Architect from manufacturer's standard range.

I. Damper: Integral, gang-operated, opposed blade type with removable key operator, operable from face.

2.07 PERFORATED FACE CEILING RETURN AND EXHAUST REGISTERS/GRILLES

A. Manufacturers:
   1. Anemostat Products; a Mestek company.: Model CG, 3P.
   2. Titus: Model PAS, PAR.
   3. Price Industries.: Model PDF, 10 Series.
   4. _____.
   5. Substitutions: See Section 016000 - Product Requirements.

B. Type: Square, Perforated face.

C. Face: Perforated plate, full face size, shall be constructed of minimum 22 gauge steel with not less than a 50% free area pattern. Perforations shall be 3/16” diameter holes staggered on 1/4” centers.
   1. Face plate shall be hinged or removable from the back pan by concealed spring clips.
   2. Face plate shall be flush with frame.
   3. Face plate shall be dropped face for tegular or dropped face ceiling tiles.

D. Back Pan: Factory installed one-piece stamped back pan with a square or round neck suitable for duct connection. Include earthquake loops.

E. Frame: Inverted T-bar type. In plaster ceilings, provide plaster frame and ceiling frame.

F. Fabrication: Steel with steel frame and baked enamel finish.

G. Color: As selected by Architect from manufacturer's standard range.

H. Accessories:
   1. Butterfly or radial opposed blade damper with damper adjustable from diffuser face.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Check location of outlets and inlets and make necessary adjustments in position to comply with architectural features, symmetry, and lighting arrangement.

C. Install diffusers to ductwork with air tight connection.

D. Provide balancing dampers on duct take-off to diffusers, and grilles and registers, despite whether dampers are specified as part of the diffuser, or grille and register assembly.

E. Only four (4) way diffusers shall be provided. Provide sheetmetal blank off as required for 1 way, 2 way or 3 way diffusers.

F. Noise level at noted capacities shall not exceed criteria specified in Section 230549 - Noise Control and Acoustical Performance. Diffusers shall be suitable for operation at 5 percent excess and 25 percent less then noted capacity. Provide blanking for proper coverage and blow without producing objectionable noise or air motion at occupied level. Finish shall match color sample as approved:

G. Linear diffusers: Frame types shall mate with ceilings. Provide means to neatly butt and align units to give continuous appearance without butting flanges. No screw holes or welded corners visible on diffusers or frames will be permitted. Air volume shall be adjustable through air supply face without requiring removal of face panel. Provide blanked sections for inactive lengths. Provide plaster frames and opposed blade volume dampers with remote cable operators where noted. Refer to Architectural Drawings for mounting details and overall lengths. Finish shall match color sample as approved:

END OF SECTION 233700

SECTION 237315
CUSTOM CENTRAL STATION AIR HANDLING UNITS

<<<< UPDATE NOTES

PART 1 GENERAL

2.01 SECTION INCLUDES

A. Custom Fabrication for Outdoor Installation
B. Casing construction.
C. Fan sections.
D. Coil sections.
E. Humidifier sections.
F. Filter and air cleaner sections.
G. Damper sections.
H. Airflow measurement.
I. Total energy recovery wheel sections.
J. Access sections.
K. Turning and discharge plenum section.

2.02 RELATED REQUIREMENTS

A. Section 230513 - Common Motor Requirements for HVAC Equipment.
B. Section 23 0515 - Variable Frequency Motor Controllers.
C. Section 23 0547 - Vibration Controls for HVAC.
D. Section 230593 - Testing, Adjusting, and Balancing for HVAC.
E. Section 230719 - HVAC Piping Insulation.
F. Section 233300 - Air Duct Accessories.
G. Section 233416 - Centrifugal HVAC Fans.
H. Section 238415 - Steam Humidifiers.
I. Section 260583 - Wiring Connections: Electrical characteristics and wiring connections.

2.03 REFERENCE STANDARDS

A. ABMA STD 9 - Load Ratings and Fatigue Life for Ball Bearings 2015.
B. ABMA STD 11 - Load Ratings and Fatigue Life for Roller Bearings 2014.
C. AHRI 260 - Sound Rating of Ducted Air Moving and Conditioning Equipment 2011.
D. AHRI 410 - Forced-Circulation Air-Cooling and Air-Heating Coils 2001 (R2011).
E. AHRI 430 (I-P) - Performance Rating of Central Station Air-Handling Units 2014.

2.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data:
   1. Published Literature: Indicate dimensions, weights, capacities, ratings, gauges and finishes of materials, short circuit rating, electrical characteristics and connection requirements.
      a. Include short circuit study to support AIC ratings.
   2. Unit and component equipment performance data.
   3. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.
   4. Fans: Performance and fan curves with specified operating point clearly plotted, power, RPM.
   5. Sound Power Level Data: Fan outlet and casing radiation at rated capacity. Fan manufacturer shall provide sound power level ratings for fans tested and rated in accordance with AMCA Standards 300 and 301. Sound power ratings shall be in decibels (reference 10-12 watts) in eight octave bands.
   6. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring, clearly indicating factory-installed and field-installed wiring.

C. Sustainable Design Documentation: Submit manufacturer's product data on refrigerant used, showing compliance with specified requirements.

D. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, coil support details, piping connection sizes and locations, access and door and window sizes and elevations, and electrical characteristics and connection requirements.

E. Manufacturer's Instructions: Include installation instructions.

F. Operating instructions and associated data.

G. Maintenance Data: Include instructions for lubrication, filter replacement, motor and drive replacement, spare parts lists, and wiring diagrams.

H. Ancillary manufacturer provided piping and equipment supports.

I. Drain pan configuration and details

J. Manufacturer's provided piping

K. Delegated-Design Submittal: For vibration isolation; and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
   2. Design Calculations: Calculate requirements for selecting vibration isolators; and seismic restraints and for designing vibration isolation bases.

L. Seismic Qualification Certificates: For air-handling units, accessories, and components, from manufacturer. See 230548 - Vibration and Seismic Controls for HVAC, for additional requirements
   1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

M. Manufacturer shall submit a line by line statement of compliance or non-compliance for each clause in this specification.

N. Operating and Maintenance Data

O. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Fan Belts: for each unit of each type and size.
   3. Extra Filters: One set for each unit of each type and size.

2.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to SEI/ASCE7
   1. The term "withstand" means the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified; and the unti will be fully operational after the seismic event>>.

C. Factory Testing
   1. The units shall be tested by the unit manufacture prior to shipping for the following:
      a. Casing Leakage Test
      b. Airflow And Static Capability Test
      c. Panel Deflection Test
      d. AHU Factory Fan Vibration Test

2.06 REGULATORY REQUIREMENTS

A. Products Requiring Electrical Connection: Listed and classified by UL or testing firm acceptable to authority having jurisdiction as suitable for the purpose specified and indicated.

2.07 DELIVERY, STORAGE, AND HANDLING

A. Accept products on site in factory-fabricated protective containers, with factory-installed shipping skids and lifting lugs. Inspect for damage.

B. Units shall be delivered in one piece unless indicated otherwise. Where building constraints, unit size or trucking limitations require that units ship in more than one piece, the manufacturer shall indicate all split points on the shop drawings. All items shipped loose such as filters, steam humidifier assemblies, caulking, etc. shall be itemized on the packing slip and be suitably secured in the unit or on a separate protected pallet.
   1. Each piece or assembly of pieces shall be clearly marked and refer to manufacturer assembly drawing. Provide factory personnel or factory-trained and authorized personnel to supervise. Manufacturer shall guarantee the performance of the field assembled unit. Approval by factory personnel shall confirm that installing contractor followed all assembly procedures and that unit will perform as specified.

C. Store in clean dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

D. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

2.08 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide minimum one year manufacturer warranty covering repair or replacement due to defective materials or workmanship.

PART 2 PRODUCTS

3.01 MANUFACTURERS

A. Venmar

B. Ventrol,

C. Temtrol

D. Huntair

3.02 REGULATORY REQUIREMENTS

A. Comply with NFPA 70 and requirements of authorities having jurisdiction.

B. Products Requiring Electrical Connection: Listed and classified by UL (DIR) or testing firm acceptable to authority having jurisdiction suitable for the purpose specified and indicated.

3.03 UNIT CASING CONSTRUCTION - CUSTOM

A. Full Perimeter Support Base Rail:
   1. The unit base frame manufactured with electrostatic pre-primed powder-coated rectangular structural steel or aluminum tubing and cross support members. The base rails shall be fitted with bolted removable lifting lugs.
   2. Provide full perimeter support base rail of sufficient height to raise unit for external trapping of condensate drain pans.
   3. Air handling units are to be provided with integral or additional structural steel base to accommodate the additional height requirements for the cold and/or hot condensate piping discharge from the unit to raise the unit up to accommodate the trap height, pump inlet connection height and priming. Coordinate height requirement with field conditions but not less than 10 inches high.
   4. Where units are not mounted on curbs or where structural steel dunnage does not provide full perimeter support, base rail shall be of sufficient strength and within allowable deflection to support point loading due to mounting on vibration isolators.

B. Unit Flooring and Floorplate
   1. Construct with sufficient strength to support expected people and equipment loads associated with maintenance activities.
   2. Caulk and seal floor seams water and airtight..
   3. The entire unit floor shall be insulated between floor and underfloor liners with minimum 4 inch thick insulation.

4. The underfloor exterior liner shall be G-90 galvanized steel or aluminum and be recessed to allow for air circulation under the unit.
5. Floor Plate: Galvanized steel except provide Stainless steel for sections housing cooling coils, energy recovery equipment and humidifiers.
    a. Provide add alternate for aluminum treadplate or diamond treadplate.
    b. Provide add alternate for drainable floor sections in each section of the unit piped to the exterior (by the AHU manufacturer) to the outside of the casing.
6. Maximum deflection of floor shall be L/360 at design loading (L=span in inches). Minimum floor design load shall be at least 150 lbs/sq.ft. distributed load and maximum point load on floor shall be 300 lbs over 1 square foot.
7. Provide add alternate for drainable floor sections in each section of the unit piped to the exterior (by the AHU manufacturer) to the outside of the casing.

C. Unit Walls and Roof:
1. Construct of thermally broken, 4-inch thick, insulated, double-walled panels.
2. Provide mid-span, no through metal, internal thermal break.
3. Panel structural strength
    a. Maximum deflection of walls and roof shall be L/240 at +/- 12” w.c.
    b. Deflection is worst case at the center of wall and roof span.
    c. Minimum roof and wall load shall be 75 lbs/sq.ft. distributed load.
    d. Maximum point load on roof shall be 300 lbs over 1 square foot.
4. Casing Insulation:
    a. Provide unit with one of the following insulation types sandwiched between inner and outer cabinet layers:
        1) Polyurethane injected foam, minimum 2.5 PCF and a minimum thermal conductivity (C) of 0.154 BTU in/hr sq.ft°F. The foam insulation shall have an ozone depletion potential of 0, a global warming potential of 0 and is VOC exempt.
5. Casing Panels
    a. Formed and reinforced 4-inch thick insulated wall and roof panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.
    b. The panel outside shall be solid 16-ga, G-90 galvanized steel, double die-formed 4" thick panel secured with zinc plated fasteners.
    c. The panel inside liner shall be solid 20-ga, G-90 galvanized steel except for sections housing cooling coils, heat recovery wheels and coils and humidifiers which shall be Type 304 stainless steel. Liner shall be secured with zinc plated sheet metal screws to outside casing.
    d. The unit construction shall be thermal break design with gasket meeting NFPA 90 A and B.
    e. The insulated panels shall meet fire hazard classification of 25/50 tested per ASTM E84 for flame and smoke spread, to meet NFPA 90A.
    f. There shall be no condensation on the unit exterior at coincident ambient conditions of 105 degree F DB / 80 degree F WB.
    g. Entire unit cabinet casing shall be able to withstand 10 inches w.g. positive and negative static operating pressure.
    h. Cabinet deflection shall not exceed L/240 on 4” wall units. Provide factory testing. A written test report shall be prepared by the manufacturer and issued to the Owner’s representative.
6. Casing Leakage Requirements:
    a. Seal joints and provide airtight access doors so that air leakage does not exceed one percent of design flow at the design casing pressure. Provide factory testing. A written test report shall be prepared by the manufacturer and issued to the Owner’s representative
    b. Leakage test will be conducted at 1.5 times design static pressure to a maximum of 12 in.w.g.

D. Access Doors and Panels and Sections:
   1. Construction, thermal and air pressure performance same as casing.
      a. The door frame to include a built-in no-through-metal high density resin barrier and a perimeter gasket. The door gasket to be seamed together at each corner to prevent leakage through the door. Door is attached to the unit with 3 axes adjustable stainless steel hinges, minimum 3. Doors shall open against higher pressure side.
   2. Provide surface mounted handles on hinged, swing doors with handles on both sides of casing.
   3. Provide shatterproof viewing window designed to withstand operating pressures.
      a. Dual-paned tempered glass with vacuum seal windows, molecular sieve sealant and thermally broken frames shall be supplied.
   4. Size: At least 24 inches wide by 60 inches high or unit height if unit casing is less than 60" high.
   5. Access sections shall be a minimum of 30 inches in length unless otherwise indicated to accommodate personnel access and servicing.
   6. Locations and Applications:
      a. Fan section(s)
      b. Access section(s)
      c. Coil section(s)
      d. Energy Recovery Wheel and devices
      e. Humidifier section(s)
      f. Damper section(s)
      g. Filter section(s)

E. Outdoor Unit Roof:
   1. Factory install single layer outer roof above inner roof.
   2. Slope at a minimum of 0.125 inches per foot from one side of unit to the other side, or from center to sides of unit.
   3. Roof assembly to overhang each unit wall or base rail to facilitate water runoff and prevent water intrusion into unit.
      a. When mounted on roof curbs, roof assembly to overhang each curb to facilitate water runoff and prevent water intrusion into roof curb-to-base connection.
   4. Roof system shall support a minimum snow load of 50 lbs per sq foot or as per code requirements

F. Outside Air and Exhaust Air Weather Hood:
   1. Fabricate from same material as casing outer panel.
   2. Extend hood past perimeter of unit casing opening so as not to instruct airflow path.
   3. Paint hoods with same finish as external surface of outdoor units.
   4. Provide inlet hood for each outside air inlet with a moisture eliminator to prevent entrainment of water into the unit from outside air.
      a. Moisture Eliminator: Type 304 stainless steel mesh, 1 inch thick in rigid frame as manufactured by Mistop, Inc., or equal. All hardware is to be made of stainless steel materials. Pressure drop shall be less than 0.1" S.P. at 500 FPM with 99% moisture removal efficiency. Provide when maximum air intake face velocities exceed 500 fpm.
   5. Provide exhaust hoods for each exhaust air opening.
   6. Size each hood for 100 percent of nominal outdoor air and exhaust air damper capacities.
   7. Protect each hood with ½ inch mesh bird screen.

G. Drain Pan Construction:
   1. Provide cooling coil, humidifier, and heat recovery coil/wheel sections with an insulated, double wall, 18-ga., Type 304 stainless steel drain pan complying with ASHRAE Std 62.1 for indoor air quality and sufficiently sized to collect all condensate.
      a. All seams shall be fully and continuously welded.
   2. Pans shall extend sufficiently upstream and downstream of coils to capture all condensate and moisture carryover. But not less than 24 inch of coil and down spouts for cooling coil banks more than one coil high.

a. Pans shall extend full width of unit to catch any condensation from associated coil piping, coil return bends and coil headers.
b. For stacked coils, provide intermediate drain pans/troughs under each coil. Pipe drains, one each end of trough, to spill to main drain pan.

3. Slope in two planes to promote positive drainage and eliminate stagnate water conditions.
4. Locate outlet of sufficient diameter at lowest point of pan to prevent overflow at normal operating conditions.
   a. Drain connections shall not be less than stainless steel 1-1/4” MPT connection. Provide at least one on each side of unit at each pan.
5. Provide threaded drain connections constructed of drain pan material, extended sufficient distance beyond the base to accommodate field installed condensate drain trapping.
6. The cooling coil condensate for roof mounted units shall be routed from the drain pan outlet location within the height of the base rail, and under the maintenance vestibule corridor floor if vestibule provided, and outside of the casing for P-trap installation by the mechanical contractor for extension to appropriate drain location. Manufacturer shall provide all piping from coil internal to the unit thru casing penetration to the outside.

H. For units with ducted bottom inlets and/or outlets, provide steel or aluminum walking grate on structural supports to cover openings.

I. Louvers: Where intake and exhaust hoods are not indicated, provide 4 inch deep storm proof, drainable louvers and with 1/2 inch mesh, 0.04 inch galvanized wire bird screen in frame, and bearing AMCA Certified Ratings Seal in accordance with AMCA 500-L.

J. Marine Lights:
1. Provide factory-mounted, water- and dust-resistant LED fixture(s) for each section of unit, of non-ferrous metal housing, shield and with glass or polycarbonate lens.
   a. Factory wired to a single switch within factory provided service module.
   b. Instant on white light with minimum 8000 hour service life.
   c. Locate at ceiling or upper sidewall so as to not impinge on equipment servicing or access.
   d. Illumination level shall be 50 footcandles at floor of casing.
2. Lights shall be controlled by switches located on exterior of casing at each section. Each light will have its own switch.
3. Provide factory installed service module including GFCI receptacles independent from load side designed to receive power from field supplied 120 volt single-point power source. Provide a minimum of 3 receptacles.
4. Conduit for lights and outlets shall be electrical metallic tube (EMT). All junction boxes shall be gasketed.

K. Service Platforms
1. Service platforms where required by Code or Authority Having Jurisdiction or Owner shall be provided by work of Division 1.

L. Finish:
1. Outdoor Units:
   a. Coat external surface of unit casing with primer and baked enamel paint finish.
   b. Comply with salt spray test in accordance with ASTM B177/B177M.
   c. Color: Manufacturer's standard color.

3.04 FAN SECTIONS

A. General
1. Type: Air foil, single width, single inlet, centrifugal, plenum type fans, conforming to AMCA 99. Refer to Section 23 3416
2. Performance Ratings: Determined in accordance with AMCA 210 and labeled with AMCA Certified Rating Seal. Make appropriate allowances for the effects on fan performance of all installation conditions including plenum enclosures and inlet and discharge arrangements so that actual installed fan performance equals that specified.
3. Fans shall be non-overloading and operate stably without surging at design conditions.

4. Fan characteristic curves provided by manufacturer must be such that the fan operating point:
    a. Is to the right of the peak efficiency
    b. Is on the steep part of the fan curve, such that an increase in static pressure over the specified duty results in not more than the same percent decrease in volume (CFM) and does not affect the stability of fan operation.
    c. Is no greater than 60 to 70 percent of the peak static pressure.
    d. Has the ability to provide an allowable increase in fan speed of 15 percent above the design point without surging or increasing the class of fan.
    e. Submit fan selection with system curve indication, operating point and the "DO NOT SELECT TO THE LEFT OF THIS CURVE".
        1) In addition to operating point indication, fan curve shall also include the family of all RPM curves for selected fan and include minimum and maximum RPM operating speeds.
5. Sound Ratings: AMCA 301; tested to AMCA 300 and label with AMCA Certified Sound Rating Seal.
6. Bearings: Self-aligning, grease lubricated, with lubrication fittings extended to exterior of casing with copper or stainless steel tube and grease fitting rigidly attached to casing.
    a. Bearings are to be grease lubricated, precision anti-friction, self-aligning, foot-mounted pillow block design. Bearings shall be selected for an average minimum L-10 life of 40,000 hours (200,000 hour L-50 life) when rated at the fan's maximum cataloged operating speed.

B. Fan Arrangements
1. Fan and motor assemblies shall be designed for application in multiple fan arrays.
2. The fan array shall consist of multiple housed fans or “cells”, spaced in the air way tunnel cross section to provide a uniform air flow and velocity profile across the entire air tunnel cross section and components contained therein.
3. Provide each fan cell with spring type vibration isolators, seismically restrained when required, with required minimum deflection for mounting to fan array support structure.
4. Each fan and motor assembly shall be removable through access door(s) without removing the fan wheel from the motor. Factory mount motor on slide rails. Provide motor track or rigging davits for all AHU motors.
5. All fans in the multiple fan arrays shall be AMCA certified for performance per AMCA arrangement “A” testing configuration.
6. The submitted fan performance shall be inclusive of system effects attributed to the fan mounting arrangement, fan enclosures, back draft dampers, and all other fan appurtenances not considered when AMCA certified performance per AMCA arr. “A” is determined.

C. Fan Wheels and Assembly
1. Fans shall be plenum type consisting of housing, wheel, fan shaft, bearings, motor, drive assembly and support structure. Fans shall be selected not to exceed an RPM rating higher than 90% of the maximum class RPM.
2. Fans shall be steel airfoil wheel, Class III, direct drive arrangement and shall be individually housed. Fans shall be certified by AMCA for performance. Fan shall be housed in a “cell”.
    a. Support structures are to be fully assembled, heavy gauge, welded construction with integral mounting panel for inlet cone. Inlet cones shall be aerodynamically designed and spun providing a minimum separation of air flow.
3. Fan housing or “cell” shall be constructed of steel with perforated inner liner, melamine insulation, with either solid or perforated outer panels as required by application.
4. Each fan/motor assembly shall be statically and dynamically balanced.
5. Shafts are to be ASTM A-108 steel, grade 1040/1045, precision turned, ground and polished. The shaft's first critical speed shall be at least 120% of the fan's maximum operating speed. The drive end of the fan shaft shall be countersunk for tachometer readings.

D. Motors
   1. Motors shall comply with the requirements of Section 230513 - Common Motor Requirements for HVAC Equipment.
   2. All motors shall be standard foot mounted type, TEFC or TEAO motors selected at the specified operating voltage, RPM, and efficiency as indicated.
   3. Motors shall meet the requirements of NEMA MG-1 Part 30 and 31, section 4.4.2.
   4. All motors shall include permanently sealed bearings and shaft grounding means to protect the motor bearings from electrical discharge due to stray shaft current.

E. Drives:
   1. Comply with AMCA 99.
   2. Shafts: Solid, hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil. The drive end of the fan shaft shall be countersunk for tachometer readings.
   3. Fans shall be direct drive unless otherwise indicated.
   4. For V-Belt Drives: Cast iron or steel sheaves, dynamically balanced, bored to fit shafts, and keyed. Variable and adjustable pitch sheaves for motors 15 hp and under selected so required speed is obtained with sheaves set at mid-position; fixed sheave for 20 hp and over, matched belts, and drive rated as recommended by manufacturer or minimum 1.5 times nameplate rating of the motor.
      a. Belt Guard: Fabricate to SMACNA (DCS); 0.106 inch thick, 3/4 inch diamond mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation, with provision for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

F. Acoustical Performance
   1. The AHU unit shall provide the specified acoustical performance for the unit supply air discharge opening(s), return air opening(s), outside air opening(s) and exhaust air opening(s) as well as radiated through casing wall(s), roof(s), and floor(s).
   2. Coplanar silencer(s) and/or sound attenuator(s) shall be provided. Losses from sound attenuating devices shall be included in the fan performance selection.

G. Backdraft dampers
   1. Each fan in the fan array shall be provided with an integral back flow damper, gravity or barometric type, that prohibits recirculation or short-circuiting of air in the event a fan or multiple fans is stopped. Motorized dampers or other motorized devices submitted for back flow prevention are not acceptable.
   2. The system effect for the submitted back flow prevention device shall be included in the calculation to determine the fan TSP for fan selection and shall be indicated as a separate line item SP loss in the submitted fan selection data.

H. Fan Airflow Monitoring
   1. Each fan in an array shall have an air flow measuring sensor station with pressure sensing taps installed in the fan inlet cone for airflow monitoring capacity.
   2. Airflow Totalization: Each fan assembly shall be supplied with a complete flow measuring system, which shall indicate airflow in Cubic Feet per Minute both for each fan as well as total for all fans. The flow measuring station shall not obstruct the inlet of the fan and shall not effect fan performance flow or static or sound power levels.
   3. A surface mounted selectable display, located on the unit exterior adjacent to the variable frequency drive, shall provide CFM readout, and will provide a 4-20 ma output control signal that is proportional to the airflow rate in CFM for interface with the Building Management System (BAS) via Modbus, BACnet IP or BACNet MSTP communication protocol.

I. Variable Frequency Drive
   1. Refer to Section 23 0515.

J. External Motor Junction Box: Factory mount NEMA 3R external junction box and connect to extended motor leads from internally mounted motors.

1. Motor Wiring Conduit: Factory wire fan motor wiring to the unit mounted controllers.
2. All wiring shall be in conduit and shall be electrical metallic tube (EMT). All junction boxes shall be gasketed. Provide flexible metal conduit for final wiring connection to motors.

K. Flexible Duct Connections:
1. Provide flex connections where fan attaches to unit casing.
2. Refer to Section 233300.

3.05 COIL SECTIONS

A. Certify capacities, pressure drops, and selection procedures in accordance with AHRI 410.

B. Provide access to both sides of coils. Enclose coils with headers and return bends fully contained within casing. Coil removal/replacement through removable access panel or doors. Provide coils with safing blank off sheets to prevent bypass of unconditioned air. Provide sealing collars at casing penetrations of all piping.

C. Coil Support Structure
1. All coils shall be installed on racks and individually self-supported and individually removable.
2. All coils shall be mounted as high as possible within unit casing to facilitate installation and piping of condensate trap assemblies.
3. Safing, Supports and fasteners for cooling coils, humidifiers and heat recovery coils shall be Type 304 Stainless Steel.
4. Safing, Supports and fasteners for heating coils shall be Galvanized.
5. AHU manufacturer to provide chilled water, steam and hot water piping and supports inside casing. Piping to extend beyond casing for connections by mechanical contractor, and casing penetrations sealed by manufacturer. Refer to piping specifications sections for requirements.

D. Moisture Eliminator for Cooling Coils
1. Type 304 stainless steel mesh, 1 inch thick as manufactured by Mistop, Inc., or equal. All hardware is to be made of stainless steel materials. The eliminator section shall drain to cooling coil drain pan and troughs. Moisture eliminator shall have less than 0.1" S.P. at 500 FPM and have 99% efficient moisture removal.
2. Provide when cooling coil face velocities exceed 500 fpm or operating conditions create moisture carryover.

E. Refrigerant Evaporator Coils:
1. Performance Ratings: Tested and rated according to AHRI 410.
2. Casing: Die formed channel frame of ASTM A666, Type 316 stainless steel, minimum 0.0625 inch thick for flanged mounting, 3/8 inch mounting holes on 3 inch centers. Provide tube supports for coils longer than 36 inches.
3. Tubes: 5/8 inch OD ASTM B 743 seamless copper arranged in parallel or staggered pattern, expanded into fins, brazed joints.
4. Fins: Aluminum continuous plate type with full fin collars
5. Headers: Seamless copper tubes with silver brazed joints.
6. Liquid Distributors: Copper venturi type distributor with ASTM B88, Type L (ASTM B88M, Type B) seamless copper distributor tubes, 5/16 inch outside diameter, brazed joints; maximum 12 circuits per distributor.
7. Configuration: Down feed with bottom suction.
8. Testing: Air test under water at 450 psi for working pressure of 300 psi; clean, dehydrate, and seal with dry nitrogen charge.
9. Provide capillary tubes or thermostatic expansion valves for units of 6 tons capacity and less, and thermostatic expansion valves and alternate row circuiting for units 7.5 tons cooling capacity and larger.

F. Electric Coils:
1. Assembly: UL (DIR) listed and labeled, with terminal control box and cover, splice box, coil, casing, and controls.

2. Coil: Enclosed stainless steel tube, stainless steel fins, element of grade A coiled 80% nickel-20% chromium resistance wire centered in tubes and embedded in magnesium oxide or refractory material.
3. Coil: Exposed helical coil of 80% nickel-20% chromium resistance wire with refractory ceramic support bushings.
4. Casing: Die formed channel frame of minimum 16 gauge, 0.0598 inch galvanized steel with 3/8 inch mounting holes on 3 inch centers. Provide tube supports for coils longer than 36 inches.
5. Controls: Automatic reset thermal cut-out, built-in magnetic or mercury contactors control circuit transformer and fuse, manual reset thermal cut-out; air flow proving device; fused disconnect; load fuses.
6. Provide SCR for modulating control of heat output.

3.06 AIR COOLED DX HEAT PUMP & CONDENSING SECTION

A. GENERAL
1. Provide as part of the unit a fully integrated and fully functional air cooled heat pump cooling and heating system. Section and/or sections shall consist of evaporator cooling/heating coil, air cooled condensing unit, interconnecting insulated refrigerant piping internally routed, and interfacing operational controls. Refer to and coordinate with Controls Sections 230900 and 230993.

B. CONDENSER COILS
1. Coils: Aluminum fins mechanically bonded to seamless copper tubing. Provide sub-cooling circuits. Air test under water to 425 psig, and vacuum dehydrate. Seal with holding charge of nitrogen.
2. Coil Guard: PVC coat steel wire with lint screens.

C. FANS AND MOTORS
1. Vertical discharge direct driven propeller type condenser fans with fan guard on discharge. Equip with roller or ball bearings with grease fittings extended to outside of casing.
2. Weatherproof TEAO motors suitable for outdoor use, single phase permanent split capacitor or 3 phase, with permanent lubricated ball bearings and built in current and thermal overload protection. Refer to Section 23 0513.

D. COMPRESSORS
1. Compressor: Hermetic scroll type.
2. Mounting: Statically and dynamically balance rotating parts and mount on spring vibration isolators.
   a. Internally isolate hermetic units on springs.
3. Lubrication System: Reversible, positive displacement oil pump with oil charging valve, oil level sight glass, and magnetic plug or strainer.
4. Motor: Constant speed 3600 rpm suction gas cooled with electronic sensor and winding over temperature protection, designed for across-the-line starting. Furnish with starter.
5. Capacity Reduction Equipment: Suction valve unloaders, with lifting mechanism operated by electrically actuated solenoid valve, with unloaded compressor start; controlled from suction pressure.
6. Sump Oil Heater: Evaporates refrigerant returning to sump during shut down. Energize heater continuously when compressor is not operating.

E. REFRIGERANT CIRCUIT
1. Provide each unit with two independent refrigerant circuits, factory supplied and piped inside unit.
2. PIPING
   a. Copper Tube: ASTM B280, H58 hard drawn or O60 soft annealed.
      1) Type ACR
      2) ASTM B88 - Type K
      3) Fittings: ASME B16.22 wrought copper.
      4) Joints: Braze, AWS A5.8M/A5.8 BCuP silver/phosphorus/copper alloy

3. For each refrigerant circuit, provide:
   a. Filter dryer replaceable core type.
   b. Liquid line sight glass and moisture indicator.
   c. Thermal expansion valve for maximum operating pressure.
   d. Insulated suction and liquid lines.
   e. Suction and liquid line service valves and gauge ports.
   f. Liquid line solenoid valve.
   g. Charging valve.
   h. Discharge line check valve.
   i. Compressor discharge service valve.
   j. Condenser pressure relief valve.
4. For heat pump units, provide reversing valve, suction line accumulator, discharge muffler, flow control check valve, and solid-state defrost control utilizing thermistors.

F. CONTROLS
1. On unit, mount weatherproof steel control panel, NEMA 250, containing power and control wiring, molded case disconnect switch, factory wired with single point power connection.
   a. Factory mount disconnect switch on unit under provisions of Section 260583.
2. For each compressor, provide across-the-line starter, non-recycling compressor overload, starter relay, and control power transformer or terminal for controls power. Provide manual reset current overload protection. For each condenser fan, provide across-the-line starter with starter relay.
3. Provide safety controls arranged so any one will shut down machine:
   a. High discharge pressure switch (manual reset) for each compressor.
   b. Low suction pressure switch (automatic reset) for each compressor.
   c. Oil Pressure switch (manual reset).
4. Provide the following operating controls:
   a. Refer to Section 230993.

3.07 HUMIDIFIER SECTION

A. General: Capacities and selection in accordance with AHRI 610.

B. Steam Distribution : Short absorption manifold type humidifiers as manufactured by Vapac, or approved equal:
1. Manifold header: Constructed of type 304 stainless steel and installed at the center of the duct or air handler for a horizontal airflow installation. The header shall be mounted on Type 304 stainless steel support brackets, sloped to ensure condensate removal through the steam inlet connection without the use of a separate condensate connection/leg.
2. Dispersion tubes: The dispersion tubes constructed of type 304 stainless steel and welded to the header, closely spaced and spanning the width of the air handler or duct. The dispersion tubes spacing shall be optimized to provide uniform steam dispersion, and the required absorption distance. Each tube shall contain a single row of integrally formed holes facing the airflow for shorter absorption distances. The dispersion tubes shall be supplied with adjustable stainless steel support brackets.
3. Tube holes: Each hole shall be formed to extend the tube material internally in a cylindrical shape to get the driest steam from the center of the tube and prevent any condensation entrainment through the holes. Added plastic/resin nozzles are not acceptable. The spacing between holes shall be optimized, spanning the height of the tube and sized to ensure constant pressure inside every tube for even steam distribution.
4. Pressurized Manifold Steam Accessories:
   a. The appropriate steam valve, actuator, steam trap and strainer shall be shipped loose for field installation.
   b. The steam valve body should be made of bronze and the valve trim should be made of stainless steel for extended life.
   c. The valve modulating actuator should be electrical (24 Vdc). For electric valve actuators, the control signal should be 0-10 Vdc or 4-20 mA.

d. The steam trap should be of the Float and Thermostatic (F&T) type with a cast iron body. When using treated water (DI or RO), the trap should be of the stainless steel Inverted Bucket type.
e. The Y strainer should be made of cast iron, except when using treated water (DI or RO) where stainless steel Y strainer should be supplied.

3.08 FILTER AND AIR CLEANER SECTIONS

A. General:
1. Provide filter sections with filter racks, access door(s) for filter removal, and filter block-offs to prevent air bypass.
2. Filters shall be arranged in flat banks and with upstream servicing.

B. Filter Frame Assemblies
1. Construct of galvanized steel, designed and sized to have matching mounting holes so frames may be fastened together in a bank.
2. Frames shall have pre-installed closed cell neoprene gasketing so the filter will self-seal against. Provide latches, 4 per frame minimum to positively secure filters in frames.
3. Filter frames shall be provided with stiffeners for installation between each column of filter frames.
4. All filter holding frames in bank shall be sealed with caulk or gaskets in between them to prevent bypass air through the frames.
5. Provide additional structural support for reinforcement for attaching frame assembly to AHU casing, ductwork or building structure as well as complete safing and proper air seal.

C. Pleated Media Filters:
1. Media: 2 inch, 100 percent synthetic fibers, continuously laminated to a grid with water repellent adhesive, and capable of operating up to a maximum of 500 fpm without loss of efficiency and holding capacity.
2. Frame: Steel wire grid.
3. Minimum Efficiency Reporting Value: 8 MERV when tested in accordance with ASHRAE Std 52.2.

D. HEPA Filters:
1. Media: 12 inch continuously pleated, waterproof, micro-fiberglass; enclosed in a galvanized, steel frame with neoprene rubber seal applied to leaving air side, and capable of operating up to a maximum of 500 fpm without loss of efficiency and holding capacity.
2. Frame: Continuously welded, gasketed, front loaded filter frames, mounted inside section casing along with filter holding clips, requiring tooling to tighten and hold filter cells.
3. Minimum Efficiency: Not less than: 99.97 percent when tested in accordance with ASHRAE Std 52.2.
4. Refer to Section 234000.

E. Differential Pressure Gauges:
1. Provide factory installed dial type differential pressure gauge, mounted on casing outer wall, and fully piped to both sides of each filter to indicate status.
2. Provide each filter bank with pressure gauges across each bank, Dwyer Instruments Inc Series 2000 Magnehelic.
3. Maintain plus/minus 5 percent accuracy.

3.09 AUTOMATIC DAMPERS

A. Outside Air Intake, Exhaust/Relief Air, Return Air, Bypass Air: Provide functional section(s) to support the damper assembly for modulating the volume of outdoor; return; exhaust; and bypass air.

B. Dampers:
1. Low leakage Class 1A aluminum dampers as made by TAMCO or Ruskin CD50
2. Low leakage, double-skin, aluminum, airfoil design with metal or TPE compressible jamb seals and extruded-vinyl or EPDM blade-edge seals on each blade.

3. Provide with square or hexagonal blade shafts, frame-mounted linkage crank arms, jack shafts.
4. Frame of extruded aluminum channel, 12 gauge minimum.
5. Self-lubricating stainless steel or synthetic sleeve bearings.
6. Comply with ASHRAE Std 90.1 I-P for rated maximum leakage rate.
7. Provide leakage testing and pressure ratings in compliance with AMCA 500-D test methods.
8. Arrange in opposed-blade configuration unless otherwise noted.

3.10 AIRFLOW MEASUREMENT

A. Flow Meter:
1. Provide airflow measurement system to directly measure fan airflow or measure differential pressure that can be used to calculate airflow without interfering with submitted airflow performance and noise levels.
2. Accuracy: Plus/minus 5 percent (device and transmitter) when operating within the stable operating region of the fan curve.

B. Air Flow Measurement Station:
1. Provide factory installed, airflow measurement station tested in accordance with AMCA 611 and bearing the AMCA Ratings Seal for Airflow Measurement Performance.
2. Station Location: Install in outdoor; return; and exhaust opening to measure airflow.
3. Measurement Range: Minimum of 100 percent of unit nominal flow.
4. Operation: Provide low voltage signal corresponding to actual airflow for controlling and documenting airflow.
5. Accuracy: Plus/minus 5 percent;.
6. Thermal dispersion measurement system (Ebtron) or approved equal.
7. Provide air straightener if necessary to accommodate airflow conditions.
8. Provide in addition to airflow measuring stations as specified for plenum fans.
9. Refer to Controls Sections 230900 and 230993 for requirements.

3.11 HEAT RECOVERY WHEEL SECTIONS

A. General
1. Furnish and install the total energy recovery wheel, as manufactured by Innergy Tech Inc. or approved equal
2. The energy recovery wheel shall transfer both sensible and latent energies between outgoing and incoming air streams in a counter flow arrangement.
3. The energy recovery wheel shall be labeled for direction of air flow, exhaust and supply inlets and outlets.
4. The energy recovery wheel shall be a UL recognized component and bear the ULmark.
5. The energy recovery wheel shall comply with the requirements of UL723.
6. The energy recovery wheel shall bear the ARI 1060-2005 Standard Certified Product Seal.
7. Sensible, latent and total effectiveness along with pressure drop, EATR and OACF ratings, shall be clearly documented in the ARI Certified Product Directory (Standard 1060-2005).
8. Performance tests shall be conducted in accordance with AHSRAE Standard 84-91.

B. Media
1. The rotor media shall be made of aluminum with a minimum thickness of 2 mil.
2. All surfaces shall be coated with a non-migrating desiccant specifically developed for the water vapor transfer.
3. Desiccant to be a polymer hygroscopic coating with bactericide and be non-corrosive
4. The rotor shall be constructed of equal width alternate layers of corrugated and flat aluminum sheet material to create a flat and smooth surface.
5. MERV 8 type filters shall be used to protect inlet faces of the wheel.

C. Purge and Casing Assembly
1. The unit shall be provided with a factory set, but field adjustable, purge section designed to limit cross contamination.

2. The rotor shall be have a structural frame to limit deflection of the rotor due to air pressure differential to less than 1/16 of an inch.
3. The framing shall be made of heavy-duty welded tubular steel construction.
4. Framing shall be painted with polyester based enamel.
5. The cover panels shall be made of galvanized steel to prevent corrosion.
6. The cassette shall be mounted with removable cover panels for service access to the motor and drive.
7. The rotor shall be supported by pillow block bearings which can be maintained or replaced without removal of the rotor from its casing or the media from its spoke system.

D. Rotor seals
1. The rotor shall be supplied with non-contact labyrinth seals facing the media and with nylon contact seals on all other surfaces.
2. The seals shall be specifically designed to compensate for pressure fluctuations.
3. The seals shall be adjustable to ensure proper sealing.

E. Rotor frame system
1. Rotor spoke system shall be a segmented design.
2. The rotor spoke system shall be made of aluminum materials providing the structural integrity required at design pressure differentials.
3. The rotor hub shall be made of extruded aluminum, without welding, for precision machining and stiffness.

F. Drive system
1. The rotor shall be driven by a high performance link belt made of polyurethane elastomer reinforced with polyester.
2. An A/C inverter duty motor shall drive the rotor.
3. Wheel shall be perimeter driven.
4. Speed reduction is by controlling the motor frequency via VFD controllers.
5. Speed reducer shall be permanently lubricated.

3.12 TURNING AND DISCHARGE PLENUM SECTION

A. Provide plenum to efficiently turn and discharge air.
1. Scale plenum vertical height to accommodate discharge duct height.
2. Scale plenum horizontal length to accommodate required dimensional constraints.

B. Provide all openings for ductwork connections with gasketed channel or angle iron framing for flanged connections of ductwork.

3.13 ELECTRICAL AND CONTROLS

A. Refer to Section 230900 - HVAC INSTRUMENTATION AND CONTROLS and Section 230993 - SEQUENCE OF OPERATIONS for air handling unit control systems.

B. Short Circuit Current Rating:
1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.
2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
3. Label equipment utilizing series ratings as required by NFPA 70.
4. Provide internal ground fault protection such that a ground fault in any of the motor circuits does not cause a system shutdown.

C. Control Panel
1. Each fan motor shall be individually wired to a motor control panel containing motor overloads and VFD(s). VFD configuration shall be such that each motor shall have its own VFD as required for FANWALL System Optimization Controls.
2. As an alternate provide two VFDs, each of which shall control all fans in array in parallel. The VFDs shall be arranged for lead/lag operation such that the failure of one VFD shall switch operation to the other VFD. Lead/lag operation shall also enable continued operation of fans while other VFD is offline for maintenance, servicing and the like.

3. Each control panel shall have a single point electrical power connections. Units with supply and return fan walls will have two power connections.
4. Wire sizing shall be determined, and installed, in accordance with applicable NEC standards and local code requirements.
5. The multiple fan array electrical panel shall continuously monitor required flow and pressure and include system optimization controls to actively control fan speed and to enable and disable fans in the multiple fan array to achieve peak efficiency for the fan system at any given point of system operation.
6. Multiple fan array system optimization controls shall be provided by the AHU unit manufacturer for multiple fan array flow and pressure controls, to accept an input control signal from the BMS for static pressure and/or flow for proper operation of the system optimization controls.
7. The AHU unit manufacturer shall provide a single communication interface with the BAS, utilizing BacNet or Lon.
8. Means for monitoring and controlling individual fan and motor status for each of the multiple fans and motors in the array shall be provided.
9. The multiple fan array control panel(s) shall be provided with means to indicate fan and motor status, operating mode, system flow rate and fan total static pressure, as well as connected and required HP at the current system flow and pressure conditions.
10. Status shall be displayed at the unit control panel and/or at the remote location of the building automation system control panel and interface screens.
11. The AHU unit shall be completely factory-wired, requiring only field wiring of main power wiring to the line side of the main power disconnect switch, and a separate 120/60/1 power supply with disconnect switch for receptacles and light fixtures.
12. Redundancy in the variable frequency drives shall be included, along with all necessary controls and devices to assure that in a fault condition for any drive, whether internal or external to the drive, the fan array shall maintain flow and pressure at the required fan operating speed at the time of the fault with no interruption in flow to the system affected.

D. Combination VFD - Disconnects:
1. Provide factory mounted, combination VFD - disconnect for each fan motor.
2. Refer to and provide in accordance with Section 23 0515 - Variable Frequency Motor Controllers
3. Factory mount in full metal enclosure and wire to fan motor.
4. Mount VFD-disconnect on fan section in a NEMA 3R enclosure within a dedicated controls section or housed fan section.
   a. Internal Enclosure Construction Characteristics:
      1) Integral part of unit casing to allow for thermal venting to casing interior.
      2) Accessible from unit exterior via access door.
      3) Construction of access doors same throughout unit.
5. Include circuit breaker disconnect with through-the-door interlocking handle for externally mounted starters; beside--the-door interlocking handle for internally mounted; spring loaded, and designed to rest only in the full and lockable ON or OFF state.
6. Allow enclosure entry via a concealed defeater mechanism when the handle is in the ON position.
7. Include control transformer with sufficient capacity to support the following items:
   a. VFD and controls.
   b. Binary output on-off wiring.
   c. Analog output speed-signal wiring.
   d. Wires that interface between VFD and direct digital controller.
8. Provide bypass relays and bypass circuitry with VFD-OFF-BYPASS selector switch.

PART 3 EXECUTION

4.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine casing materials and equipment before air-handling unit installation. Reject materials and equipment that are damaged. Replace with new.

C. Examine roughing-in for piping systems and electrical services to verify actual locations of connections before installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

4.02 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Bolt sections together with gaskets.

C. Unit Support: Install unit level. Coordinate wall penetrations and flashing with wall construction. Secure AHUs to structural support with anchor bolts.

D. Install wind and seismic restraints according to manufacturer's written instructions. Wind and seismically restrained vibration isolation roof-curb rails are specified in Section 230548 - Vibration and Seismic Controls for HVAC - Mason

E. If fans do not have internal flex duct, Install flexible duct connections between discharge ductwork and air handling unit sections. Ensure that metal bands of connectors are parallel with minimum one inch flex between ductwork and fan while running.

F. Install assembled unit on vibration isolators. Install isolated fans with resilient spring mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating.

G. Arrange installation of units to provide access space around air-handling units for service and maintenance.

H. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.

I. Provide fixed sheaves required for final air balance for belt-driven fans.

J. Install piping adjacent to air-handling unit to allow service and maintenance. Make connections to coils with unions or flanges.

K. Connect condensate drain lines and extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.

L. Humidifiers
   1. Install gate valve and inlet strainer at supply connection of dry steam humidifiers, and inverted bucket steam trap to condensate return connection.

M. Refrigerant Coils:
   1. Provide sight glass in liquid line within 12 inches of coil.
   2. Install shutoff valve and union or flange at each supply and return connection.
   3. Provide connection to refrigeration piping system and evaporators. Comply with ASHRAE Std 15.
   4. Provide manual shutoff valves at each refrigeration system component (condenser, condensing unit, evaporator, branch controller, etc..) for service

N. Electric Duct Coils:
   1. Wire in accordance with manufacturer’s instructions and NFPA 70.

O. Field-wire each factory provided control for field installation.

4.03 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:
   1. Charge refrigerant coils with refrigerant and test for leaks.

2. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. HEPA-Filter Operational Test: Pressurize housing to a minimum of 3-inch wg (750 Pa) or to designed operating pressure, whichever is higher; test housing joints, door seals, and sealing edges of filter for air leaks according to ASME N510, pressure-decay method.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.
6. Prepare test and inspection reports.

4.04 CLEANING

A. Clean air-handling units internally on completion of installation, according to manufacturer's written instructions. Clean fan interiors to remove foreign material and construction dirt and dust. Vacuum clean fan wheels, cabinets, and coils entering air face.

B. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems, clean filter housings and install new, clean filters.

C. Replace filters immediately prior to occupancy according to the LEED EQ Credit 3.1, "Construction IAQ Management Plan."

4.05 ADJUSTING

A. Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

4.06 SYSTEM STARTUP

A. Provide manufacturer's field representative to perform systems startup.

B. Prepare and start equipment and systems in accordance with manufacturers' instructions and recommendations.

C. Adjust for proper operation within manufacturer's published tolerances.

D. Verify that shipping, blocking, and bracing are removed.

E. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.

F. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.

G. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.

H. Verify and adjust damper and valves for proper operation.

I. Comb coil fins for parallel orientation.

J. Verify that proper thermal-overload protection is installed for electric coils.

K. Install new, clean filters.

L. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

M. Supply initial charge of refrigerant and oil for each refrigeration system. Replace losses of oil or refrigerant prior to end of correction period.

N. Charge system with refrigerant and test entire system for leaks after completion of installation. Repair leaks, put system into operation, and test equipment performance.

O. Shut-down system if initial start-up and testing takes place in winter and machines are to remain inoperative. Repeat start-up and testing operation at beginning of first cooling season.

P. Provide cooling season start-up, and winter season shut-down for first year of operation.

4.07 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals, for closeout submittals.

B. See Section 017900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate operation of system to Owner's personnel.
   1. Use operation and maintenance data as reference during demonstration.
   2. Conduct walking tour of project.
   3. Briefly describe function, operation, and maintenance of each component.

D. Training: Train Owner's personnel on operation and maintenance of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of one day of training.
   3. Instructor: Manufacturer's training personnel.
   4. Location: At project site.

END OF SECTION 237315

SECTION 238415
STEAM HUMIDIFIERS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Dry steam humidifiers.

B. Stainless steel piping

1.02 RELATED REQUIREMENTS

A. Section 230993 - SEQUENCE OF OPERATIONS

B. Section 232213 - Steam and Condensate Heating Piping.

C. Section 232214 - Steam and Condensate Heating Specialties.

1.03 REFERENCE STANDARDS

A. ASME B16.9 - Factory-Made Wrought Buttwelding Fittings 2018.

B. ASME B16.11 - Forged Fittings, Socket-Welding and Threaded 2021.

C. ASTM A182/A182M - Standard Specification for Forged or Rolled Alloy and Stainless Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service 2023.

D. ASTM A312/A312M - Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes 2022a.

E. ASTM A403/A403M - Standard Specification for Wrought Austenitic Stainless Steel Piping Fittings 2022b.

F. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide catalog data indicating rated capacity, dimensions, duct and service connections, electric nameplate data and wiring diagrams.

C. Shop Drawings: Indicate layout of system and components.

D. Manufacturer's Instructions: Indicate installation instructions and recommendations.

E. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

F. Warranty: Submit manufacturer's warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section, with minimum three years of documented experience.

B. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc. as suitable for the purpose specified and indicated.

1.06 SHORT CIRCUIT CURRENT RATING:

A. All electrical equipment, starters and controller assemblies shall be provided with short circuit rating as follows:
   1. Provide controllers with listed short circuit current rating not less than.100,000 AIC unless approved by the engineer based on submitted short circuit study.
   2. Listed series ratings are acceptable, except where not permitted by motor contribution according to NFPA 70.
   3. Label equipment utilizing series ratings as required by NFPA 70.

1.07 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide two year manufacturer warranty for humidifier unit except the cylinder.

PART 2 PRODUCTS

2.01 HUMIDIFIER DISPERSION TUBES AND MANIFOLD ASSEMBLY

A. Manufacturers
1. Armstrong
2. DriSteem Corporation:
3. Nortec Industries
4. Substitutions: See Section 016000 - Product Requirements.

B. General
1. Humidifier dispersion tubes shall be multi-tube type mounted in a stainless steel panel. Tubes shall be arranged vertically or horizontally.
2. The humidifier shall be capable of removing condensate from the steam by means of a 304L stainless steel supply header/separator, for the purpose of providing condensate free steam.
3. A packaged steam injection type humidifier or multiple tube dispersion assembly ready for insertion into the duct or air handling unit.
4. The injection tubes shall be completely factory assembled and welded to a 304L stainless steel header/separator, ready for installation and piping connections.
5. Each segment is designed for duct mounting including stacking of header/separator/dispersion tube segments when necessary. For applications with horizontal dispersion tubes, all piping to be on one side of the duct or air handling unit.

C. Headers and Dispersion Tubes
1. Fabricated separator/header and multiple dispersion tube design of all welded stainless steel construction, O-rings or slip couplings are not permitted.
2. Each active tube is fitted with a series of stainless steel nozzles extending from the center of the tube. The nozzles are sized and spaced to accept steam from the separator/header and provide a dry and uniform discharge of steam.
3. The header/separator shall be designed with an internal baffle to assure equal steam flow to the injection tubes. The header/separator shall include an internal stainless steel screen to prevent objectionable noise due to pressure drop across the valve.
4. Steam shall be injected into the air stream through 304L stainless steel steam jacketed injection tubes. The tubes shall be steam jacketed to assure condensate-free vapor. The jacketing shall only be hot during a call for humidity, eliminating unwanted heat gain when no humidification is required. The steam emission ports shall be precision punched and shall be of sufficient size and number to provide constant and uniform distribution of steam over the entire width of the duct or air handling unit.

2.02 STAINLESS STEEL PIPE:

A. Up to 15 psig including condensate: ASTM A312/A312M, Type TP304L, seamless only, Schedule 40S for pipe less than 8 inches in diameter or Schedule 30S for pipe 8 inches and larger. Maximom 0.375 inch wall thickness.

B. Fittings 2-1/2 inches and Larger:
1. Stainless steel, buttweld type.
2. ASTM A403/A403M, Class WP-S, Grade WP 304L, seamless only, and ASME B16.9 of the same thickness as the adjoining pipe.

C. Fittings 2 inches and Smaller:
1. Stainless steel, socket weld type.
2. Comply with ASME B16.11 and ASTM A182/A182M.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Provide stainless steel rods to support distribution manifolds and mount in air system plenums.

C. Connect dry steam humidifiers to steam supply and to condensate piping. Provide gate valve, inlet strainer, and inverted bucket steam trap. Refer to Section 232213 and Section 232214.

END OF SECTION 238415

SECTION 260001
GENERAL PROVISIONS FOR ELECTRICAL WORK

PART 1 GENERAL

1.01 WORK INCLUDED

A. Work in this Section includes the providing of labor, materials, equipment and services necessary for a complete and safe installation in accordance with the contract documents and all applicable codes and authorities having jurisdiction for electrical work covered by all sections within the specifications (including but not limited to electrical systems and equipment).

As a condition of Contractor's use of these specifications, Contractor agrees to: (i) name AKF as additional insured on Contractor's insurance policies wherever permitted, including but not limited to Contractor's General Liability policy, which shall be primary and non-contributory, (ii) provide AKF, upon request, with a certificate of insurance and copies of specific endorsements to Contractor's insurance policies evidencing said additional insured status, and (iii) waive all rights of recovery against AKF by way of subrogation, assignment, or otherwise with regard to insured claims.

B. Where Divisions of Work 01 thru 14 are referenced herein and are not provided elsewhere in the project documents, refer to this section.

C. For Firestopping, refer to section 26 0300.

D. For Demonstration and Training refer to section 26 04000.

E. Provide cutting and patching

F. Related Work And Requirements
   1. Requirements of general conditions, supplementary conditions for mechanical and electrical work and Division No. 1.
   2. Requirements noted under other Divisions of Work

1.02 WORK NOT INCLUDED

A. Providing temporary light and power

B. Providing finish painting.

C. Providing access doors and filler.

D. Installing access door and providing filler.

E. Supplying and setting motors.

F. Cutting and patching, except as noted in "AIA Document A201" and "Supplementary Conditions for Mechanical and Electrical Work." See section 23 0002

G. Excavating and backfilling under building.

H. Excavating and backfilling.

I. Providing flashing.

J. Providing shaft gratings.

K. Providing equipment platforms.

1.03 DESCRIPTION OF BID DOCUMENTS

A. Specifications, in general, describe quality and character of materials and equipment.

B. Drawings, in general are diagrammatic and indicate sizes, locations, connections to equipment and methods of installation. Provide additional offsets, fittings, hangers, supports, valves, drains as required for construction and coordination with work of other trades.

C. Scaled and indicated dimensions are approximate and are for estimating purposes only. Before proceeding with work, check and verify all dimensions.

D. Make adjustments that may be necessary or requested in order to resolve space problems, preserve headroom, and avoid architectural openings, structural members and work of other trades.

E. Typical details, where shown on the drawings, apply to each and every item of the project where such items are applicable. Typical details are not repeated in full on the plans, and are diagrammatic only, but with the intention that such details shall be incorporated in full.

F. If any part of Specifications or Drawings appears unclear or contradictory, consult Architect and/or Engineer for interpretation and decision as early as possible during bidding period. Do not proceed with work without the Architect's and/or Engineer's decision.

1.04 DEFINITIONS

A. "Furnish": To supply, deliver, unload, and inspect for damage.

B. "Install": To unpack, assemble, erect, apply, place, finish, cure, protect, clean, start up, and make ready for use.

C. "Provide": To furnish and install.

D. "Supply": Same as Furnish.

E. "Work": includes labor, materials, equipment, services, and all related accessories necessary for the proper and complete installation of complete systems.

F. "Piping": includes pipe, tube, fittings, flanges, valves, controls, strainers, hangers, supports, unions, traps, drains, insulation, and all related accessories.

G. "Wiring": includes raceway, fittings, wire, boxes, and all related accessories.

H. "Concealed": not in view, installed in masonry or other construction, within furred spaces, double partitions, hung ceilings, trenches, crawl spaces, or enclosures.

I. "Exposed": in view, not installed underground or "concealed" as defined above.

J. "Indicated," "shown," or "noted": as indicated, shown or noted on drawings or specifications.

K. "Similar" or "equal": of base bid manufacturer, equal in quality, materials, weight, size, performance, design and efficiency of specified product, conforming with "Base Bid Manufacturers."

L. "Reviewed," "satisfactory," "accepted," or "directed": as reviewed, satisfactory, accepted, or directed by or to Architect and/or Engineer.

M. "Motor Controllers": includes manual or magnetic starters with or without switches, individual pushbuttons or hand-off-automatic (HOA) switches controlling the operation of motors.

N. "Control or Actuating Devices": includes automatic sensing and switching devices such as thermostats, pressure, float, flow, electro-pneumatic switches and electrodes controlling operation of equipment.

O. "Finished Spaces": Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

P. "Exposed, Interior Installations": Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

Q. "Exposed, Exterior Installations": Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

R. "Concealed, Interior Installations": Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.

S. "Concealed, Exterior Installations": Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.05 QUALITY ASSURANCE

A. All work shall combine with National Electrical Code and all applicable local codes.

B. All equipment and accessories shall be the product of manufacturers regularly engaged in their manufacture. All items of a given type shall be the products of the same manufacturer.

C. Furnish all materials, equipment and accessories new and free from defects.

D. All electrical equipment shall be listed by Underwriters' Laboratories, Inc. (UL) or bear UL labels.

E. Supply all equipment and accessories in complete compliance with and in accordance with the applicable standards listed in reference standards of this Section and with all applicable national, state and local codes.

F. Equipment ampere ratings shall be for continuous operation in 104oF (40oC) ambient temperature unless otherwise indicated.

G. Provide the following heights of outlets and verify with Architect and/or Engineer prior to installation:
   1. From finished floor to centerline of outlets for:
      a. Receptacles and telephones:
         1) Generally 1'-6"
         2) Over work benches 3'-6"
      b. Wall switches:
         1) Generally 4'-0"
      c. Wall fixtures 7'-0"
      d. Motor controllers 5'-0"
      e. Gongs and horns 7'-6"
      f. FA Gongs and horns (NYC) 8’-0”
      g. Fire alarm stations 3'-6"
      h. Clocks 7'-6"
      i. Strobe lights 6’-8” or 6 in below ceiling (whichever is lower)
   2. Provideoutlets to match existing.
   3. The following are exceptions to specified height of outlets:
      a. At junction of different wall finish materials.
      b. On molding or break in wall surface.
      c. In violation of Code.
      d. As noted or directed.

1.06 JOB CONDITIONS

A. Inspection of Site Conditions:
   1. Before starting work, visit the site and examine the conditions under which the work has to be performed. Report in writing any conditions which might adversely affect the work.

B. Connections to existing work:
   1. Install new work and connect to existing work with minimum interference to existing facilities.
   2. Provide temporary shutdown of existing services at no additional charges and only with written consent of Owner. Schedule shutdowns not to interfere with normal operation of existing facilities.
   3. Alarm and emergency systems shall not be interrupted.
   4. Maintain continuous operation of existing facilities as required with necessary temporary connections between new and existing work.
   5. Connect new work to existing work in neat and acceptable manner. Restore existing disturbed work to original condition.

C. Removal and relocation of existing work.
   1. Disconnect, remove, or relocate electrical material, equipment, and other work noted and required by alterations, modifications, or changes in existing construction.
   2. Provide new material and equipment required for relocated equipment.
   3. Disconnect load and line end of conductor feeding existing equipment.
   4. Tape both ends of abandoned conductors and cap outlets and abandoned raceways.
   5. Remove any raceway no longer required for removed or relocated equipment.

6. Cut and cap abandoned floor raceways flush with concrete floor or behind walls and ceilings.
7. Dispose of removed Electrical equipment as directed.
8. Return removed Electrical equipment to Owner as directed and dispose of other equipment.

1.07 REFERENCE STANDARDS

A. Published specifications, standards tests, or recommended methods of trade, industry or governmental organizations apply to work in all Sections as noted below:
1. NEMA - National Electrical Manufacturers' Association.
2. ANSI - American National Standards Institute.
3. IEEE - Institute of Electrical and Electronics Engineers.
4. ASTM - American Society for Testing and Materials.
5. NEC - National Electrical Code.
6. NFPA - National Fire Protection Association.
7. UL - Underwriters' Laboratories, Inc.
8. OSHA - Occupational Safety and Health Administration Regulations.

1.08 SUBMITTALS

A. Submit shop drawings product data, samples and certificates of compliance required by contract documents.

B. Operating instructions, maintenance manuals and parts lists.
1. Provide manufacturer's equipment brochures and service manuals consisting of the following:
a. Descriptive literature for equipment and components.
b. Model number and performance data.
c. Installation and operating instructions.
d. Maintenance and repair instructions.
e. Recommended spare parts lists.
2. Assemble manufacturers' equipment manuals in chronological order following the specifications' numbering system using heavy duty three ring binders.
3. Submit threedetailed and simplified one line, color coded wiring diagrams.
4. Submit field test reports.

1.09 ELECTRONIC COPIES OF AKF DRAWINGS

A. If the contractor requires (.dwg) format, after preparation the drawings will be forwarded only upon receipt of signed acceptance of terms form. Permission from the architect must first be obtained for AKF to include the architectural background as reference. The contractor is to obtain the architects latest drawings directly from the architect.

B. These files are being issued for the convenience of the contractor and the contractor remains responsible for all contract requirements related to the normal shop drawing preparation process.

1.10 SUBMISSIONS:

A. Provide all coordination drawings, ductwork and piping shop drawings in ‘AutoCad” format, version compatible with owner. All catalog cuts and submittals to be provided in electronic “PDF” format the architect will forward all submissions to the engineer.

B. If paper submissions are to be provided the following shall be adhered to.
1. Submissions 11 in. X 17 in. or smaller: If the submission is a catalog cut, then the contractor shall submit one original and one copy. Otherwise, they shall submit two copies. The architect will forward the original and one copy (two copies when no original is received) to the engineer. All catalog cuts shall be complete.
2. Submissions larger than 11 in. X 17 in.: submit two copies to the architect. The architect will forward to the engineer.

C. Indicate on each submission: project name and location, architect and engineer, item identification and approval stamp of prime contractor, subcontractor names and phone numbers, reference to the applicable design drawing or specification article, date and scale.

D. The work described in all shop drawing submission shall be carefully checked for all clearances (including those required for maintenance and servicing), field conditions, maintenance of architectural conditions and proper coordination with all trades on the job.

E. Each submitted shop drawing is to include a certification that all related job conditions have been checked and verified and that there are no conflicts.

F. All shop drawings are to be submitted to allow ample time for checking in advance of field requirements. All submittals to be complete and contain all required and detailed information. Shop drawings with multiple parts shall be submitted as a package.

G. If submittals differ from the contract document requirements, make specific mention of such difference in a letter of transmittal, with request for substitution, together with reasons for same.

1.11 AS-BUILTS AND EQUIPMENT OPERATION INSTRUCTIONS

A. Provide all coordination drawings, ductwork and piping shop drawings in AutoCad format, version compatible with owner. All catalog cuts and submittals to be provided in electronic “PDF” format the architect will forward all submissions to the engineer.

B. On completion and acceptance of work, this contractor shall furnish written instructions, equipment manuals and demonstrate to the owner the proper operation and maintenance of all equipment and apparatus furnished under this contract.

C. The contractor shall give one copy of the instructions to the owner and one copy to the engineer. .

D. Final “as-built” drawings indicating as installed conditions shall be provided to the architect and engineer after completion of the installation.

1.12 OPERATING & MAINTENANCE INSTRUCTION

A. Prepare operating and maintenance instructions manual including operating instructions, maintenance instructions, manufacturer's data, specific equipment data.

B. Provide an alphabetical list of all system components, with the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year of operation.

C. Provide operating instructions for complete system, including:
1. Normal starting, operating, and shut-down
2. Emergency procedures for fire or failure of major equipment
3. Summer and winter special procedures
4. Day and night special procedures

D. Provide maintenance instructions, including:
1. Detailed and simplified one line, color coded wiring diagrams.
2. Proper lubricants and lubricating instructions for each piece of equipment, and date when lubricated
3. Required cleaning, replacement and/or adjustment schedule

E. Provide manufacturer's data on each piece of equipment, including:
1. Installation instructions.
2. Drawings and specifications.
3. Parts list, including recommended items to be stocked.
4. Complete wiring and temperature control diagrams.
5. Marked or revised prints locating all concealed parts and all variations from the original system design.
6. Test and inspection certificates.

F. Provide specific equipment data including, but not limited to, the following:
1. For Communications Systems:

a. RACEWAY
b. WIRE AND CABLE
c. LOW VOLTAGE DISTRIBUTION EQUIPMENT
d. MOTOR CONTROL CENTERS
e. MOTOR CONTROLLERS
f. POWER, CONTROL AND ALARM WIRING SYSTEMS
g. GROUNDING SYSTEM
h. DEVICES
i. LIGHTING FIXTURES
j. DIMMING SYSTEMS
k. TELEPHONE CONDUIT SYSTEM
l. ELECTRICAL PROVISIONS FOR SECURITY AND BUILDING AUTOMATION SYSTEMS
m. ELECTRICAL PROVISIONS FOR FIRE AND LIFE SAFETY
n. CODED - FIRE ALARM SYSTEM
o. MULTIPLEXED FIRE AND LIFE SAFETY SYSTEM (FLSS)
p. TESTING

2. For Fire Alarm System
   a. Drawings and description of system controlled.
   b. Sequence of operation for each system.
   c. Data on components.
   d. Wiring and piping, schematic any layout, for panels and panelboards.
   e. System operating manual, including set points.

G. Provide instruction of operating personnel.
   1. Instruct Owner's operating personnel in proper starting sequences, operation, shutdown, and maintenance procedures, including normal and emergency procedures.
   2. Instruction to be by personnel skilled in operation of equipment. Instructions for major equipment to be by equipment manufacturers' representatives.
   3. Make arrangements to give instructions by system and not by building areas.
   4. Instructions on fire alarm systems to be by manufacturer's representative.

1.13 STAIRWAYS

A. Electrical equipment and distribution is prohibited in egress stairways unless serving the stairway.

1.14 PRODUCT, DELIVERY, HANDLING AND STORAGE

A. Ship materials and equipment in crated sections of sizes to permit passing through available space, where required

B. Deliver equipment with protective crating and shrink-wrapped covering.

C. Receive and accept materials and equipment at the site, properly handle, house, and protect them from damage and the weather until installation. Replace equipment damaged in the course of handling without additional charge.

D. Store to prevent damage and protect from weather, dirt, fumes, water, and construction debris in clean dry space

E. Arrange for and provide storage space or area at the job site for all materials and equipment to be received and/or installed in this project

F. All exposed openings of equipment and materials are to be covered

G. Handle according to manufacturer's written rigging and installation instructions for unloading, transporting, and setting in final location

H. Protect units from physical damage. Leave factory shipping covers in place until installation

1.15 ACCESSIBILITY

A. Install all work so that parts requiring periodic inspection, operation, maintenance, and repair are readily accessible. Minor deviations from the drawings may be made to accomplish this, but changes of substantial magnitude shall not be made without written approval.

B. Group concealed valves, expansion joints, controls, dampers, and equipment requiring access, so as to be freely accessible through access doors.

1.16 SPECIAL TOOLS

A. Provide one set of any special tools required to operate, adjust, dismantle or repair equipment furnished under this Division for the Owner's use at the completion of the work.

B. Provide one suitable tool case for special tools.

1.17 CUTTING AND PATCHING

A. Provide all carpentry, cutting and patching required for proper installation of materials and equipment specified. Do not cut or drill structural members without review by Architect and Structural Engineer.

1.18 UTILITY CONNECTIONS

A. Arrange for and pay costs for all specified utilities including the following:
   1. Connection to utility company mains.
   2. Payment of service charges.
   3. Provision for temporary utilities.
   4. Connect in accordance with authority having jurisdiction.

1.19 PROTECTION OF MATERIALS

A. Protect from damage, water, dust, etc., materials, equipment and apparatus provided under this trade, both in storage and installed

1.20 SUBSTITUTIONS

A. No substitute material or manufacturer of equipment shall be permitted without a formal written submittal to the engineer which includes all dimensional, performance and material specifications and is approved in writing by the engineer. Any changes in layout or design brought about by the use of a substitution shall be submitted to the engineer fully designed for review in conjunction with the submittal of the alternate. Any substitution must be submitted with an explanation why a substitution is being utilized. If the substitute is being utilized for financial reasons, the associated credit must be simultaneously submitted. Final acceptance or rejection of any substitution is subject to the owner's review.

B. Contractor to be responsible for the additional cost relating to the substitution, including but not limited to space requirements, structural support, utilities including electrical power, gas, water, etc.

1.21 STANDARDS:

A. If any item in the specification, as furnished by the contractor, is manufactured in a location which does not certify UI/ASME/ANSI standards, the contractor is to pay the Owner for ALL expenses incurred by the Owner for an outside testing company to confirm such compliance.

1.22 COORDINATION

A. Arrange for distribution spaces, space for equipment, chases, slots, and openings in building structure during progress of construction, to allow for electrical installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for electrical items requiring access that are concealed behind finished surfaces.

D. Do not install conduits, wiring, equipment or other materials in locations that block access to items and equipment requiring access or removal including items of other trades.

E. Provide coordination drawing for all areas of the work. The drawings shall have the following qualities:

1. Minimum 3/8” scale
2. Clearly show all the work for each trade including, but not limited to hangers, valves, dampers, actuators, access doors and service access requirements for all items.
3. Indicate bottom elevations of all ductwork, electrical conduit, raceways, cable trays, control wiring and piping.
4. Ductwork, piping, and conduit 3 inches and smaller may be shown in single line.
5. Ductwork, piping, and conduit greater than 3 inches shall be shown in double line.
6. Color scheme:
    a. Architectural and structural background: Light grey.
    b. Ductwork: Black.
    c. Equipment and pads: Purple.
    d. HVAC piping and equipment: Green.
    e. Electrical conduits and equipment: Blue.
    f. Plumbing: Orange.
    g. Fire protection: Red.
    h. Control wiring: Pink.

1.23 GUARANTEE

A. The Contractor shall furnish a written guarantee to replace or repair promptly and assume responsibility for all expenses incurred for any workmanship and equipment in which defects develop within one year form the date of final certificate for payment and/or from date or actual use of equipment or occupancy of spaces by Owner included under the various parts of work, whichever date is earlier. This work shall be done as directed by the Owner. This guarantee shall also provide that where defects occur, the Contractor will assume responsibility for all expenses incurred in repairing and replacing work of other trades affected by defects, repairs or replacements in equipment supplied by the Contractor.

1.24 PERMITS AND FEES

A. The Contractor shall give necessary notice, file drawings and specifications with the department having jurisdiction, obtain permits or licenses necessary to carry out this work and pay all fees therefore. The Contractor shall arrange for inspection and test of any or all parts of the work if so required by authorities and pay all charges for same. The Contractor shall pay all costs for, furnish to the Owner before final billing, all certificates necessary as evidence that the work installed conforms with all regulations where they apply to this work.

B. This contractor shall prepare or hire the necessary consultants to prepare and file all plans, calculation, forms, etc.. required for filing with all agencies required for this work including but not limited to FDNY, etc..

C. The electrical contractor shall prepare the as-built drawings to comply with the FDNY requirements and send electronic copy to AKF for use in preparing the as-built FDNY drawing as the engineer of record. The electrical contractor shall sign and seal the AKF drawing, for the functional statement part of the as-built requirements. AKF will sign and seal for the engineer of record.

1.25 SPECIAL INSPECTION

A. Special inspection shall be provided by the owner. This contractor shall provide all required services to accomplish these inspections.

1.26 SERVICE AND WARRANTY (MAINTENANCE CONTRACT)

A. This contract shall provide a full year service and warranty of all electrical components and systems, with add alternate prices for years 2, 3 and 4 following this first year. At the time of acceptance of project, the tenant or owner’s representative will decide to accept which alternate, if any.

1.27 RIGGING

A. This contractor shall provide all required rigging, hoisting and bracing to install the equipment as indicated on the plans. This work shall be performed by an insured certified licensed rigging company that is experienced in rigging equipment of the type indicated for the

areas shown on the construction documents. This contractor shall submit rigging plans for approval prior to proceeding with the work.

B. All permits required from the authorities and agencies involved to perform the rigging are the responsibilities of this contractor.

C. All structural supports, modifications or additions are to be submitted to the structural engineer for approval prior to proceeding with the work. All supplemental structural supports, elevator charges /modifications, bracing and protection required for the rig is the responsibility of this contractor

D. The rigging contractor shall hire and pay for all charges and services of the building elevator contractor for the rigging of the equipment

1.28 FIELD QUALITY CONTROL

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.

D. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Have work performed by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, and disfigurement.

H. See individual specification sections for testing and inspection required.

I. Replace Work or portions of the Work not complying with specified requirements.

J. Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, state and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

PART 2 PRODUCTS

2.01 BASE BID MANUFACTURERS

A. Base bid on materials or equipment are specified by name of manufacturer, brand or trade name and catalog reference.

B. The choice will be optional with bidder where two or more manufacturers are named.

C. The following are base bid manufacturers for items under this Section:
1. Access doors: Karp Associates, Inc., Higgins Mfg. Co., Milcor Steel Co., and Walsh-Spencer Co.
2. Paint: Sherwin-Williams, Pittsburgh Plate Glass Co., Pratt and Lambert, and Rust-Oleum.
3. Gratings: Irving Grating IKG Industries and Ryerson - Inland Steel Co.

2.02 ACCESS TILE IDENTIFICATION:

A. In removable ceiling tiles, provide buttons, tabs, and markers to identify location of concealed work. Submit for review.

2.03 NAMEPLATES

A. Provide nameplates with inscriptions, subject to review, indicating equipment and voltage. Fasten with epoxy cement or chrome plated screws. Nameplate shall be black Lamicoid sheet with white lettering.

B. Provide nameplates for the following:
1. Disconnect switches.

2. Individual circuit breakers.
3. Panels.
4. Cabinets
5. Switchboards.
6. Motor Controllers.
7. Motor Control Centers.

PART 3 - EXECUTION

3.01 CUTTING THROUGH CELLULAR FLOORING

A. Cut openings for reception of work in accordance with manufacturer's recommendations and approval and in a manner not to interrupt continuity of electrical raceways.

3.02 ELECTRICAL IDENTIFICATION

A. Refer to identification Section 26 0553.

3.03 FIELD QUALITY CONTROL

A. Perform tests as noted, and in the presence of Architect and/or Engineer and authorities having jurisdiction.

B. Provide required labor, material, equipment, and connections necessary for tests and submit results for review.

C. Repair or replace defective work and pay for restoring or replacing damaged work due to tests, as directed.

3.04 START-UP

A. Properly lubricate all pieces of equipment.

B. Check and clean all pipes and ducts of dirt and debris.

C. Prepare each piece of equipment in accordance with manufacturer's installation instructions and have a copy at the equipment.

D. Check rotation on each motor.

E. Have representatives of each manufacturer present when hereinafter specified, so that equipment will be started up by manufacturer.

3.05 CLEANING

A. Brush and clean work prior to concealing, painting and acceptance. Perform in stages if directed.

B. Clean and repair painted exposed work, soiled or damaged, to match adjoining work before final acceptance.

C. Remove debris from inside and outside of material and equipment.

3.06 PROJECT CLOSEOUT PROCEDURES

A. It shall be each contractor's responsibility to personally hand-deliver all of the required project closeout checklist items and to obtain Owner's authorized representative(s) signed receipt on all items requiring Owner sign-off.

B. Review requirements of each section of the specifications and submit for approval to Architect the sign-off forms which shall become the project closeout checklist. These, at a minimum, shall include the following information shown in attached Project Closeout Checklist Example. The Architect and/or Owner may incorporate additional specific items to the following checklist which shall become part of the project requirements.

C. Closeout Checklist Example:

	DATES		
ITEM	**COMPLETED**	**RECEIVED BY OWNER**	**OWNER'S SIGNOFF**
PERMITS			

CITY AND COUNTY INSPECTION			
MANUFACTURER'S WARRANTIES			
CONTRACTOR'S WARRANTIES			
STATE FIRE RATING DATA			
COPY OF FINAL SHOP DRAWINGS			
LIST AND POSSESSION OF SPARE PARTS			
PRESSURE TESTS			
EQUIPMENT TESTS REQUIRED BY SPECS			
O & M MANUALS			
RECORD DOCUMENTS			
COORDINATION DRAWINGS			
FIELD TEST REPORTS			
COMMISSIONING REPORTS/LETTERS/FORMS			
ON-SITE TRAINING COMPLETE			
PROTECTIVE DEVICE SETTINGS			
TAGS AND CHARTS			
FINAL FA INSTALLATION DRAWINGS			
INSURANCE UNDERWRITERS APPROVALS			
FINAL PUNCH LIST (INITIALED BY CONTRACTOR THAT ITEMS ARE COMPLETE)			
BUILDING CERTIFICATE OF OCCUPANCY (C.O.)			
24-HOUR PHONE NO. FOR SERVICE DURING GUARANTEE PERIOD			

END OF SECTION 260001

SECTION 260300
FIRESTOPPING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Firestopping systems.

1.02 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems 2023a.

B. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestop Systems 2020a.

C. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers 2020a.

D. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi 2015, with Editorial Revision (2021).

E. ITS (DIR) - Directory of Listed Products Current Edition.

F. FM 4991 - Approval Standard of Firestop Contractors 2013.

G. FM (AG) - FM Approval Guide Current Edition.

H. SCAQMD 1168 - Adhesive and Sealant Applications 1989, with Amendment (2022).

I. UL (DIR) - Online Certifications Directory Current Edition.

J. UL (FRD) - Fire Resistance Directory Current Edition.

1.03 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.

C. Product Data: Provide data on product characteristics, performance ratings, and limitations.

D. Sustainable Design Submittal: Submit VOC content documentation for all non-preformed materials.

E. Manufacturer's Installation Instructions: Indicate preparation and installation instructions.

F. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

G. Installer Qualification: Submit qualification statements for installing mechanics.

1.04 QUALITY ASSURANCE

A. Fire Testing: Provide firestopping assemblies of designs that provide the scheduled fire ratings when tested in accordance with methods indicated.
   1. Listing in UL (FRD), FM (AG), or ITS (DIR) will be considered as constituting an acceptable test report.
   2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

C. Installer Qualifications: Company specializing in performing the work of this section and:
   1. Trained by manufacturer.
   2. Approved by Factory Mutual Research Corporation under FM 4991, or meeting any two of the following requirements:
   3. Verification of minimum three years documented experience installing work of this type.
   4. Verification of at least five satisfactorily completed projects of comparable size and type.
   5. Licensed by local authorities having jurisdiction (AHJ).

1.05 FIELD CONDITIONS

A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for three days after installation of materials.

B. Provide ventilation in areas where solvent-cured materials are being installed.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Firestopping Manufacturers:
   1. 3M Fire Protection Products; _____: www.3m.com/firestop.
   2. Hilti, Inc; _____: www.us.hilti.com.
   3. Specified Technologies Inc; _____: www.stifirestop.com.

2.02 MATERIALS

A. Firestopping Materials: Any materials meeting requirements.

B. Volatile Organic Compound (VOC) Content: Provide products having VOC content lower than that required by SCAQMD 1168.

C. Mold and Mildew Resistance: Provide firestoppping materials with mold and mildew resistance rating of zero(0) in accordance with ASTM G21.

D. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Provide type of materials as required for tested firestopping assembly.

2.03 FIRESTOPPING ASSEMBLY REQUIREMENTS

A. Through Penetration Firestopping: Use system that has been tested according to ASTM E814 to have fire resistance F Rating equal to required fire rating of penetrated assembly.
   1. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
   2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
   3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
   4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.

2.04 FIRESTOPPING PENETRATIONS THROUGH CONCRETE AND CONCRETE MASONRY CONSTRUCTION

A. Penetrations Through Floors or Walls By:
   1. Multiple Penetrations in Large Openings:
      a. 3 Hour Construction: UL System C-AJ-8093; Specified Technologies Inc. SSB Intumescent Firestop pillows.
      b. 3 Hour Construction: UL System C-AJ-8099; Hilti FS-ONE MAX Intumescent Firestop Sealant.
      c. 3 Hour Construction: UL System C-AJ-8110; Hilti CFS-BL Firestop Block.
      d. 2 Hour Construction: UL System C-AJ-8143; Hilti FS-ONE MAX Intumescent Firestop Sealant.
      e. 2 Hour Construction: UL System C-AJ-8035; Specified Technologies Inc. SSM mortar.
      f. 2 Hour Construction: UL System C-AJ-8055; Specified Technologies Inc. SSP Firestop Putty.
      g. 2 Hour Construction: UL System C-AJ-8093; Specified Technologies Inc. SSB Intumescent Firestop pillows.
   2. Uninsulated Metallic Pipe, Conduit, and Tubing:
      a. 3 Hour Construction: UL System C-AJ-1079; Specified Technologies Inc. SSS Intumescent Firestop Sealant.
      b. 3 Hour Construction: UL System C-AJ-1184; Hilti FS-ONE MAX Intumescent Firestop Sealant.
      c. 3 Hour Construction: UL System C-AJ-1198; Specified Technologies Inc. SIL silicone sealant.

d. 3 Hour Construction: UL System C-AJ-1215; Specified Technologies Inc. LC Endothermic Firestop Sealant.
e. 3 Hour Construction: UL System C-AJ-1217; Specified Technologies Inc. SSS Intumescent Firestop Sealant.
f. 3 Hour Construction: UL System C-AJ-1226; Hilti FS-ONE MAX Intumescent Firestop Sealant.
g. 3 Hour Construction: UL System C-AJ-1353; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
h. 3 Hour Construction: UL System C-AJ-1421; Hilti FS-ONE MAX Intumescent Firestop Sealant or CP 604 Self-Leveling Firestop Sealant.
i. 3 Hour Construction: UL System C-AJ-1425; Hilti CFS-S SIL GG Firestop Silicone Sealant Gun-Grade.
j. 2 Hour Construction: UL System C-AJ-1090; Specified Technologies Inc. SSP Firestop Putty.
k. 2 Hour Construction: UL System C-AJ-1198; Specified Technologies Inc. SIL silicone sealant.
l. 2 Hour Construction: UL System C-AJ-1226; Hilti FS-ONE MAX Intumescent Firestop Sealant.
m. 2 Hour Construction: UL System C-AJ-1240; Specified Technologies Inc. LC Endothermic Firestop Sealant.

3. Uninsulated Non-Metallic Pipe, Conduit, and Tubing:
   a. 3 Hour Construction: UL System C-AJ-2109; Hilti CP 643N/644 Firestop Collar.
   b. 3 Hour Construction: UL System C-AJ-2220; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   c. 3 Hour Construction: UL System C-AJ-2297; Specified Technologies Inc. SSC collars.
   d. 2 Hour Construction: UL System C-AJ-2167; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   e. 2 Hour Construction: UL System C-AJ-2109; Hilti CP 643N/644 Firestop Collar.
   f. 2 Hour Construction: UL System C-AJ-2297; Specified Technologies Inc. SSC collars.
   g. 2 Hour Construction: UL System C-AJ-2298; Specified Technologies Inc. LCC Intumescent Firestop Collars.
   h. 2 Hour Construction: UL System C-BJ-2021; Hilti CP 643N Firestop Collar.
4. Electrical Cables Not In Conduit:
   a. 3 Hour Construction: UL System C-AJ-3085; Specified Technologies Inc. LC Endothermic Firestop Sealant.
   b. 3 Hour Construction: UL System C-AJ-3095; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   c. 3 Hour Construction: UL System C-AJ-3154; Specified Technologies Inc. SSS Intumescent Firestop Sealant.
   d. 3 Hour Construction: UL System C-AJ-3231; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
   e. 3 Hour Construction: UL System C-AJ-3312; Specified Technologies Inc. FP Intumescent Firestop Plug.
   f. 2 Hour Construction: UL System C-AJ-3216; Hilti CFS-PL Firestop Plug.
   g. 2 Hour Construction: UL System C-AJ-3283; Hilti CP653 Speed Sleeve.
   h. 2 Hour Construction: UL System W-J-3198; Hilti CFS-SL RK Retrofit Sleeve Kit for existing cables.
   i. 2 Hour Construction: UL System W-J-3199; Hilti CFS-SL SK Firestop Sleeve Kit.
5. Cable Trays with Electrical Cables:
   a. 3 Hour Construction: UL System C-AJ-4029; Specified Technologies Inc. SSB Intumescent Firestop pillows.
   b. 3 Hour Construction: UL System C-AJ-4093; Hilti CFS-BL Firestop Block.
   c. 2 Hour Construction: UL System C-AJ-4094; Hilti CFS-BL Firestop Block.

6. Electrical Busways:
   a. 3 Hour Construction: UL System C-AJ-6017; Hilti FS-ONE MAX Intumescent Firestop Sealant.
7. HVAC Ducts, Uninsulated:
   a. 3 Hour Construction: UL System C-AJ-7051; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   b. 2 Hour Construction: UL System C-AJ-7111; Hilti FS-ONE MAX Intumescent Firestop Sealant.

B. Penetrations Through Floors By:
1. Multiple Penetrations in Large Openings:
   a. 3 Hour Construction: UL System F-A-1023; Hilti CP 680-P/M Cast-In Device.
   b. 2 Hour Construction: UL System F-A-8012; Hilti CFS-S SIL GG Firestop Silicone Sealant Gun-Grade or CFS-S SIL SL Firestop Silicone Sealant Self-Leveling.
2. Uninsulated Metallic Pipe, Conduit, and Tubing:
   a. 3 Hour Construction: UL System F-A-1017; Hilti CP 680-P/M Cast-In Device.
   b. 3 Hour Construction: UL System F-A-1110; Specified Technologies Inc. CID cast-in devices.
   c. 2 Hour Construction: UL System F-A-1016; Hilti CP 680-P/M Cast-In Device.
   d. 2 Hour Construction: UL System F-A-1110; Specified Technologies Inc. CID cast-in devices.
3. Uninsulated Non-Metallic Pipe, Conduit, and Tubing:
   a. 3 Hour Construction: UL System F-A-2054; Hilti CP 680-P Cast-In Device.
   b. 3 Hour Construction: UL System F-A-2066; Hilti CP 680-P Cast-In Device.
   c. 3 Hour Construction: UL System F-A-2213; Hilti CFS-DID Drop-In Device.
   d. 3 Hour Construction: UL System F-A-2192; Specified Technologies Inc. CID cast-in devices.
   e. 3 Hour Construction: UL System F-A-2246; Specified Technologies Inc. CID cast-in devices.
   f. 2 Hour Construction: UL System F-A-2065; Hilti CP 680-P Cast-In Device.
   g. 2 Hour Construction: UL System F-A-2213; Hilti CFS-DID Drop-In Device.
   h. 2 Hour Construction: UL System F-A-2053; Hilti CP 680-P Cast-In Device.
4. Electrical Cables Not In Conduit:
   a. 3 Hour Construction: UL System F-A-3021; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
   b. 3 Hour Construction: UL System F-A-3029; Specified Technologies Inc. Ready-Sleeve.
   c. 3 Hour Construction: UL System F-A-3037; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
   d. 3 Hour Construction: UL System F-A-3054; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
   e. 3 Hour Construction: UL System F-A-3033; Hilti CP 680-P/M Cast-In Device.
   f. 2 Hour Construction: UL System F-A-3033; Hilti CP 680-P/M Cast-In Device.
   g. 2 Hour Construction: UL System F-A-3032; Specified Technologies Inc. Ready Split Sleeve.
   h. 2 Hour Construction: UL System F-A-3058; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.

C. Penetrations Through Walls By:
1. Uninsulated Metallic Pipe, Conduit, and Tubing:
   a. 2 Hour Construction: UL System W-J-1067; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   b. 1 Hour Construction: UL System W-J-1067; Hilti FS-ONE MAX Intumescent Firestop Sealant.
2. Electrical Cables Not In Conduit:

a. 4 Hour Construction: UL System W-J-3142; Specified Technologies Inc. Ready-Sleeve.
b. 4 Hour Construction: UL System W-J-3157; Specified Technologies Inc. Ready Split Sleeve.
c. 4 Hour Construction: UL System W-J-3195; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
d. 2 Hour Construction: UL System C-AJ-3095; Hilti FS-ONE MAX Intumescent Firestop Sealant.
e. 2 Hour Construction: UL System C-AJ-3216; Hilti CFS-PL Firestop Plug.
f. 2 Hour Construction: UL System W-J-3098; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
g. 2 Hour Construction: UL System W-J-3130; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
h. 2 Hour Construction: UL System W-J-3138; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
i. 2 Hour Construction: UL System W-J-3141; Specified Technologies Inc. Ready-Sleeve.
j. 2 Hour Construction: UL System W-J-3156; Specified Technologies Inc. Ready Split Sleeve.
k. 2 Hour Construction: UL System W-J-3158; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
l. 2 Hour Construction: UL System W-J-3180; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
m. 2 Hour Construction: UL System W-J-3182; Specified Technologies Inc. Ready Split Sleeve.
n. 2 Hour Construction: UL System W-J-3182; Specified Technologies Inc. Ready-Sleeve.

2.05 FIRESTOPPING PENETRATIONS THROUGH GYPSUM BOARD WALLS

A. Penetrations By:
1. Multiple Penetrations in Large Openings:
a. 2 Hour Construction: UL System W-L-8013; Hilti CFS-BL Firestop Block.
b. 2 Hour Construction: UL System W-L-8025; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
c. 2 Hour Construction: UL System W-L-8050; Specified Technologies Inc. SSB Intumescent Firestop pillows.
d. 2 Hour Construction: UL System W-L-8071; Hilti FS-ONE MAX Intumescent Firestop Sealant.
e. 2 Hour Construction: UL System W-L-8079; Hilti FS-ONE MAX Intumescent Firestop Sealant.
f. 1 Hour Construction: UL System W-L-1408; Hilti FS-ONE MAX Intumescent Firestop Sealant.
g. 1 Hour Construction: UL System W-L-8013; Hilti CFS-BL Firestop Block.
h. 1 Hour Construction: UL System W-L-8025; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
i. 1 Hour Construction: UL System W-L-8050; Specified Technologies Inc. SSB Intumescent Firestop pillows.
j. 1 Hour Construction: UL System W-L-8071; Hilti FS-ONE MAX Intumescent Firestop Sealant.
k. 1 Hour Construction: UL System W-L-8079; Hilti FS-ONE MAX Intumescent Firestop Sealant.
2. Uninsulated Metallic Pipe, Conduit, and Tubing:
a. 2 Hour Construction: UL System W-L-1033; Specified Technologies Inc. SIL silicone sealant.
b. 2 Hour Construction: UL System W-L-1049; Specified Technologies Inc. SSS Intumescent Firestop Sealant.

c. 2 Hour Construction: UL System W-L-1090; Specified Technologies Inc. LC Endothermic Firestop Sealant.
d. 2 Hour Construction: UL System W-L-1054; Hilti FS-ONE MAX Intumescent Firestop Sealant.
e. 2 Hour Construction: UL System W-L-1164; Hilti FS-ONE MAX Intumescent Firestop Sealant.
f. 2 Hour Construction: UL System W-L-1222; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
g. 1 Hour Construction: UL System W-L-1049; Specified Technologies Inc. SSS Intumescent Firestop Sealant.
h. 1 Hour Construction: UL System W-L-1054; Hilti FS-ONE MAX Intumescent Firestop Sealant.
i. 1 Hour Construction: UL System W-L-1090; Specified Technologies Inc. LC Endothermic Firestop Sealant.
j. 1 Hour Construction: UL System W-L-1164; Hilti FS-ONE MAX Intumescent Firestop Sealant.
k. 1 Hour Construction: UL System W-L-1222; Specified Technologies Inc. LCI Intumescent Firestop Sealant.

3. Uninsulated Non-Metallic Pipe, Conduit, and Tubing:
   a. 2 Hour Construction: UL System W-L-2074; Specified Technologies Inc. SSC collars.
   b. 2 Hour Construction: UL System W-L-2078; Hilti CP 643N/644 Firestop Collar.
   c. 2 Hour Construction: UL System W-L-2128; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   d. 2 Hour Construction: UL System W-L-2237; Specified Technologies Inc. LCC Intumescent Firestop Collars.
   e. 2 Hour Construction: UL System W-L-2493; Specified Technologies Inc. RTC range-taking collar.
   f. 1 Hour Construction: UL System W-L-2074; Specified Technologies Inc. SSC collars.
   g. 1 Hour Construction: UL System W-L-2078; Hilti CP 643N/644 Firestop Collar.
   h. 1 Hour Construction: UL System W-L-2128; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   i. 1 Hour Construction: UL System W-L-2237; Specified Technologies Inc. LCC Intumescent Firestop Collars.
   j. 1 Hour Construction: UL System W-L-2241; Specified Technologies Inc. WF300 Intumescent Firestop Caulk (for wood frame construction).
   k. 1 Hour Construction: UL System W-L-2493; Specified Technologies Inc. RTC range-taking collar.
4. Electrical Cables Not In Conduit:
   a. 4 Hour Construction: UL System W-L-3276; Specified Technologies Inc. Ready-Sleeve.
   b. 4 Hour Construction: UL System W-L-3304; Specified Technologies Inc. Ready Split Sleeve.
   c. 4 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
   d. 3 Hour Construction: UL System W-L-3276; Specified Technologies Inc. Ready-Sleeve.
   e. 3 Hour Construction: UL System W-L-3304; Specified Technologies Inc. Ready Split Sleeve.
   f. 3 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
   g. 2 Hour Construction: UL System W-L-3065; Hilti FS-ONE MAX Intumescent Firestop Sealant, CP 606 Flexible Firestop Sealant, CD 601S Elastomeric Firestop Sealant, or CP 618 Firestop Putty Stick.
   h. 2 Hour Construction: UL System W-L-3076; Specified Technologies Inc. SSS Intumescent Firestop Sealant.

i. 2 Hour Construction: UL System W-L-3084; Specified Technologies Inc. SSB Intumescent Firestop pillows.
j. 2 Hour Construction: UL System W-L-3169; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
k. 2 Hour Construction: UL System W-L-3218; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
l. 2 Hour Construction: UL System W-L-3255; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
m. 2 Hour Construction: UL System W-L-3256; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
n. 2 Hour Construction: UL System W-L-3265; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
o. 2 Hour Construction: UL System W-L-3303; Specified Technologies Inc. Ready Split Sleeve.
p. 2 Hour Construction: UL System W-L-3306; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
q. 2 Hour Construction: UL System W-L-3334; Hilti CP 653 Speed Sleeve.
r. 2 Hour Construction: UL System W-L-3350; Specified Technologies Inc. LC Endothermic Firestop Sealant.
s. 2 Hour Construction: UL System W-L-3357; Specified Technologies Inc. FP Intumescent Firestop Plug.
t. 2 Hour Construction: UL System W-L-3358; Specified Technologies Inc. Ready Split Sleeve.
u. 2 Hour Construction: UL System W-L-3358; Specified Technologies Inc. Ready-Sleeve.
v. 2 Hour Construction: UL System W-L-3374; Specified Technologies Inc. FP Intumescent Firestop Plug.
w. 2 Hour Construction: UL System W-L-3376; Specified Technologies Inc. Ready-Sleeve.
x. 2 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
y. 2 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
z. 2 Hour Construction: UL System W-L-3390; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
aa. 2 Hour Construction: UL System W-L-3393; Hilti CFS-SL RK Retrofit Sleeve Kit for existing cables.
bb. 2 Hour Construction: UL System W-L-3395; Hilti CP653 Speed Sleeve.
cc. 1 Hour Construction: UL System W-L-3065; Hilti FS-ONE MAX Intumescent Firestop Sealant, CP 606 Flexible Firestop Sealant, CD 601S Elastomeric Firestop Sealant, or CP 618 Firestop Putty Stick.
dd. 1 Hour Construction: UL System W-L-3076; Specified Technologies Inc. SSS Intumescent Firestop Sealant.
ee. 1 Hour Construction: UL System W-L-3084; Specified Technologies Inc. SSB Intumescent Firestop pillows.
ff. 1 Hour Construction: UL System W-L-3169; Specified Technologies Inc. LCI Intumescent Firestop Sealant.
gg. 1 Hour Construction: UL System W-L-3218; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
hh. 1 Hour Construction: UL System W-L-3255; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
ii. 1 Hour Construction: UL System W-L-3256; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
jj. 1 Hour Construction: UL System W-L-3265; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.

kk. 1 Hour Construction: UL System W-L-3303; Specified Technologies Inc. Ready Split Sleeve.
ll. 1 Hour Construction: UL System W-L-3306; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
mm. 1 Hour Construction: UL System W-L-3334; Hilti CP 653 Speed Sleeve.
nn. 1 Hour Construction: UL System W-L-3350; Specified Technologies Inc. LC Endothermic Firestop Sealant.
oo. 1 Hour Construction: UL System W-L-3357; Specified Technologies Inc. FP Intumescent Firestop Plug.
pp. 1 Hour Construction: UL System W-L-3358; Specified Technologies Inc. Ready Split Sleeve.
qq. 1 Hour Construction: UL System W-L-3358; Specified Technologies Inc. Ready-Sleeve.
rr. 1 Hour Construction: UL System W-L-3374; Specified Technologies Inc. FP Intumescent Firestop Plug.
ss. 1 Hour Construction: UL System W-L-3376; Specified Technologies Inc. Ready-Sleeve.
tt. 1 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 22 Fire-Rated Pathway.
uu. 1 Hour Construction: UL System W-L-3377; Specified Technologies Inc. EZ-Path Series 33 Fire-Rated Pathway.
vv. 1 Hour Construction: UL System W-L-3390; Specified Technologies Inc. EZ-Path Series 44 Fire-Rated Pathway.
ww. 1 Hour Construction: UL System W-L-3393; Hilti CFS-SL RK Retrofit Sleeve Kit for existing cables.

5. Cable Trays with Electrical Cables:
   a. 2 Hour Construction: UL System W-L-4008; Specified Technologies Inc. SSB Intumescent Firestop pillows.
   b. 2 Hour Construction: UL System W-L-4011; Hilti CFS-BL Firestop Block.
   c. 2 Hour Construction: UL System W-L-4060; Hilti FS-ONE MAX Intumescent Firestop Sealant.
   d. 1 Hour Construction: UL System W-L-4008; Specified Technologies Inc. SSB Intumescent Firestop pillows.
   e. 1 Hour Construction: UL System W-L-4011; Hilti CFS-BL Firestop Block.
   f. 1 Hour Construction: UL System W-L-4060; Hilti FS-ONE MAX Intumescent Firestop Sealant.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify openings are ready to receive the work of this section.

3.02 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other materials that could adversely affect bond of firestopping material.

B. Remove incompatible materials that could adversely affect bond.

C. Install backing materials to prevent liquid material from leakage.

3.03 INSTALLATION

A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.

B. Do not cover installed firestopping until inspected by Owner's Independent Testing Agency.

C. Do not cover installed firestopping until inspected by authorities having jurisdiction.

D. Install labeling required by code.

3.04 FIELD QUALITY CONTROL

A. Independent Testing Agency: Inspection agency employed and paid by Owner, will examine penetration firestopping in accordance with ASTM E2174, and ASTM E2393.

B. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.

3.05 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.06 PROTECTION

A. Protect adjacent surfaces from damage by material installation.

END OF SECTION 260300

SECTION 260400
DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.01 SUMMARY

A. Demonstration of products and systems to be commissioned and where indicated in specific specification sections.

B. Training of Owner personnel in operation and maintenance is required for:
   1. All software-operated systems.
   2. Electrical systems and equipment.
   3. Items specified in individual product Sections.

1.02 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures; except:
   1. Make all submittals specified in this section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority.
   2. Submit one copy to the Commissioning Authority, not to be returned.
   3. Make commissioning submittals on time schedule specified by Commissioning Authority.
   4. Submittals indicated as "Draft" are intended for the use of the Commissioning Authority in preparation of overall Training Plan; submit in editable electronic format, Microsoft Word 2003 preferred.

B. Draft Training Plans: Owner will designate personnel to be trained; tailor training to needs and skill-level of attendees.
   1. Submit to Architect for transmittal to Owner.
   2. Submit to Commissioning Authority for review and inclusion in overall training plan.
   3. Submit not less than four weeks prior to start of training.
   4. Revise and resubmit until acceptable.
   5. Provide an overall schedule showing all training sessions.
   6. Include at least the following for each training session:
      a. Identification, date, time, and duration.
      b. Description of products and/or systems to be covered.
      c. Name of firm and person conducting training; include qualifications.
      d. Intended audience, such as job description.
      e. Objectives of training and suggested methods of ensuring adequate training.
      f. Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.
      g. Media to be used, such a slides, hand-outs, etc.
      h. Training equipment required, such as projector, projection screen, etc., to be provided by Contractor.

C. Training Manuals: Provide training manual for each attendee; allow for minimum of two attendees per training session.
   1. Include applicable portion of O&M manuals.
   2. Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.
   3. Provide one extra copy of each training manual to be included with operation and maintenance data.

D. Training Reports:
   1. Identification of each training session, date, time, and duration.
   2. Sign-in sheet showing names and job titles of attendees.
   3. List of attendee questions and written answers given, including copies of and references to supporting documentation required for clarification; include answers to questions that could not be answered in original training session.
   4. Include Commissioning Authority's formal acceptance of training session.

E. Video Recordings: Submit digital video recording of each demonstration and training session for Owner's subsequent use.
   1. Format: DVD Disc.
   2. Label each disc and container with session identification and date.

1.03 QUALITY ASSURANCE

A. Instructor Qualifications: Familiar with design, operation, maintenance and troubleshooting of the relevant products and systems.
   1. Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.
   2. Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.01 DEMONSTRATION - GENERAL

A. Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this section, unless approved in advance by Owner.

B. Demonstrations conducted during Functional Testing need not be repeated unless Owner personnel training is specified.

C. Demonstration may be combined with Owner personnel training if applicable.

D. Operating Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.
   2. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.

E. Non-Operating Products: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.

3.02 TRAINING - GENERAL

A. Commissioning Authority will prepare the Training Plan based on draft plans submitted.

B. Conduct training on-site unless otherwise indicated.

C. Owner will provide classroom and seating at no cost to Contractor.

D. Do not start training until Functional Testing is complete, unless otherwise specified or approved by the Commissioning Authority.

E. Provide training in minimum two hour segments.

F. The Commissioning Authority is responsible for determining that the training was satisfactorily completed and will provide approval forms.

G. Training schedule will be subject to availability of Owner's personnel to be trained; re-schedule training sessions as required by Owner; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.

H. Review of Facility Policy on Operation and Maintenance Data: During training discuss:
   1. The location of the O&M manuals and procedures for use and preservation; backup copies.
   2. Typical contents and organization of all manuals, including explanatory information, system narratives, and product specific information.
   3. Typical uses of the O&M manuals.

I. Product- and System-Specific Training:

1. Review the applicable O&M manuals.
2. For systems, provide an overview of system operation, design parameters and constraints, and operational strategies.
3. Review instructions for proper operation in all modes, including start-up, shut-down, seasonal changeover and emergency procedures, and for maintenance, including preventative maintenance.
4. Provide hands-on training on all operational modes possible and preventive maintenance.
5. Emphasize safe and proper operating requirements; discuss relevant health and safety issues and emergency procedures.
6. Discuss common troubleshooting problems and solutions.
7. Discuss any peculiarities of equipment installation or operation.
8. Discuss warranties and guarantees, including procedures necessary to avoid voiding coverage.
9. Review recommended tools and spare parts inventory suggestions of manufacturers.
10. Review spare parts and tools required to be furnished by Contractor.
11. Review spare parts suppliers and sources and procurement procedures.

J. Be prepared to answer questions raised by training attendees; if unable to answer during training session, provide written response within three days.

END OF SECTION 260400

SECTION 260519
LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Building wires, cable, connectors, splices, terminations, etc., rated 600V or less. These items are as follows:
   1. Single conductor building wire.
   2. Metal-clad cable.
   3. Wiring connectors.
   4. Electrical tape.
   5. Heat shrink tubing.
   6. Wire pulling lubricant.
   7. Cable ties.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 260526 - Grounding and Bonding for Electrical Systems: Additional requirements for grounding conductors and grounding connectors.

C. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

1.03 REFERENCE STANDARDS

A. ASTM B3 - Standard Specification for Soft or Annealed Copper Wire 2013 (Reapproved 2018).

B. ASTM B8 - Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft 2011 (Reapproved 2017).

C. ASTM B33 - Standard Specification for Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes 2010, with Editorial Revision (2020).

D. ASTM B787/B787M - Standard Specification for 19 Wire Combination Unilay-Stranded Copper Conductors for Subsequent Insulation 2004 (Reapproved 2020).

E. ASTM D3005 - Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape 2017.

F. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

G. NECA 120 - Standard for Installing Armored Cable (AC) and Type Metal-Clad (MC) Cable 2018.

H. NEMA WC 70 - Power Cables Rated 2000 Volts or Less for the Distribution of Electrical Energy 2021.

I. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

J. UL 44 - Thermoset-Insulated Wires and Cables Current Edition, Including All Revisions.

K. UL 83 - Thermoplastic-Insulated Wires and Cables Current Edition, Including All Revisions.

L. UL 486A-486B - Wire Connectors Current Edition, Including All Revisions.

M. UL 486C - Splicing Wire Connectors Current Edition, Including All Revisions.

N. UL 486D - Sealed Wire Connector Systems Current Edition, Including All Revisions.

O. UL 510 - Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape Current Edition, Including All Revisions.

P. UL 1569 - Metal-Clad Cables Current Edition, Including All Revisions.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for conductors and cables, including detailed information on materials, construction, ratings, listings, and available sizes, configurations, and stranding.

C. Design Data: Indicate voltage drop and ampacity calculations for aluminum conductors substituted for copper conductors. Include proposed modifications to raceways, boxes, wiring gutters, enclosures, etc. to accommodate substituted conductors.

1.05 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conductors and cables in accordance with manufacturer's instructions.

1.07 FIELD CONDITIONS

A. Do not install or otherwise handle thermoplastic-insulated conductors at temperatures lower than 14 degrees F, unless otherwise permitted by manufacturer's instructions. When installation below this temperature is unavoidable, notify Architect and obtain direction before proceeding with work.

PART 2 PRODUCTS

2.01 CONDUCTOR AND CABLE APPLICATIONS

A. Do not use conductors and cables for applications other than as permitted by NFPA 70 and product listing.

B. Provide single conductor building wire installed in suitable raceway unless otherwise indicated, permitted, or required.

C. Nonmetallic-sheathed cable is not permitted.

D. Metal-clad cable is permitted only as follows:
   1. Where not otherwise restricted, may be used:
      a. Where concealed above accessible ceilings for final connections from junction boxes to luminaires.
      b. Where concealed in hollow stud walls, above accessible ceilings, and under raised floors for branch circuits up to 20 A.
         1) Exception: Provide wires in raceway for circuit homerun from the first junction box located in the nearest concealed location to panelboard.
   2. In addition to other applicable restrictions, may not be used:
      a. Unless approved by Owner.
      b. Where exposed to damage.
      c. For damp, wet, or corrosive locations, unless provided with a PVC jacket listed as suitable for those locations.

2.02 CONDUCTOR AND CABLE GENERAL REQUIREMENTS

A. Provide products that comply with requirements of NFPA 70.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, etc. as required for a complete operating system.

D. Comply with NEMA WC 70.

E. Thermoplastic-Insulated Conductors and Cables: Listed and labeled as complying with UL 83.

F. Thermoset-Insulated Conductors and Cables: Listed and labeled as complying with UL 44.

G. Conductor Material:
   1. Provide copper conductors only. Aluminum conductors are not acceptable for this project. Conductor sizes indicated are based on copper.

2. Copper Conductors: Soft drawn annealed, 98 percent conductivity, uncoated copper conductors complying with ASTM B3, ASTM B8, or ASTM B787/B787M unless otherwise indicated.
3. Tinned Copper Conductors: Comply with ASTM B33.

H. Minimum Conductor Size:
1. Branch Circuits: 12 AWG.
a. Exceptions:
1) 20 A, 120 V circuits longer than 55 feet: 10 AWG, for 3% voltage drop.
2) 20 A, 120 V circuits longer than [95] feet ([29] m): 8 AWG, for 2% voltage drop.
3) 20 A, 120 V circuits longer than 145 feet: 6 AWG, for 3% voltage drop.
4) 20 A, 277 V circuits longer than 125 feet: 10 AWG, for 3% voltage drop.
5) 20 A, 277 V circuits longer than [210] feet ([64] m): 8 AWG, For 3% voltage drop.
2. Control Circuits: 14 AWG.

I. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

J. Conductor Color Coding:
1. Color code conductors as indicated unless otherwise required by the authority having jurisdiction. Maintain consistent color coding throughout project.
2. Color Coding Method: Integrally colored insulation.
3. Color Code:
a. 480Y/277 V, 3 Phase, 4 Wire System:
1) Phase A: Brown.
2) Phase B: Orange.
3) Phase C: Yellow.
4) Neutral/Grounded: Gray.
b. 208Y/120 V, 3 Phase, 4 Wire System:
1) Phase A: Black.
2) Phase B: Red.
3) Phase C: Blue.
4) Neutral/Grounded: White.
c. Equipment Ground, All Systems: Green.
d. Isolated Ground, All Systems: Green with yellow stripe.
e. For control circuits, comply with manufacturer's recommended color code.

2.03 SINGLE CONDUCTOR BUILDING WIRE

A. Description: Single conductor insulated wire.

B. Conductor Stranding:
1. Feeders and Branch Circuits:
a. Size 10 AWG and Smaller: Solid.
b. Size 8 AWG and Larger: Stranded.

C. Insulation Voltage Rating: 600 V.

D. Insulation:
1. Copper Building Wire: Type THHN/THWN, except as indicated below.

2.04 METAL-CLAD CABLE

A. Description: NFPA 70, Type MC cable listed and labeled as complying with UL 1569, and listed for use in classified firestop systems to be used.

B. Conductor Stranding:
1. Size 10 AWG and Smaller: Solid.
2. Size 8 AWG and Larger: Stranded.

C. Insulation Voltage Rating: 600 V.

D. Insulation: Type THHN, THHN/THWN, or THHN/THWN-2.

E. Grounding: Full-size integral equipment grounding conductor.

F. Provide UL listed 2-hour fire rated cable where indicated or required by code.

G. Armor: Steel, interlocked tape.

H. Provide PVC jacket applied over cable armor where indicated or required for environment of installed location.

2.05 WIRING CONNECTORS

A. Description: Wiring connectors appropriate for the application, suitable for use with the conductors to be connected, and listed as complying with UL 486A-486B or UL 486C as applicable.

B. Connectors for Grounding and Bonding: Comply with Section 260526.

C. Wiring Connectors for Splices and Taps:
1. Copper Conductors Size 8 AWG and Smaller: Use twist-on insulated spring connectors.
2. Copper Conductors Size 6 AWG and Larger: Use mechanical connectors or compression connectors.

D. Wiring Connectors for Terminations:
1. Provide terminal lugs for connecting conductors to equipment furnished with terminations designed for terminal lugs.
2. Copper Conductors Size 8 AWG and Larger: Use mechanical connectors or compression connectors where connectors are required.

E. Twist-on Insulated Spring Connectors: Rated 600 V, 221 degrees F for standard applications and 302 degrees F for high temperature applications; pre-filled with sealant and listed as complying with UL 486D for damp and wet locations.

F. Mechanical Connectors: Provide bolted type or set-screw type.

G. Compression Connectors: Provide circumferential type or hex type crimp configuration.

2.06 ACCESSORIES

A. Electrical Tape:
1. Manufacturers:
a. 3M: www.3m.com.
2. Vinyl Color Coding Electrical Tape: Integrally colored to match color code indicated; listed as complying with UL 510; minimum thickness of 7 mil; resistant to abrasion, corrosion, and sunlight; suitable for continuous temperature environment up to 221 degrees F.
3. Vinyl Insulating Electrical Tape: Complying with ASTM D3005 and listed as complying with UL 510; minimum thickness of 7 mil; resistant to abrasion, corrosion, and sunlight; conformable for application down to 0 degrees F and suitable for continuous temperature environment up to 221 degrees F.

B. Heat Shrink Tubing: Heavy-wall, split-resistant, with factory-applied adhesive; rated 600 V; suitable for direct burial applications; listed as complying with UL 486D.

C. Wire Pulling Lubricant: Listed; suitable for use with the conductors or cables to be installed and suitable for use at the installation temperature.

D. Cable Ties: Material and tensile strength rating suitable for application.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that interior of building has been protected from weather.

B. Verify that work likely to damage wire and cable has been completed.

C. Verify that raceways, boxes, and equipment enclosures are installed and are properly sized to accommodate conductors and cables in accordance with NFPA 70.

D. Verify that field measurements are as indicated.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Circuiting Requirements:
   1. Unless dimensioned, circuit routing indicated is diagrammatic.
   2. When circuit destination is indicated without specific routing, determine exact routing required.
   3. Arrange circuiting to minimize splices.
   4. Include circuit lengths required to install connected devices within 10 ft of location indicated.
   5. Maintain separation of Class 1, Class 2, and Class 3 remote-control, signaling, and power-limited circuits in accordance with NFPA 70.
   6. Maintain separation of wiring for emergency, legally required, and optional standby systems [essential system branches] in accordance with NFPA 70.

B. Install products in accordance with manufacturer's instructions.

C. Perform work in accordance with NECA 1 (general workmanship).

D. Install metal-clad cable (Type MC) in accordance with NECA 120.

E. Installation in Raceway:
   1. Tape ends of conductors and cables to prevent infiltration of moisture and other contaminants.
   2. Pull all conductors and cables together into raceway at same time.
   3. Do not damage conductors and cables or exceed manufacturer's recommended maximum pulling tension and sidewall pressure.
   4. Use suitable pulling means and wire pulling lubricant where necessary, except when lubricant is not recommended by the manufacturer.

F. Paralleled Conductors in Multiset Feeders: Install conductors of the same length and terminate in the same manner.

G. Secure and support conductors and cables in accordance with NFPA 70 using suitable supports and methods approved by the authority having jurisdiction. Provide independent support from building structure. Do not provide support from raceways, piping, ductwork, or other systems.

H. Terminate cables using suitable fittings.
   1. Metal-Clad Cable (Type MC):
      a. Use listed fittings.
      b. Cut cable armor only using specialized tools to prevent damaging conductors or insulation. Do not use hacksaw or wire cutters to cut armor.

I. Install conductors with a minimum of 12 inches of slack at each outlet.

J. Neatly train and bundle conductors inside boxes, wireways, panelboards and other equipment enclosures.

K. Group or otherwise identify neutral and equipment grounding conductors with associated ungrounded conductors inside enclosures in accordance with NFPA 70.

L. Make wiring connections using specified wiring connectors.
   1. Make splices and taps only in accessible boxes. Do not pull splices into raceways or make splices in conduit bodies or wiring gutters.
   2. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors.
   3. Do not remove conductor strands to facilitate insertion into connector.
   4. Clean contact surfaces on conductors and connectors to suitable remove corrosion, oxides, and other contaminates. Do not use wire brush on plated connector surfaces.

5. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
6. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

M. Insulate splices and taps that are made with uninsulated connectors using methods suitable for the application, with insulation and mechanical strength at least equivalent to unspliced conductors.

N. Insulate ends of spare conductors using vinyl insulating electrical tape.

O. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

P. Unless specifically indicated to be excluded, provide final connections to all equipment and devices, including those furnished by others, as required for a complete operating system.

END OF SECTION 260519

SECTION 260526
GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Grounding and bonding requirements.

B. Conductors for grounding and bonding.

C. Connectors for grounding and bonding.

1.02 RELATED REQUIREMENTS

A. Section 260519 - Low-Voltage Electrical Power Conductors and Cables: Additional requirements for conductors for grounding and bonding, including conductor color coding.

1.03 REFERENCE STANDARDS

A. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. NFPA 99 - Health Care Facilities Code; 2018 [2005 in NYC].

C. UL 467 - Grounding and Bonding Equipment Current Edition, Including All Revisions.

PART 2 PRODUCTS

2.01 GROUNDING AND BONDING REQUIREMENTS

A. Existing Work: Where existing grounding and bonding system components are indicated to be reused, they may be reused only where they are free from corrosion, integrity and continuity are verified, and where acceptable to the authority having jurisdiction.

B. Do not use products for applications other than as permitted by NFPA 70 and product listing.

C. Unless specifically indicated to be excluded, provide all required components, conductors, connectors, conduit, boxes, fittings, supports, accessories, etc. as necessary for a complete grounding and bonding system.

D. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

2.02 GROUNDING AND BONDING COMPONENTS

A. General Requirements:
   1. Provide products listed, classified, and labeled as suitable for the purpose intended.
   2. Provide products listed and labeled as complying with UL 467 where applicable.

B. Conductors for Grounding and Bonding, in Addition to Requirements of Section 260526:
   1. Use insulated copper conductors unless otherwise indicated.
      a. Exceptions:
         1) Use bare copper conductors where installed underground in direct contact with earth.
         2) Use bare copper conductors where directly encased in concrete (not in raceway).

C. Connectors for Grounding and Bonding:
   1. Description: Connectors appropriate for the application and suitable for the conductors and items to be connected; listed and labeled as complying with UL 467.
   2. Unless otherwise indicated, use exothermic welded connections for underground, concealed and other inaccessible connections.
   3. Unless otherwise indicated, use mechanical connectors, compression connectors, or exothermic welded connections for accessible connections.

END OF SECTION 260526

SECTION 260529
HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Support and attachment requirements and components for equipment, conduit, cable, boxes, and other electrical work.

1.02 REFERENCE STANDARDS

A. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products 2017.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware 2023.

C. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel 2023.

D. MFMA-4 - Metal Framing Standards Publication 2004.

E. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.03 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Comply with applicable building code.

C. All hangars, supports and anchorage to structure shall be selected by the manufacturer's authorized representative and approved by the project structural engineer.

D. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

E. Installer Qualifications for Field-Welding: As specified in Section 055000. Qualify processes and operators acording to AWS D1.1/D1.1M "Structural Welding Code - Steel.

F. Certify that each welder has passed AWS qualification tests for welding processesinvolved and that certification is current.

G. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.04 SUPPLEMENTARY STEEL

A. Furnish supplementary steel as required for proper installation, mounting and support of electrical work.

B. Connect supplementary steel firmly to building construction in an acceptable manner.

C. Determine type and size of supplementary steel. Supplementary steel shall be of sufficient strength and size to allow a minimum deflection of the span and in conformance with manufacturer's requirements of loading.

D. Install supplementary steel in a neat and workmanlike manner parallel to walls, floors and ceiling construction.

E. All supplementary steel and channel supports shall be submitted to the structural engineer for review

1.05 EXPANSION ANCHORS

A. Provide spacing and install anchors in accordance with manufacturer's recommendations.

B. Comply with ACI 318 as amended by the authority having jurisdiction.

C. All expansion anchors shall be submitted to the structural engineer for review.

D. File all post installed anchors and assist with special inspections where required by the authority having jurisdiction.

PART 2 PRODUCTS

2.01 SUPPORT AND ATTACHMENT COMPONENTS

A. General Requirements:
   1. Provide all required hangers, supports, anchors, fasteners, fittings, accessories, and hardware as necessary for the complete installation of electrical work.
   2. Provide products listed, classified, and labeled as suitable for the purpose intended, where applicable.
   3. Where support and attachment component types and sizes are not indicated, select in accordance with manufacturer's application criteria as required for the load to be supported with a minimum safety factor of 4.0. Include consideration for vibration, equipment operation, and shock loads where applicable.
   4. Do not use products for applications other than as permitted by NFPA 70 and product listing.
   5. Steel Components: Use corrosion resistant materials suitable for the environment where installed.
      a. Zinc-Plated Steel: Electroplated in accordance with ASTM B633.
      b. Galvanized Steel: Hot-dip galvanized after fabrication in accordance with ASTM A123/A123M or ASTM A153/A153M.

B. Conduit and Cable Supports: Straps, clamps, etc. suitable for the conduit or cable to be supported.
   1. Conduit Straps: One-hole or two-hole type; steel or malleable iron.
   2. Conduit Clamps: Bolted type unless otherwise indicated.

C. Outlet Box Supports: Hangers, brackets, etc. suitable for the boxes to be supported.

D. Metal Channel (Strut) Framing Systems: Factory-fabricated continuous-slot metal channel (strut) and associated fittings, accessories, and hardware required for field-assembly of supports.
   1. Comply with MFMA-4.
   2. Minimum Channel Thickness: 1/8 inch.
   3. Minimum Channel Dimensions: 1-1/2 inch width by 1-1/2 inch height.

E. Hanger Rods: Threaded zinc-plated steel unless otherwise indicated.

F. Anchors and Fasteners:
   1. Unless otherwise indicated and where not otherwise restricted, use the anchor and fastener types indicated for the specified applications.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

C. Unless specifically indicated or approved by Architect, do not provide support from suspended ceiling support system or ceiling grid.

D. Unless specifically indicated or approved by Architect, do not provide support from roof deck.

E. Do not penetrate or otherwise notch or cut structural members without approval of Structural Engineer.

F. Equipment Support and Attachment:
   1. Securely fasten floor-mounted equipment. Do not install equipment such that it relies on its own weight for support.

G. Remove temporary supports.

END OF SECTION 260529

SECTION 260533.13
CONDUIT FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Galvanized steel rigid metal conduit (RMC).
B. Intermediate metal conduit (IMC).
C. Flexible metal conduit (FMC).
D. Liquidtight flexible metal conduit (LFMC).
E. Electrical metallic tubing (EMT).
F. Conduit fittings.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.
B. Section 260526 - Grounding and Bonding for Electrical Systems.
C. Section 260529 - Hangers and Supports for Electrical Systems.

1.03 REFERENCE STANDARDS

A. ANSI C80.1 - American National Standard for Electrical Rigid Steel Conduit (ERSC) 2020.
B. ANSI C80.3 - American National Standard for Electrical Metallic Tubing -- Steel (EMT-S) 2020.
C. ANSI C80.6 - American National Standard for Electrical Intermediate Metal Conduit 2018.
D. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.
E. NECA 101 - Standard for Installing Steel Conduits (Rigid, IMC, EMT) 2020.
F. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable 2014.
G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
H. UL 1 - Flexible Metal Conduit Current Edition, Including All Revisions.
I. UL 6 - Electrical Rigid Metal Conduit-Steel Current Edition, Including All Revisions.
J. UL 360 - Liquid-Tight Flexible Metal Conduit Current Edition, Including All Revisions.
K. UL 514B - Conduit, Tubing, and Cable Fittings Current Edition, Including All Revisions.
L. UL 797 - Electrical Metallic Tubing-Steel Current Edition, Including All Revisions.
M. UL 1242 - Electrical Intermediate Metal Conduit-Steel Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate minimum sizes of conduits with the actual conductors to be installed, including adjustments for conductor sizes increased for voltage drop.
   2. Coordinate the arrangement of conduits with structural members, ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
   3. Verify exact conduit termination locations required for boxes, enclosures, and equipment installed under other sections or by others.
   4. Coordinate the work with other trades to provide roof penetrations that preserve the integrity of the roofing system and do not void the roof warranty.
   5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.
B. Sequencing:
   1. Do not begin installation of conductors and cables until installation of conduit is complete between outlet, junction and splicing points.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittals procedures.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store conduit and fittings in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 CONDUIT APPLICATIONS

A. Do not use conduit and associated fittings for applications other than as permitted by NFPA 70 and product listing.

B. Unless otherwise indicated and where not otherwise restricted, use the conduit types indicated for the specified applications. Where more than one listed application applies, comply with the most restrictive requirements. Where conduit type for a particular application is not specified, use galvanized steel rigid metal conduit.

C. Concealed Within Hollow Stud Walls: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

D. Concealed Above Accessible Ceilings: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

E. Interior, Damp or Wet Locations: Use galvanized steel rigid metal conduit.

F. Exposed, Interior, Not Subject to Physical Damage: Use galvanized steel rigid metal conduit, intermediate metal conduit (IMC), or electrical metallic tubing (EMT).

G. Exposed, Interior, Subject to Physical Damage: Use galvanized steel rigid metal conduit or intermediate metal conduit (IMC).

H. Connections to Vibrating Equipment:
   1. Dry Locations: Use flexible metal conduit.
   2. Damp, Wet, or Corrosive Locations: Use liquidtight flexible metal conduit.
   3. Maximum Length: 6 feet unless otherwise indicated.
   4. Vibrating equipment includes, but is not limited to:
      a. Transformers.
      b. Motors.

2.02 CONDUIT REQUIREMENTS

A. Provide all conduit, fittings, supports, and accessories required for a complete raceway system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Minimum Conduit Size, Unless Otherwise Indicated:
   1. Branch Circuits: 3/4 inch (21 mm) trade size.
   2. Control Circuits: 3/4 inch (21 mm) trade size.

D. Where conduit size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

2.03 GALVANIZED STEEL RIGID METAL CONDUIT (RMC)

A. Manufacturers:
   1. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com.
   2. Nucor Tubular Products: www.nucortubular.com.
   3. Western Tube, a division of Zekelman Industries: www.westerntube.com.
   4. Wheatland Tube, a division of Zekelman Industries: www.wheatland.com.

B. Description: NFPA 70, Type RMC galvanized steel rigid metal conduit complying with ANSI C80.1 and listed and labeled as complying with UL 6.

C. Fittings:
1. Manufacturers:
a. Bridgeport Fittings Inc: www.bptfittings.com.
b. O-Z/Gedney, a brand of Emerson Electric Co: www.emerson.com.
c. Thomas & Betts Corporation: www.tnb.com.
d. Substitutions: See Section 016000 - Product Requirements.
2. Non-Hazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
4. Connectors and Couplings: Use threaded type fittings only. Threadless set screw and compression (gland) type fittings are not permitted.

2.04 INTERMEDIATE METAL CONDUIT (IMC)

A. Manufacturers:
1. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com.
2. Nucor Tubular Products: www.nucortubular.com.
3. Western Tube, a division of Zekelman Industries: www.westerntube.com.
4. Wheatland Tube, a division of Zekelman Industries: www.wheatland.com.

B. Description: NFPA 70, Type IMC galvanized steel intermediate metal conduit complying with ANSI C80.6 and listed and labeled as complying with UL 1242.

C. Fittings:
1. Manufacturers:
a. Bridgeport Fittings Inc: www.bptfittings.com.
b. O-Z/Gedney, a brand of Emerson Electric Co: www.emerson.com.
c. Thomas & Betts Corporation: www.tnb.com.
2. Non-Hazardous Locations: Use fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
4. Connectors and Couplings: Use threaded type fittings only. Threadless set screw and compression (gland) type fittings are not permitted.

2.05 FLEXIBLE METAL CONDUIT (FMC)

A. Description: , Type FMC standard wall steel flexible metal conduit listed and labeled as complying with , and listed for use in classified firestop systems to be used.NFPA 70UL 1

B. Fittings:
1. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
2. Material: Use steel or malleable iron.

2.06 LIQUIDTIGHT FLEXIBLE METAL CONDUIT (LFMC)

A. Description: , Type LFMC polyvinyl chloride (PVC) jacketed steel flexible metal conduit listed and labeled as complying with .NFPA 70UL 360

B. Fittings:
1. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
2. Material: Use steel or malleable iron.

2.07 ELECTRICAL METALLIC TUBING (EMT)

A. Manufacturers:
1. Allied Tube & Conduit, a division of Atkore International: www.alliedeg.com.
2. Nucor Tubular Products: www.nucortubular.
3. Western Tube, a division of Zekelman Industries: www.westerntube.com.
4. Wheatland Tube, a division of Zekelman Industries: www.wheatland.com.

B. Description: NFPA 70, Type EMT steel electrical metallic tubing complying with ANSI C80.3 and listed and labeled as complying with UL 797.

C. Fittings:
1. Manufacturers:
a. Bridgeport Fittings Inc: www.bptfittings.com.
b. O-Z/Gedney, a brand of Emerson Electric Co: www.emerson.com.
c. Thomas & Betts Corporation: www.tnb.com.
2. Description: Fittings complying with NEMA FB 1 and listed and labeled as complying with UL 514B.
3. Material: Use steel or malleable iron.
4. Connectors and Couplings: Use compression (gland) or double set-screw type.
a. Do not use indenter type connectors and couplings.
b. Single set screw fittings are not permitted.cut

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive conduits.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install galvanized steel rigid metal conduit (RMC) in accordance with NECA 101.

D. Install intermediate metal conduit (IMC) in accordance with NECA 101.

E. Conduit Routing:
1. Unless dimensioned, conduit routing indicated is diagrammatic.
2. When conduit destination is indicated without specific routing, determine exact routing required. The final routing shall be coordinated with other trades and architects.

F. Conduit Support:
1. Secure and support conduits in accordance with and Section 260529 using suitable supports and methods approved by the authority having jurisdiction.NFPA 70
2. Provide independent support from building structure. Do not provide support from piping, ductwork, or other systems.

G. Connections and Terminations:
1. Use approved zinc-rich paint or conduit joint compound on field-cut threads of galvanized steel conduits prior to making connections.
2. Where two threaded conduits must be joined and neither can be rotated, use three-piece couplings or split couplings. Do not use running threads.
3. Use suitable adapters where required to transition from one type of conduit to another.
4. Provide drip loops for liquidtight flexible conduit connections to prevent drainage of liquid into connectors.
5. Terminate threaded conduits in boxes and enclosures using threaded hubs or double lock nuts for dry locations and raintight hubs for wet locations.
6. Provide insulating bushings or insulated throats at all conduit terminations to protect conductors.
7. Secure joints and connections to provide maximum mechanical strength and electrical continuity.

H. Penetrations:
1. Do not penetrate or otherwise notch or cut structural members, including footings and grade beams, without approval of Structural Engineer.
2. Make penetrations perpendicular to surfaces unless otherwise indicated.

3. Provide sleeves for penetrations as indicated or as required to facilitate installation. Set sleeves flush with exposed surfaces unless otherwise indicated or required.
4. Conceal bends for conduit risers emerging above ground.
5. Seal interior of conduits entering the building from underground at first accessible point to prevent entry of moisture and gases.
6. Where conduits penetrate waterproof membrane, seal as required to maintain integrity of membrane.
7. Make penetrations for roof-mounted equipment within associated equipment openings and curbs where possible to minimize roofing system penetrations. Where penetrations are necessary, seal as indicated or as required to preserve integrity of roofing system and maintain roof warranty. Include proposed locations of penetrations and methods for sealing with submittals.
8. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

I. Conduit Movement Provisions: Where conduits are subject to movement, provide expansion and expansion/deflection fittings to prevent damage to enclosed conductors or connected equipment. This includes, but is not limited to:
1. Where conduits cross structural joints intended for expansion, contraction, or deflection.
2. Where conduits are subject to earth movement by settlement or frost.

J. Condensation Prevention: Where conduits cross barriers between areas of potential substantial temperature differential, provide sealing fitting or approved sealing compound at an accessible point near the penetration to prevent condensation. This includes, but is not limited to:
1. Where conduits pass from outdoors into conditioned interior spaces.
2. Where conduits pass from unconditioned interior spaces into conditioned interior spaces.

K. Provide grounding and bonding in accordance with Section 260526.

3.03 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Repair cuts and abrasions in galvanized finishes using zinc-rich paint recommended by manufacturer. Replace components that exhibit signs of corrosion.

C. Correct deficiencies and replace damaged or defective conduits.

3.04 CLEANING

A. Clean interior of conduits to remove moisture and foreign matter.

3.05 PROTECTION

A. Immediately after installation of conduit, use suitable manufactured plugs to provide protection from entry of moisture and foreign material and do not remove until ready for installation of conductors.

END OF SECTION 260533.13

SECTION 260533.16
BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Outlet and device boxes up to 100 cubic inches, including those used as junction and pull boxes.

B. Cabinets and enclosures, including junction and pull boxes larger than 100 cubic inches.

C. Floor boxes.

1.02 RELATED REQUIREMENTS

A. Section 083100 - Access Doors and Panels: Panels for maintaining access to concealed boxes.

B. Section 260529 - Hangers and Supports for Electrical Systems.

C. Section 260533.13 - Conduit for Electrical Systems:
   1. Conduit bodies and other fittings.
   2. Additional requirements for locating boxes to limit conduit length and/or number of bends between pulling points.

D. Section 262726 - Wiring Devices:
   1. Wall plates.
   2. Floor box service fittings.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

B. NECA 130 - Standard for Installing and Maintaining Wiring Devices 2016.

C. NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit, Electrical Metallic Tubing, and Cable 2014.

D. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports 2013 (Reaffirmed 2020).

E. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2020.

F. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations Current Edition, Including All Revisions.

H. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations Current Edition, Including All Revisions.

I. UL 508A - Industrial Control Panels Current Edition, Including All Revisions.

J. UL 514A - Metallic Outlet Boxes Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades and architect to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   3. Coordinate minimum sizes of boxes with the actual installed arrangement of conductors, clamps, support fittings, and devices, calculated according to NFPA 70.
   4. Coordinate minimum sizes of pull boxes with the actual installed arrangement of connected conduits, calculated according to NFPA 70.

5. Coordinate the placement of boxes with millwork, furniture, devices, equipment, etc. installed under other sections or by others.
6. Coordinate the work with other trades to preserve insulation integrity.
7. Coordinate the work with other trades and architect to provide walls suitable for installation of flush-mounted boxes where indicated.
8. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for cabinets and enclosures, boxes for hazardous (classified) locations, floor boxes, and underground boxes/enclosures.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 BOXES

A. General Requirements:
1. Do not use boxes and associated accessories for applications other than as permitted by NFPA 70 and product listing.
2. Provide all boxes, fittings, supports, and accessories required for a complete raceway system and to accommodate devices and equipment to be installed.
3. Provide products listed, classified, and labeled as suitable for the purpose intended.
4. Where box size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.
5. Provide grounding terminals within boxes where equipment grounding conductors terminate.

B. Outlet and Device Boxes Up to 100 cubic inches, Including Those Used as Junction and Pull Boxes:
1. Use sheet-steel boxes for dry locations unless otherwise indicated or required.
2. Use cast iron boxes or cast aluminum boxes for damp or wet locations unless otherwise indicated or required; furnish with compatible weatherproof gasketed covers.
3. Use suitable concrete type boxes where flush-mounted in concrete.
4. Use suitable masonry type boxes where flush-mounted in masonry walls.
5. Use raised covers suitable for the type of wall construction and device configuration where required.
6. Use shallow boxes where required by the type of wall construction.
7. Do not use "through-wall" boxes designed for access from both sides of wall.
8. Sheet-Steel Boxes: Comply with NEMA OS 1, and list and label as complying with UL 514A.
9. Cast Metal Boxes: Comply with NEMA FB 1, and list and label as complying with UL 514A; furnish with threaded hubs.
10. Boxes for Supporting Luminaires and Ceiling Fans: Listed as suitable for the type and weight of load to be supported; furnished with fixture stud to accommodate mounting of luminaire where required.
11. Boxes for Ganged Devices: Use multigang boxes of single-piece construction. Do not use field-connected gangable boxes unless specifically indicated or permitted.
12. Wall Plates: Comply with Section 262726.

C. Cabinets and Enclosures, Including Junction and Pull Boxes Larger Than 100 cubic inches:

1. Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E, or UL 508A.
2. NEMA 250 Environment Type, Unless Otherwise Indicated:
3. Junction and Pull Boxes Larger Than 100 cubic inches:
    a. Provide screw-cover or hinged-cover enclosures unless otherwise indicated.

D. Floor Boxes:
1. Description: Floor boxes compatible with floor box service fittings provided in accordance with Section 262726; with partitions to separate multiple services; furnished with all components, adapters, and trims required for complete installation.
2. Manufacturer: Same as manufacturer of floor box service fittings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that mounting surfaces are ready to receive boxes.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install boxes in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards where mounting heights are not indicated.

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide separate boxes for emergency, legally required, optional standby, and normal power systems.

E. Unless otherwise indicated, provide separate boxes for line voltage and low voltage systems.

F. Where floor mounted power receptacle outlet and low voltage system outlet (IT, audio, video, etc.) occur at the same location, power and low voltage system devices shall be provided with a multiple gang box under a single cover plate as required.

G. Flush-mount boxes in finished areas unless specifically indicated to be surface-mounted.

H. Unless otherwise indicated, boxes may be surface-mounted where exposed conduits are indicated or permitted.

I. Box Locations:
1. Locate boxes to be accessible. Provide access panels in accordance with Section 083100 as required where approved by the Architect.
2. Unless dimensioned, box locations indicated are approximate.
3. Locate boxes so that wall plates do not span different building finishes.
4. Locate boxes so that wall plates do not cross masonry joints.
5. Unless otherwise indicated, where multiple outlet boxes are installed at the same location at different mounting heights, install along a common vertical center line.
6. Do not install flush-mounted boxes on opposite sides of walls back-to-back. Provide minimum 6 inches horizontal separation unless otherwise indicated.
7. Acoustic-Rated Walls: Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches horizontal separation.
8. Fire Resistance Rated Walls: Install flush-mounted boxes such that the required fire resistance will not be reduced.
    a. Do not install flush-mounted boxes on opposite sides of walls back-to-back; provide minimum 24 inches separation where wall is constructed with individual noncommunicating stud cavities or protect both boxes with listed putty pads.
    b. Do not install flush-mounted boxes with area larger than 16 square inches or such that the total aggregate area of openings exceeds 100 square inches for any 100

square feet of wall area.

9. Locate junction and pull boxes as indicated, as required to facilitate installation of conductors, and to limit conduit length and/or number of bends between pulling points in accordance with Section 260533.13.

J. Box Supports:
1. Secure and support boxes in accordance with NFPA 70 and Section 260529 using suitable supports and methods approved by the authority having jurisdiction.
2. Provide independent support from building structure except for cast metal boxes (other than boxes used for fixture support) supported by threaded conduit connections in accordance with NFPA 70. Do not provide support from piping, ductwork, or other systems.

K. Install boxes plumb and level.

L. Flush-Mounted Boxes:
1. Install boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that front edge of box or associated raised cover is not set back from finished surface more than 1/4 inch or does not project beyond finished surface.
2. Install boxes in combustible materials such as wood so that front edge of box or associated raised cover is flush with finished surface.
3. Repair rough openings around boxes in noncombustible materials such as concrete, tile, gypsum, plaster, etc. so that there are no gaps or open spaces greater than 1/8 inch at the edge of the box.

M. Install boxes as required to preserve insulation integrity.

N. Metallic Floor Boxes: Install box level at the proper elevation to be flush with finished floor.

O. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

P. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

Q. Close unused box openings.

R. Install blank wall plates on junction boxes and on outlet boxes with no devices or equipment installed or designated for future use.

S. Provide grounding and bonding in accordance with Section 260526.

3.03 CLEANING

A. Clean interior of boxes to remove dirt, debris, plaster and other foreign material.

3.04 PROTECTION

A. Immediately after installation, protect boxes from entry of moisture and foreign material until ready for installation of conductors.

END OF SECTION 260533.16

SECTION 260533.23
SURFACE RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Surface raceway systems.

B. Wireways.

Wall duct.

1.02 RELATED REQUIREMENTS

A. Section 260526 - Grounding and Bonding for Electrical Systems.

B. Section 260529 - Hangers and Supports for Electrical Systems.

C. Section 260533.13 - Conduit for Electrical Systems.

D. Section 260533.16 - Boxes for Electrical Systems.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

B. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. UL 870 - Wireways, Auxiliary Gutters, and Associated Fittings Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate the placement of raceways with millwork, furniture, equipment, etc. installed under other sections or by others.
2. Coordinate rough-in locations of outlet boxes provided under Section 260533.16 and conduit provided under Section 260533.13 as required for installation of raceways provided under this section.
3. Verify minimum sizes of raceways with the actual conductors and components to be installed.
4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:

1. Do not install raceways until final surface finishes and painting are complete.
2. Do not begin installation of conductors and cables until installation of raceways is complete between outlet, junction and splicing points.

1.05 SUBMITTALS

See Section 013000 - Administrative Requirements, for submittal procedures.

A. Product Data: Provide manufacturer's standard catalog pages and data sheets including dimensions, knockout sizes and locations, materials, fabrication details, finishes, service condition requirements, and accessories.

1. Surface Raceway Systems: Include information on fill capacities for conductors and cables.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

PART 2 PRODUCTS

2.01 RACEWAY REQUIREMENTS

A. Provide all components, fittings, supports, and accessories required for a complete raceway system.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Do not use raceways for applications other than as permitted by NFPA 70 and product listing.

2.02 WIREWAYS

A. Manufacturers:
1. Cooper B-Line, a division of Cooper Industries; _____: www.cooperindustries.com.
2. Hoffman, a brand of Pentair Technical Products; _____: www.hoffmanonline.com.
3. Schneider Electric; Square D Products; _____: www.schneider-electric.us.

B. Description: Lay-in wireways and wiring troughs with removable covers; listed and labeled as complying with UL 870.

C. Wireway Type, Unless Otherwise Indicated:

D. Where wireway size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes and conduit terminations are installed in proper locations and are properly sized in accordance with NFPA 70 to accommodate raceways.

C. Verify that mounting surfaces are ready to receive raceways and that final surface finishes are complete, including painting.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install raceways plumb and level.

D. Arrange wireways and associated raceway connections to comply with NFPA 70, including but not limited to requirements for deflected conductors and wireways used as pullboxes. Increase size of wireway where necessary.

E. Secure and support raceways in accordance with Section 260529 at intervals complying with NFPA 70 and manufacturer's requirements.

F. Close unused raceway openings.

G. Provide grounding and bonding in accordance with Section 260526.

3.03 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect raceways for damage and defects.

C. Correct wiring deficiencies and replace damaged or defective raceways.

3.04 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.05 PROTECTION

A. Protect installed raceways from subsequent construction operations.

END OF SECTION 260533.23

SECTION 260547
VIBRATION CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vibration isolation requirements.

B. Vibration-isolated equipment support bases.

C. Vibration isolators.

1.02 RELATED REQUIREMENTS

A. Section 033000 - Cast-in-Place Concrete.

B. Section 055000 - Metal Fabrications: Materials and requirements for fabricated metal supports.

C. Section 260529 - Hangers and Supports for Electrical Systems.

1.03 DEFINITIONS

A. Electrical Component: Where referenced in this section in regards to seismic controls, applies to any portion of the electrical system subject to seismic evaluation in accordance with applicable codes, including distributed systems (e.g., conduit, cable tray).

1.04 REFERENCE STANDARDS

A. ASCE 19 - Structural Applications of Steel Cables for Buildings 2016.

B. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications Most Recent Edition Cited by Referring Code or Reference Standard.

C. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2022.

D. MFMA-4 - Metal Framing Standards Publication 2004.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

F. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

G. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems 2008.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate selection and arrangement of vibration isolation and/or seismic control components with the actual equipment to be installed.
   2. Coordinate the work with other trades to provide additional framing and materials required for installation.
   3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
   4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 033000.

1.06 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, details, and calculations.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.

1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification methods for spring element load capacities.
2. Seismic Controls: Include seismic load capacities.

D. Shop Drawings - Vibration Isolation Systems:
1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators; indicate equipment weights and static deflections.
2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable; indicate equipment mounting provisions.

E. Evaluation Reports: For products specified as requiring evaluation and recognition by a qualified evaluation service, provide current evaluation reports.

F. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

G. Evidence of qualifications for manufacturer.

H. Manufacturer’s detailed field testing and inspection procedures.

I. Field quality control test reports.

1.07 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Comply with applicable building code.

C. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

D. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 VIBRATION ISOLATION SYSTEM MANUFACTURERS

A. Kinetics Noise Control, Inc; _____: www.kineticsnoise.com.

B. Mason Industries; _____: www.mason-ind.com.

C. Vibration Eliminator Company, Inc; _____: www.veco-nyc.com.

D. Vibration Mountings & Controls, Inc., Bloomingdale, NJ

E. Amber Booth, Houston, TX

2.02 VIBRATION ISOLATION REQUIREMENTS

A. Design and provide vibration isolation systems to reduce vibration transmission to supporting structure from vibration-producing electrical equipment and/or electrical connections to vibration-isolated equipment.

B. Comply with applicable general recommendations of ASHRAE (HVACA), where not in conflict with other specified requirements:

C. General Requirements:
1. Select vibration isolators to provide required static deflection.
2. Select vibration isolators for uniform deflection based on distributed operating weight of actual installed equipment.
3. Select seismic type vibration isolators to comply with seismic design requirements, including conditions of equipment seismic certification where applicable.
4. Select vibration isolators for outdoor equipment to comply with wind design requirements.
5. Select vibration-isolated equipment support bases and associated vibration isolators to provide minimum 2-inch operating clearance beneath base unless otherwise indicated.

D. Equipment Isolation:
1. Transformers:
a. Specified vibration isolators are in addition to any factory-installed internal core and coil assembly vibration isolators unless otherwise indicated.
b. Floor-Mounted Transformers, Nonseismic Applications: Use resilent material isolator pads, resilient material isolator mounts, or open (unhoused) spring isolators.
c. Floor-Mounted Transformers, Seismic Applications: Use seismic type resilient material isolator mounts or seismic type restrained spring isolators.
d. Suspended Transformers, Nonseismic Applications: Use resilient material isolator hangers, spring isolator hangers, or combination resilient material/spring isolator hangers.
e. Suspended Transformers, Seismic Applications: Use seismic type resilient material isolator hangers, seismic type spring isolator hangers, or seismic type combination resilient material/spring isolator hangers.
f. Wall-Mounted Transformers, Nonseismic Applications: Use resilient material isolator mounts.
g. Wall-Mounted Transformers, Seismic Applications: Use seismic type resilient material isolator mounts.
h. Minimum Static Deflection:
1) Transformers Mounted on Grade-Level Slabs: 0.25 inch deflection unless otherwise indicated.
2) Transformers Mounted at Above-Grade Levels: 0.5 inch deflection unless otherwise indicated.

2.03 VIBRATION-ISOLATED EQUIPMENT SUPPORT BASES

A. Vibration-Isolated Structural Steel Bases:
1. Description: Engineered structural steel frames with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.

2.04 VIBRATION ISOLATORS

A. General Requirements:
1. Resilient Materials for Vibration Isolators: Oil, ozone, and oxidant resistant.
2. Spring Elements for Spring Isolators:
a. Color code or otherwise identify springs to indicate load capacity.
b. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
c. Designed to operate in the linear portion of their load versus deflection curve over deflection range of not less than 50 percent above specified deflection.
d. Designed to provide additional travel to solid of not less than 50 percent of rated deflection at rated load.
e. Selected to provide designed deflection of not less than 75 percent of specified deflection.
f. Selected to function without undue stress or overloading.

B. Vibration Isolators for Nonseismic Applications:
1. Resilient Material Isolator Pads:
a. Description: Single or multiple layer pads utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material.
b. Pad Thickness: As required for specified minimum static deflection; minimum 0.25 inch thickness.
c. Multiple Layer Pads: Provide bonded, galvanized sheet metal separation plate between each layer.
2. Resilient Material Isolator Mounts, Nonseismic:
a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material; fail-safe type.
3. Open (Unhoused) Spring Isolators:

a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) without a housing.
b. Bottom Load Plate: Nonskid, molded, elastomeric isolator material or steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.
c. Furnished with integral leveling device for positioning and securing supported equipment.

4. Housed Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing.
   b. Furnished with integral elastomeric snubbing elements, nonadjustable type, for limiting equipment movement and preventing metal-to-metal contact between housing elements.
   c. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   d. Furnished with integral leveling device for positioning and securing supported equipment.
5. Restrained Spring Isolators, Nonseismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop.
   b. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
6. Resilient Material Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the lower hanger rod connection.
7. Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
8. Combination Resilient Material/Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the upper hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 CODE-REQUIRED SPECIAL INSPECTIONS

A. Arrange work to accommodate tests and/or inspections performed by Special Inspection Agency employed by Owner or Architect in accordance with Section 014533 and statement of special inspections as required by applicable building code.

B. Frequency of Special Inspections: Where special inspections are designated as continuous or periodic, arrange work accordingly.
   1. Continuous Special Inspections: Special Inspection Agency to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspections: Special Inspection Agency to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

C. Prior to starting work, Contractor to submit written statement of responsibility to authorities having jurisdiction and to Owner acknowledging awareness of special requirements contained in the statement of special inspections.

D. Special Inspection Agency services do not relieve Contractor from performing inspections and testing specified elsewhere.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install products in accordance with applicable requirements of NECA 1 (general workmanship).

C. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

D. Secure fasteners according to manufacturer's recommended torque settings.

E. Install flexible conduit and cable connections to provide sufficient slack for vibration isolation and/or seismic relative displacements as indicated or as required.

F. Vibration Isolation Systems:
   1. Vibration-Isolated Equipment Support Bases:
      a. Provide specified minimum clearance beneath base.
   2. Spring Isolators:
      a. Position equipment at operating height; provide temporary blocking as required.
      b. Lift equipment free of isolators prior to lateral repositioning to avoid damage to isolators.
      c. Level equipment by adjusting isolators gradually in sequence to raise equipment uniformly such that excessive weight or stress is not placed on any single isolator.
   3. Isolator Hangers:
      a. Use precompressed isolator hangers where required to facilitate installation and prevent damage to equipment utility connection provisions.
      b. Locate isolator hangers at top of hanger rods in accordance with manufacturer's instructions.
   4. Clean debris from beneath vibration-isolated equipment that could cause short-circuiting of isolation.
   5. Use elastomeric grommets for attachments where required to prevent short-circuiting of isolation.
   6. Adjust isolators to be free of isolation short circuits during normal operation.
   7. Do not overtighten fasteners such that resilient material isolator pads are compressed beyond manufacturer's maximum recommended deflection.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect vibration isolation and/or seismic control components for damage and defects.

C. Provide services of a manufacturer's authorized representative for vibration isolation systems to observe installation and assist in inspection and testing. Include manufacturer's detailed testing and inspection procedures and field reports with submittals.

D. Vibration Isolation Systems:
   1. Verify isolator static deflections.

2. Verify required clearance beneath vibration-isolated equipment support bases.
3. Verify vibration isolation performance during normal operation; investigate sources of isolation short circuits.

E. Correct deficiencies and replace damaged or defective vibration isolation and/or seismic control components.

F. Submit detailed reports indicating inspection and testing results and corrective actions taken.

END OF SECTION 260547

SECTION 260548
VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Vibration isolation requirements.

B. Seismic control requirements.
   1. Includes requirements for seismic qualification of equipment not specified in this section.

C. Vibration-isolated equipment support bases.

D. Vibration isolators.

E. External seismic snubber assemblies.

F. Seismic restraint systems.

1.02 RELATED REQUIREMENTS

A. Section 014533 - Code-Required Special Inspections and Procedures.

B. Section 033000 - Cast-in-Place Concrete.

C. Section 055000 - Metal Fabrications: Materials and requirements for fabricated metal supports.

D. Section 260529 - Hangers and Supports for Electrical Systems.

1.03 DEFINITIONS

A. Electrical Component: Where referenced in this section in regards to seismic controls, applies to any portion of the electrical system subject to seismic evaluation in accordance with applicable codes, including distributed systems (e.g., conduit, cable tray).

B. Seismic Restraint: Structural members or assemblies of members or manufactured elements specifically designed and applied for transmitting seismic forces between components and the seismic force-resisting system of the structure.

1.04 REFERENCE STANDARDS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures Most Recent Edition Cited by Referring Code or Reference Standard.

B. ASCE 19 - Structural Applications of Steel Cables for Buildings 2016.

C. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions 2022.

E. MFMA-4 - Metal Framing Standards Publication 2004.

F. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. SMACNA (SRM) - Seismic Restraint Manual Guidelines for Mechanical Systems 2008.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate selection and arrangement of vibration isolation and/or seismic control components with the actual equipment to be installed.
   2. Coordinate the work with other trades to provide additional framing and materials required for installation.
   3. Coordinate compatibility of support and attachment components with mounting surfaces at the installed locations.
   4. Seismic Controls:

a. Coordinate the arrangement of seismic restraints with ductwork, piping, equipment and other potential conflicts installed under other sections or by others.
b. Coordinate the work with other trades to accommodate relative positioning of essential and nonessential components in consideration of seismic interaction.

5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
1. Do not install products on or provide attachment to concrete surfaces until concrete has fully cured in accordance with Section 033000.

1.06 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Design Documents: Prepare and submit all information required for plan review and permitting by authorities having jurisdiction, including but not limited to floor plans, details, and calculations.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for products, including materials, fabrication details, dimensions, and finishes.
1. Vibration Isolators: Include rated load capacities and deflections; include information on color coding or other identification methods for spring element load capacities.
2. Seismic Controls: Include seismic load capacities.

D. Shop Drawings - Vibration Isolation Systems:
1. Include dimensioned plan views and sections indicating proposed arrangement of vibration isolators; indicate equipment weights and static deflections.
2. Vibration-Isolated Equipment Support Bases: Include base weights, including concrete fill where applicable; indicate equipment mounting provisions.

E. Shop Drawings - Seismic Controls:
1. Include dimensioned plan views and sections indicating proposed electrical component locations and distributed system routing, with locations and details of gravity supports and seismic restraints and associated attachments.
2. Identify mounting conditions required for equipment seismic qualification.
3. Identify anchor manufacturer, type, minimum embedment, minimum spacing, minimum member thickness, and minimum edge distance requirements.
4. Indicate proposed arrangement of distributed system trapeze support groupings.
5. Indicate proposed locations for distributed system flexible fittings and/or connections.
6. Indicate locations of seismic separations where applicable.

F. Seismic Design Data:
1. Compile information on project-specific characteristics of actual installed electrical components necessary for determining seismic design forces required to design appropriate seismic controls, including but not limited to the following.
a. Component operating weight and center of gravity.
b. Component elevation in the building in relation to the roof elevation (z/h).
c. Component importance factor (Ip).
d. For distributed systems, component materials and connection methods.
e. Component amplification factor (ap) and component response modification factor (Rp), determined in accordance with ASCE 7 tables.
f. Applicability of overstrength factor (for certain anchorage in concrete and masonry).
2. Include structural calculations, stamped or sealed by seismic controls designer, demonstrating suitability of seismic controls for seismic design forces.

G. Certification for seismically qualified equipment; identify basis for certification.

H. Evaluation Reports: For products specified as requiring evaluation and recognition by a qualified evaluation service, provide current evaluation reports.

I. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination,

preparation, and installation of product.

J. Evidence of qualifications for seismic controls designer.

K. Evidence of qualifications for manufacturer.

L. Manufacturer's detailed field testing and inspection procedures.

M. Field quality control test reports.

1.07 QUALITY ASSURANCE

A. Comply with NFPA 70.

B. Comply with applicable building code.

C. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

D. Seismic Controls Designer Qualifications: Registered professional engineer licensed in the State in which the Project is located and with minimum five years experience designing seismic restraints for nonstructural components.
   1. Designer may be employed by the manufacturer of the seismic restraint products.

E. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

F. ISAT, La Mirada, CA, http://www.isatsb.com/seismic-bracing.php

G. TOLCO by Eaton, Highland, IL

2.03 VIBRATION ISOLATION REQUIREMENTS

A. Design and provide vibration isolation systems to reduce vibration transmission to supporting structure from vibration-producing electrical equipment and/or electrical connections to vibration-isolated equipment.

B. Comply with applicable general recommendations of ASHRAE (HVACA), where not in conflict with other specified requirements:

C. General Requirements:
   1. Select vibration isolators to provide required static deflection.
   2. Select vibration isolators for uniform deflection based on distributed operating weight of actual installed equipment.
   3. Select seismic type vibration isolators to comply with seismic design requirements, including conditions of equipment seismic certification where applicable.

4. Select vibration isolators for outdoor equipment to comply with wind design requirements.
5. Select vibration-isolated equipment support bases and associated vibration isolators to provide minimum 2-inch operating clearance beneath base unless otherwise indicated.

D. Equipment Isolation:
1. Transformers:
a. Specified vibration isolators are in addition to any factory-installed internal core and coil assembly vibration isolators unless otherwise indicated.
b. Floor-Mounted Transformers, Nonseismic Applications: Use resilent material isolator pads, resilient material isolator mounts, or open (unhoused) spring isolators.
c. Floor-Mounted Transformers, Seismic Applications: Use seismic type resilient material isolator mounts or seismic type restrained spring isolators.
d. Suspended Transformers, Nonseismic Applications: Use resilient material isolator hangers, spring isolator hangers, or combination resilient material/spring isolator hangers.
e. Suspended Transformers, Seismic Applications: Use seismic type resilient material isolator hangers, seismic type spring isolator hangers, or seismic type combination resilient material/spring isolator hangers.
f. Wall-Mounted Transformers, Nonseismic Applications: Use resilient material isolator mounts.
g. Wall-Mounted Transformers, Seismic Applications: Use seismic type resilient material isolator mounts.
h. Minimum Static Deflection:
1) Transformers Mounted on Grade-Level Slabs: 0.25 inch deflection unless otherwise indicated.
2) Transformers Mounted at Above-Grade Levels: 0.5 inch deflection unless otherwise indicated.

2.04 SEISMIC CONTROL REQUIREMENTS

A. Design and provide electrical component restraints, supports, and attachments suitable for seismic loads determined in accordance with applicable codes, as well as gravity and operating loads and other structural design considerations of the installed location. Consider wind loads for outdoor electrical components.

B. Seismic Design Criteria: Obtain from project Structural Engineer of Record including Seismic Risk Category.

C. Component Importance Factor (Ip): For Seismic Risk Category IV, all electrical components to be assigned a component importance factor (Ip) of 1.5 unless otherwise indicated.

D. Component Importance Factor (Ip): Electrical components essential to life safety to be assigned a component importance factor (Ip) of 1.5 as indicated or as required. This includes but is not limited to:
1. Electrical components required to function for life safety purposes after an earthquake.
2. Electrical components that support or otherwise contain hazardous substances.

E. Seismic Restraints:
1. Provide seismic restraints for electrical components except where exempt according to applicable codes and specified seismic design criteria, as approved by authorities having jurisdiction.
2. Comply with applicable general recommendations of the following, where not in conflict with applicable codes, seismic design criteria, or other specified requirements:
a. ASHRAE (HVACA).
b. SMACNA (SRM).
3. Seismic restraint capacities to be verified by a Nationally Recognized Testing Laboratory (NRTL) or certified by an independent third-party registered professional engineer acceptable to authorities having jurisdiction.
4. Seismic Type Vibration Isolators:

a. Comply with seismic design requirements, including conditions of equipment seismic certification where applicable.

5. External Seismic Snubber Assemblies:
   a. Provide quantity and arrangement of external seismic snubber assemblies as required to restrain equipment in all directions (both lateral and vertical).
   b. Do not use external seismic snubber assemblies that restrain equipment only in one or more lateral directions (but not vertical) except where uplift forces are zero or are addressed by other restraints.
6. Seismic Restraint Systems:
   a. Except where otherwise restricted, use of either cable or rigid restraints is permitted.
   b. Use only cable restraints to restrain vibration-isolated electrical components, including distributed systems.
   c. Use only one restraint system type for a given electrical component or distributed system (e.g., conduit, cable tray) run; mixing of cable and rigid restraints on a given component/run is not permitted.
   d. Size restraint elements, including anchorage, to resist seismic loads as necessary to restrain electrical component in all lateral directions; consider bracket geometry in anchor load calculations.
   e. Use rod stiffener clips to attach bracing to hanger rods as required to prevent rod buckling from vertical (upward) compressive load introduced by cable or rigid restraints loaded in tension, in excess of downward tensile load due to supported electrical component weight.
   f. Select hanger rods and associated anchorage as required to accommodate vertical (downward) tensile load introduced by rigid restraints loaded in compression, in addition to downward tensile load due to supported electrical component weight.
   g. Clevis hangers may only be used for attachment of transverse restraints; do not use for attachment of longitudinal restraints.
   h. Where seismic restraints are attached to clevis hangers, provide clevis bolt reinforcement accessory to prevent clevis hanger deformation.
   i. Do not introduce lateral loads on open bar joist chords or the weak axis of beams, or loads in any direction at other than panel points unless approved by project Structural Engineer of Record.

F. Seismic Attachments:
1. Attachments to be bolted, welded, or otherwise positively fastened without consideration of frictional resistance produced by the effects of gravity.
2. Post-Installed Concrete and Masonry Anchors: Evaluated and recognized by ICC Evaluation Service, LLC (ICC-ES) or qualified evaluation service acceptable to authorities having jurisdiction for compliance with applicable building code, and qualified for seismic applications; concrete anchors to be qualified for installation in both cracked and uncracked concrete.
3. Do not use power-actuated fasteners.
4. Do not use friction clips (devices that rely on mechanically applied friction to resist loads). Beam clamps may be used for supporting sustained loads where provided with restraining straps.
5. Comply with anchor minimum embedment, minimum spacing, minimum member thickness, and minimum edge distance requirements.
6. Concrete Housekeeping Pads:
   a. Increase size of pad as required to comply with anchor requirements.
   b. Provide pad reinforcement and doweling to ensure integrity of pad and connection and to provide adequate load path from pad to supporting structure.

G. Seismic Interactions:
1. Include provisions to prevent seismic impact between electrical components and other structural or nonstructural components.
2. Include provisions such that failure of a component, either essential or nonessential, does not cause the failure of an essential component.

3. Comply with minimum clearance requirements between electrical equipment, distribution systems, and associated supports and fire protection sprinkler system drops and sprigs.

H. Seismic Relative Displacement Provisions:
1. Use suitable fittings or flexible connections to accommodate:
a. Relative displacements at connections between components, including distributed systems (e.g., conduit, cable tray); do not exceed load limits for equipment utility connections.
b. Relative displacements between component supports attached to dissimilar parts of structure that may move differently during an earthquake.
c. Design displacements at seismic separations.
d. Anticipated drifts between floors.
2. For seismic risk category, include provisions to prevent interruption of utility service due to seismic displacements.

2.05 VIBRATION-ISOLATED EQUIPMENT SUPPORT BASES

A. Vibration-Isolated Structural Steel Bases:
1. Description: Engineered structural steel frames with integral mounting provisions for vibration isolators, sized and configured for mounting of equipment.

2.06 VIBRATION ISOLATORS

A. General Requirements:
1. Resilient Materials for Vibration Isolators: Oil, ozone, and oxidant resistant.
2. Spring Elements for Spring Isolators:
a. Color code or otherwise identify springs to indicate load capacity.
b. Lateral Stability: Minimum lateral stiffness to vertical stiffness ratio of 0.8.
c. Designed to operate in the linear portion of their load versus deflection curve over deflection range of not less than 50 percent above specified deflection.
d. Designed to provide additional travel to solid of not less than 50 percent of rated deflection at rated load.
e. Selected to provide designed deflection of not less than 75 percent of specified deflection.
f. Selected to function without undue stress or overloading.
3. Seismic Snubbing Elements for Seismic Isolators:
a. Air Gap: Between 0.125 inches and 0.25 inches unless otherwise indicated.
b. Points of Contact: Cushioned with resilient material, minimum 0.25 inch thick; capable of being visually inspected for damage and replaced.

B. Vibration Isolators for Nonseismic Applications:
1. Resilient Material Isolator Pads:
a. Description: Single or multiple layer pads utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material.
b. Pad Thickness: As required for specified minimum static deflection; minimum 0.25 inch thickness.
c. Multiple Layer Pads: Provide bonded, galvanized sheet metal separation plate between each layer.
2. Resilient Material Isolator Mounts, Nonseismic:
a. Description: Mounting assemblies for bolting equipment to supporting structure utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material; fail-safe type.
3. Open (Unhoused) Spring Isolators:
a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) without a housing.
b. Bottom Load Plate: Nonskid, molded, elastomeric isolator material or steel with nonskid elastomeric isolator pad with provisions for bolting to supporting structure as required.

c. Furnished with integral leveling device for positioning and securing supported equipment.

4. Housed Spring Isolators:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing.
   b. Furnished with integral elastomeric snubbing elements, nonadjustable type, for limiting equipment movement and preventing metal-to-metal contact between housing elements.
   c. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   d. Furnished with integral leveling device for positioning and securing supported equipment.
5. Restrained Spring Isolators, Nonseismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop.
   b. Bottom Load Plate: Steel with nonskid, elastomeric isolator pad with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
6. Resilient Material Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the lower hanger rod connection.
7. Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
8. Combination Resilient Material/Spring Isolator Hangers, Nonseismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) or fiberglass isolator material for the upper hanger rod connection.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.

C. Vibration Isolators for Seismic Applications:
1. Restrained Spring Isolators, Seismic:
   a. Description: Isolator assembly consisting of single or multiple free-standing, laterally stable steel spring(s) in series with elastomeric (e.g., neoprene, rubber) isolator material within a metal housing designed to prevent movement of supported equipment above an adjustable vertical limit stop; specifically designed and rated for seismic applications with integral snubbing in all directions.
   b. Bottom Load Plate: Steel with provisions for bolting to supporting structure as required.
   c. Furnished with integral leveling device for positioning and securing supported equipment.
   d. Provides constant free and operating height.
2. Resilient Material Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing elastomeric (e.g., neoprene, rubber) isolator material for the lower hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.

3. Spring Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) in series with an elastomeric element for the lower hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.
4. Combination Resilient Material/Spring Isolator Hangers, Seismic:
   a. Description: Isolator assembly designed for installation in hanger rod suspension system utilizing single or multiple free-standing, laterally stable steel spring(s) for the lower hanger rod connection and elastomeric (e.g., neoprene, rubber) isolator material for the upper hanger rod connection; specifically designed and rated for seismic applications with vertical limit stop to prevent upward travel of hanger rod and cushion impact.
   b. Designed to accommodate misalignment of bottom hanger rod up to 30 degrees (plus/minus 15 degrees) without short-circuiting of isolation.

2.07 EXTERNAL SEISMIC SNUBBER ASSEMBLIES

A. Description: Steel snubbing assemblies designed for external attachment to both equipment and supporting structure that, as part of a complete system, restrain equipment motion in all directions during a seismic event while maintaining vibration isolation during normal operation.

B. Seismic Snubbing Elements:
   1. Air Gap: Between 0.125 inches and 0.25 inches unless otherwise indicated.
   2. Points of Contact: Cushioned with resilient material, minimum 0.25 inch thick; capable of being visually inspected for damage and replaced.

2.08 SEISMIC RESTRAINT SYSTEMS

A. Manufacturers:
   1. Source Limitations: Furnish seismic restraint system components and accessories produced by a single manufacturer and obtained from a single supplier.

B. Description: System components and accessories specifically designed for field assembly and attachment of seismic restraints.

C. Cable Restraints:
   1. Comply with ASCE 19.
   2. Cables: Pre-stretched, galvanized steel wire rope with certified break strength.
   3. Cable Connections: Use only swaged end fittings. Cable clips and wedge type end fittings are not permitted in accordance with ASCE 19.
   4. Use protective thimbles for cable loops where potential for cable damage exists.

D. Rigid Restraints: Use MFMA-4 steel channel (strut), steel angle, or steel pipe for structural element; suitable for both compressive and tensile design loads.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as shown on the drawings.

B. Verify that mounting surfaces are ready to receive vibration isolation and/or seismic control components and associated attachments.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 CODE-REQUIRED SPECIAL INSPECTIONS

A. Arrange work to accommodate tests and/or inspections performed by Special Inspection Agency employed by Owner or Architect in accordance with Section 014533 and statement of special inspections as required by applicable building code.

B. Frequency of Special Inspections: Where special inspections are designated as continuous or periodic, arrange work accordingly.
   1. Continuous Special Inspections: Special Inspection Agency to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspections: Special Inspection Agency to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

C. Prior to starting work, Contractor to submit written statement of responsibility to authorities having jurisdiction and to Owner acknowledging awareness of special requirements contained in the statement of special inspections.

D. Special Inspection Agency services do not relieve Contractor from performing inspections and testing specified elsewhere.

3.03 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install products in accordance with applicable requirements of NECA 1 (general workmanship).

C. Install anchors and fasteners in accordance with ICC Evaluation Services, LLC (ICC-ES) evaluation report conditions of use where applicable.

D. Secure fasteners according to manufacturer's recommended torque settings.

E. Install flexible conduit and cable connections to provide sufficient slack for vibration isolation and/or seismic relative displacements as indicated or as required.

F. Vibration Isolation Systems:
   1. Vibration-Isolated Equipment Support Bases:
      a. Provide specified minimum clearance beneath base.
   2. Spring Isolators:
      a. Position equipment at operating height; provide temporary blocking as required.
      b. Lift equipment free of isolators prior to lateral repositioning to avoid damage to isolators.
      c. Level equipment by adjusting isolators gradually in sequence to raise equipment uniformly such that excessive weight or stress is not placed on any single isolator.
   3. Isolator Hangers:
      a. Use precompressed isolator hangers where required to facilitate installation and prevent damage to equipment utility connection provisions.
      b. Locate isolator hangers at top of hanger rods in accordance with manufacturer's instructions.
   4. Clean debris from beneath vibration-isolated equipment that could cause short-circuiting of isolation.
   5. Use elastomeric grommets for attachments where required to prevent short-circuiting of isolation.
   6. Adjust isolators to be free of isolation short circuits during normal operation.
   7. Do not overtighten fasteners such that resilient material isolator pads are compressed beyond manufacturer's maximum recommended deflection.

G. Seismic Controls:
   1. Provide specified snubbing element air gap; remove any factory-installed spacers, debris or other obstructions.
   2. Use only specified components, anchorage, and hardware evaluated by seismic design. Comply with conditions of seismic certification where applicable.
   3. Where mounting hole diameter exceeds bolt diameter by more than 0.125 inch, use epoxy grout, elastomeric grommet, or welded washer to reduce clearance to 0.125 inch or less.
   4. Equipment with Sheet Metal Housings:
      a. Use Belleville washers to distribute stress over a larger surface area of the sheet metal connection interface as approved by manufacturer.

b. Attach additional steel as approved by manufacturer where required to transfer loads to structure.
c. Where mounting surface is irregular, do not shim housing; reinforce housing with additional steel as approved by manufacturer.

5. Concrete Housekeeping Pads:
   a. Size in accordance with seismic design to meet anchor requirements.
   b. Install pad reinforcement and doweling in accordance with seismic design to ensure integrity of pad and associated connection to slab.
6. Seismic Restraint Systems:
   a. Do not attach seismic restraints and gravity supports to dissimilar parts of structure that may move differently during an earthquake.
   b. Install restraints within permissible angles in accordance with seismic design.
   c. Install cable restraints straight between component/run and structural attachment; do not bend around other nonstructural components or structural elements.
   d. Install cable restraints for vibration-isolated components slightly slack to prevent short-circuiting of isolation.
   e. Install hanger rod stiffeners where indicated using only specified clamps; do not weld stiffeners to hanger rod.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect vibration isolation and/or seismic control components for damage and defects.

C. Provide services of a manufacturer's authorized representative for vibration isolation systems and seismic controls to observe installation and assist in inspection and testing. Include manufacturer's detailed testing and inspection procedures and field reports with submittals.

D. Vibration Isolation Systems:
   1. Verify isolator static deflections.
   2. Verify required clearance beneath vibration-isolated equipment support bases.
   3. Verify vibration isolation performance during normal operation; investigate sources of isolation short circuits.

E. Seismic Controls:
   1. Verify snubbing element air gaps.

F. Correct deficiencies and replace damaged or defective vibration isolation and/or seismic control components.

G. Submit detailed reports indicating inspection and testing results and corrective actions taken.

END OF SECTION 260548

SECTION 260553
IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical identification requirements.

B. Identification nameplates and labels.

C. Wire and cable markers.

D. Voltage markers.

E. Warning signs and labels.

1.02 RELATED REQUIREMENTS

A. Section 099113 - Exterior Painting.

B. Section 099123 - Interior Painting.

C. Section 260519 - Low-Voltage Electrical Power Conductors and Cables: Color coding for power conductors and cables 600 V and less; vinyl color coding electrical tape.

D. Section 262726 - Wiring Devices - Lutron: Device and wallplate finishes; factory pre-marked wallplates.

1.03 REFERENCE STANDARDS

A. ANSI Z535.2 - American National Standard for Environmental and Facility Safety Signs 2011 (Reaffirmed 2017).

B. ANSI Z535.4 - American National Standard for Product Safety Signs and Labels 2011 (Reaffirmed 2017).

C. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. NFPA 70E - Standard for Electrical Safety in the Workplace 2024.

E. UL 969 - Marking and Labeling Systems Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Verify final designations for equipment, systems, and components to be identified prior to fabrication of identification products.

B. Sequencing:
   1. Do not conceal items to be identified, in locations such as above suspended ceilings, until identification products have been installed.
   2. Do not install identification products until final surface finishes and painting are complete.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.07 FIELD CONDITIONS

A. Do not install adhesive products when ambient temperature is lower than recommended by manufacturer.

PART 2 PRODUCTS

2.01 IDENTIFICATION REQUIREMENTS

A. Identification for Equipment:

1. Use identification nameplate to identify each piece of electrical distribution and control equipment and associated sections, compartments, and components.
    a. Switchgear:
        1) Identify power source and circuit number. Include location when not within sight of equipment.
        2) Use identification nameplate to identify load(s) served for each branch device. Identify spares and spaces.
    b. Switchboards:
        1) Identify power source and circuit number. Include location when not within sight of equipment.
        2) Use identification nameplate to identify load(s) served for each branch device. Identify spares and spaces.
    c. Panelboards:
        1) Identify power source and circuit number. Include location when not within sight of equipment.
        2) Use typewritten circuit directory to identify load(s) served for panelboards with a door. Identify spares and spaces using pencil.
        3) For power panelboards without a door, use identification nameplate to identify load(s) served for each branch device. Identify spares and spaces.
    d. Transformers:
        1) Identify kVA rating.
        2) Identify K-factor rating.
        3) Identify voltage and phase for primary and secondary.
        4) Identify power source and circuit number. Include location when not within sight of equipment.
    e. Enclosed switches, circuit breakers, and motor controllers:
        1) Identify voltage and phase.
        2) Identify power source and circuit number. Include location when not within sight of equipment.
        3) Identify load(s) served. Include location when not within sight of equipment.
2. Available Fault Current Documentation: Use identification label to identify the available fault current and date calculations were performed at locations requiring documentation by NFPA 70 including but not limited to the following.
    a. Service equipment.
    b. Industrial control panels.
    c. Motor control centers.
    d. Elevator control panels.
    e. Industrial machinery.
3. Arc Flash Hazard Warning Labels: Use warning labels to identify arc flash hazards for electrical equipment, such as switchboards, panelboards, industrial control panels, meter socket enclosures, and motor control centers that are likely to require examination, adjustment, servicing, or maintenance while energized.
    a. Minimum Size: 3.5 by 5 inches.
    b. Legend: Include orange header that reads "WARNING", followed by the word message "Arc Flash and Shock Hazard; Appropriate PPE Required; Do not operate controls or open covers without appropriate personal protection equipment; Failure to comply may result in injury or death; Refer to NFPA 70E for minimum PPE requirements" or approved equivalent.

B. Identification for Conductors and Cables:
1. Color Coding for Power Conductors 600 V and Less: Comply with Section 260519.
2. Use identification nameplate or identification label to identify color code for ungrounded and grounded power conductors inside door or enclosure at each piece of feeder or branch-circuit distribution equipment when premises has feeders or branch circuits served by more than one nominal voltage system.

3. Use wire and cable markers to identify circuit number or other designation indicated for power, control, and instrumentation conductors and cables at the following locations:
   a. At each source and load connection.
   b. Within boxes when more than one circuit is present.
   c. Within equipment enclosures when conductors and cables enter or leave the enclosure.

C. Armored and Metal-Clad Identification Materials
1. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each cable size.
2. Colors for cables carrying circuits at 600V and Less:
   a. Black letters on an orange field.
   b. Legend: Indicate voltage and system or service type.

D. Identification for Raceways:
1. Use voltage markers or color-coded bands to identify systems other than normal power system for accessible conduits at maximum intervals of 20 feet.
   a. Color-Coded Bands: Use field-painting or vinyl color coding electrical tape to mark bands 3 inches wide.
      1) Color Code:
      2) Field-Painting: Comply with Section 099123 and 099113.
      3) Vinyl Color Coding Electrical Tape: Comply with Section 260519.

E. Identification for Boxes:
1. Use voltage markers to identify highest voltage present.
2. Use voltage markers or color coded boxes to identify systems other than normal power system.
   a. Color-Coded Boxes: Field-painted in accordance with Section 099123 and 099113 per the same color code used for raceways.

F. Identification for Devices:
1. Wiring Device and Wallplate Finishes: Comply with Section 262726.
2. Use identification label or engraved wallplate to identify serving branch circuit for all receptacles.
3. Use identification label or engraved wallplate to identify load controlled for wall-mounted control devices controlling loads that are not visible from the control location and for multiple wall-mounted control devices installed at one location.
4. Use identification label to identify receptacles protected by upstream GFI protection, where permitted.
5. Use identification label to identify automatically controlled receptacles by time switch, occupancy sensor device, etc.

2.02 IDENTIFICATION NAMEPLATES AND LABELS

A. Identification Nameplates:
1. Materials:
   a. Indoor Clean, Dry Locations: Use plastic nameplates.
2. Plastic Nameplates: Two-layer or three-layer laminated acrylic or electrically non-conductive phenolic with beveled edges; minimum thickness of 1/16 inch; engraved text.
3. Mounting Holes for Mechanical Fasteners: Two, centered on sides for sizes up to 1 inch high; Four, located at corners for larger sizes.

B. Identification Labels:
1. Materials: Use self-adhesive laminated plastic labels; UV, chemical, water, heat, and abrasion resistant.
2. Text: Use factory pre-printed or machine-printed text. Do not use handwritten text unless otherwise indicated.

C. Format for Equipment Identification:
1. Minimum Size: 1 inch by 2.5 inches.

2. Legend:
   a. Equipment designation or other approved description.
3. Text: All capitalized unless otherwise indicated.
4. Minimum Text Height:
   a. Equipment Designation: 1/2 inch.
   b. Other Information: 1/4 inch.
5. Color:
   a. Normal Power System: White text on black background.

2.03 WIRE AND CABLE MARKERS

A. Markers for Conductors and Cables: Use wrap-around self-adhesive vinyl cloth, wrap-around self-adhesive vinyl self-laminating, heat-shrink sleeve, plastic sleeve, plastic clip-on, or vinyl split sleeve type markers suitable for the conductor or cable to be identified.

B. Markers for Conductor and Cable Bundles: Use plastic marker tags secured by nylon cable ties.

C. Legend: Power source and circuit number or other designation indicated.

D. Text: Use factory pre-printed or machine-printed text, all capitalized unless otherwise indicated.

E. Minimum Text Height: 1/8 inch.

F. Color: Black text on white background unless otherwise indicated.

2.04 VOLTAGE MARKERS

A. Markers for Conduits: Use factory pre-printed self-adhesive vinyl, self-adhesive vinyl cloth, or vinyl snap-around type markers.

B. Markers for Boxes and Equipment Enclosures: Use factory pre-printed self-adhesive vinyl or self-adhesive vinyl cloth type markers.

C. Minimum Size:
   1. Markers for Conduits: As recommended by manufacturer for conduit size to be identified.
   2. Markers for Pull Boxes: 1 1/8 by 4 1/2 inches.
   3. Markers for Junction Boxes: 1/2 by 2 1/4 inches.

D. Legend:
   1. Markers for Voltage Identification: Highest voltage present.
   2. Markers for System Identification:

E. Color: Black text on orange background unless otherwise indicated.

2.05 WARNING SIGNS AND LABELS

A. Comply with ANSI Z535.2 or ANSI Z535.4 as applicable.

B. Warning Signs:
   1. Materials:
   2. Minimum Size: 7 by 10 inches unless otherwise indicated.

C. Warning Labels:
   1. Materials: Use factory pre-printed or machine-printed self-adhesive polyester or self-adhesive vinyl labels; UV, chemical, water, heat, and abrasion resistant; produced using materials recognized to UL 969.
   2. Machine-Printed Labels: Use thermal transfer process printing machines and accessories recommended by label manufacturer.
   3. Minimum Size: 2 by 4 inches unless otherwise indicated.

PART 3 EXECUTION

3.01 PREPARATION

A. Clean surfaces to receive adhesive products according to manufacturer's instructions.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Install identification products to be plainly visible for examination, adjustment, servicing, and maintenance. Unless otherwise indicated, locate products as follows:
   1. Surface-Mounted Equipment: Enclosure front.
   2. Flush-Mounted Equipment: Inside of equipment door.
   3. Free-Standing Equipment: Enclosure front; also enclosure rear for equipment with rear access.
   4. Elevated Equipment: Legible from the floor or working platform.
   5. Branch Devices: Adjacent to device.
   6. Interior Components: Legible from the point of access.
   7. Conduits: Legible from the floor.
   8. Boxes: Outside face of cover.
   9. Conductors and Cables: Legible from the point of access.
   10. Devices: Outside face of cover.

C. Install identification products centered, level, and parallel with lines of item being identified.

D. Secure nameplates to exterior surfaces of enclosures using stainless steel screws and to interior surfaces using self-adhesive backing or epoxy cement.

E. Install self-adhesive labels and markers to achieve maximum adhesion, with no bubbles or wrinkles and edges properly sealed.

F. Mark all handwritten text, where permitted, to be neat and legible.

3.03 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Replace self-adhesive labels and markers that exhibit bubbles, wrinkles, curling or other signs of improper adhesion.

END OF SECTION 260553

SECTION 260573
POWER SYSTEM STUDIES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Short-circuit study.

B. Protective device coordination study.

C. Arc flash and shock risk assessment.
   1. Includes arc flash hazard warning labels.

D. Criteria for the selection and adjustment of equipment and associated protective devices not specified in this section, as determined by studies to be performed.

1.02 RELATED REQUIREMENTS

A. Section 260553 - Identification for Electrical Systems: Additional requirements for arc flash hazard warning labels.

1.03 REFERENCE STANDARDS

A. IEEE 141 - IEEE Recommended Practice for Electric Power Distribution for Industrial Plants 1993 (Reaffirmed 1999).

B. IEEE 242 - IEEE Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems 2001, with Errata (2003).

C. IEEE 399 - IEEE Recommended Practice for Industrial and Commercial Power Systems Analysis 1997.

D. IEEE 551 - IEEE Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems 2006.

E. IEEE 1584 - IEEE Guide for Performing Arc-Flash Hazard Calculations 2018, with Errata (2019).

F. NEMA MG 1 - Motors and Generators 2021.

G. NETA ATS - Standard For Acceptance Testing Specifications For Electrical Power Equipment And Systems 2021.

H. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work to provide equipment and associated protective devices complying with criteria for selection and adjustment, as determined by studies to be performed.
   2. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

B. Sequencing:
   1. Submit study reports prior to or concurrent with product submittals.
   2. Do not order equipment until matching study reports and product submittals have both been evaluated by Architect.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Study reports, stamped or sealed and signed by study preparer.

C. Product Data: In addition to submittal requirements specified in other sections, include manufacturer's standard catalog pages and data sheets for equipment and protective devices indicating information relevant to studies.
   1. Include characteristic time-current trip curves for protective devices.
   2. Include impedance data for busway.

3. Include impedance data for engine generators.
4. Clearly indicate whether proposed short circuit current ratings are fully rated or, where acceptable, series rated systems.
5. Include documentation of listed series ratings upon request.
6. Identify modifications made in accordance with studies that:
   a. Can be made at no additional cost to Owner.
   b. As submitted will involve a change to the contract sum.

D. Project Record Documents: Revise studies as required to reflect as-built conditions.
1. Include hard copies with operation and maintenance data submittals.
2. Include computer software files used to prepare studies with file name(s) cross-referenced to specific pieces of equipment and systems.

1.06 POWER SYSTEM STUDIES

A. Scope of Studies:
1. Except where study descriptions below indicate exclusions, analyze system at each bus from primary protective devices of utility source down to each piece of equipment involved, including parts of system affecting calculations being performed (e.g. fault current contribution from motors).
2. Include in analysis alternate sources and operating modes (including known future configurations) to determine worst case conditions.

B. General Study Requirements:
1. Comply with NFPA 70.
2. Perform studies utilizing computer software complying with specified requirements; manual calculations are not permitted.

C. Data Collection:
1. Compile information on project-specific characteristics of actual installed equipment, protective devices, feeders, etc. as necessary to develop single-line diagram of electrical distribution system and associated input data for use in system modeling.
   a. Utility Source Data: Include primary voltage, maximum and minimum three-phase and line-to-ground fault currents, impedance, X/R ratio, and primary protective device information.
      1) Obtain up-to-date information from Utility Company.
   b. Generators: Include manufacturer/model, kW and voltage ratings, and impedance.
   c. Motors: Include manufacturer/model, type (e.g. induction, synchronous), horsepower rating, voltage rating, full load amps, and locked rotor current or NEMA MG 1 code letter designation.
   d. Transformers: Include primary and secondary voltage ratings, kVA rating, winding configuration, percent impedance, and X/R ratio.
   e. Protective Devices:
      1) Circuit Breakers: Include manufacturer/model, type (e.g. thermal magnetic, electronic trip), frame size, trip rating, voltage rating, interrupting rating, available field-adjustable trip response settings, and features (e.g. zone selective interlocking).
      2) Fuses: Include manufacturer/model, type/class (e.g. Class J), size/rating, and speed (e.g. time delay, fast acting).
   f. Protective Relays: Include manufacturer/model, type, settings, current/potential transformer ratio, and associated protective device.
   g. Conductors: Include feeder size, material (e.g. copper, aluminum), insulation type, voltage rating, number per phase, raceway type, and actual length.

D. Short-Circuit Study:
1. Comply with IEEE 551 and applicable portions of IEEE 141, IEEE 242, and IEEE 399.
2. For purposes of determining equipment short circuit current ratings, consider conditions that may result in maximum available fault current, including but not limited to:
   a. Maximum utility fault currents.

b. Maximum motor contribution.
c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

3. For each bus location, calculate the maximum available three-phase bolted symmetrical and asymmetrical fault currents. For grounded systems, also calculate the maximum available line-to-ground bolted fault currents.

E. Protective Device Coordination Study:
1. Comply with applicable portions of IEEE 242 and IEEE 399.
2. Analyze alternate scenarios considering known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).
3. Analyze protective devices and associated settings for suitable margins between time-current curves to achieve full selective coordination while providing adequate protection for equipment and conductors.

F. Arc Flash and Shock Risk Assessment:
1. Comply with NFPA 70E.
2. Perform incident energy and arc flash boundary calculations in accordance with IEEE 1584 (as referenced in NFPA 70E Annex D), where applicable.
3. Analyze alternate scenarios considering conditions that may result in maximum incident energy, including but not limited to:
a. Maximum and minimum utility fault currents.
b. Maximum and minimum motor contribution.
c. Known operating modes (e.g. utility as source, generator as source, utility/generator in parallel, bus tie breaker open/close positions).

G. Study Reports:
1. General Requirements:
a. Identify date of study and study preparer.
b. Identify study methodology and software product(s) used.
c. Identify scope of studies, assumptions made, implications of possible alternate scenarios, and any exclusions from studies.
d. Identify base used for per unit values.
e. Include single-line diagram and associated input data used for studies; identify buses on single-line diagram as referenced in reports, and indicate bus voltage.
f. Include conclusions and recommendations.
2. Short-Circuit Study:
a. For each scenario, identify at each bus location:
1) Calculated maximum available symmetrical and asymmetrical fault currents (both three-phase and line-to-ground where applicable).
2) Fault point X/R ratio.
3) Associated equipment short circuit current ratings.
b. Identify locations where the available fault current exceeds the equipment short circuit current rating, along with recommendations.
3. Protective Device Coordination Study:
a. For each scenario, include time-current coordination curves plotted on log-log scale graphs.
b. For each graph include (where applicable):
1) Partial single-line diagram identifying the portion of the system illustrated.
2) Protective Devices: Time-current curves with applicable tolerance bands for each protective device in series back to the source, plotted up to the maximum available fault current at the associated bus.
3) Conductors: Damage curves.
4) Transformers: Inrush points and damage curves.
5) Generators: Full load current, overload curves, decrement curves, and short circuit withstand points.
6) Motors: Full load current, starting curves, and damage curves.

7) Capacitors: Full load current and damage curves.

c. For each protective device, identify fixed and adjustable characteristics with available ranges and recommended settings.
   1) Circuit Breakers: Include long time pickup and delay, short time pickup and delay, and instantaneous pickup.
   2) Include ground fault pickup and delay.
   3) Include fuse ratings.
   4) Protective Relays: Include current/potential transformer ratios, tap, time dial, and instantaneous pickup.

d. Identify cases where either full selective coordination or adequate protection is not achieved, along with recommendations.

4. Arc Flash and Shock Risk Assessment:
   a. For the worst case for each scenario, identify at each bus location:
      1) Calculated incident energy and associated working distance.
      2) Calculated arc flash boundary.
      3) Bolted fault current.
      4) Arcing fault current.
      5) Clearing time.
      6) Arc gap distance.
   b. For purposes of producing arc flash hazard warning labels, summarize the maximum incident energy and associated data reflecting the worst case condition of all scenarios at each bus location.
   c. Identify locations where the calculated maximum incident energy exceeds 40 calories per sq cm.

1.07 QUALITY ASSURANCE

A. Study Preparer Qualifications: Professional electrical engineer licensed in the State in which the Project is located and with minimum five years experience in the preparation of studies of similar type and complexity using specified computer software.

B. Computer Software for Study Preparation: Use the latest edition of commercially available software utilizing specified methodologies.

PART 2 PRODUCTS

2.01 ARC FLASH HAZARD WARNING LABELS

A. Provide warning labels complying with ANSI Z535.4 to identify arc flash hazards for each work location analyzed by the arc flash and shock risk assessment.
   1. Materials: Comply with Section 260553.
   2. Legend: Provide custom legend in accordance with NFPA 70E based on equipment-specific data as determined by arc flash and shock risk assessment.
      a. Include the following information:
         1) Arc flash boundary.
         2) Available incident energy and corresponding working distance.
         3) Site-specific PPE (personnel protective equipment) requirements.
         4) Nominal system voltage.

PART 3 EXECUTION

3.01 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Adjust equipment and protective devices for compliance with studies and recommended settings.

D. Notify Architect of any conflicts with or deviations from studies. Obtain direction before proceeding.

END OF SECTION 260573

SECTION 260583
WIRING CONNECTIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Electrical connections to equipment.

1.02 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Obtain and review shop drawings, product data, manufacturer's wiring diagrams, and manufacturer's instructions for equipment furnished under other sections.
   2. Determine connection locations and requirements.

B. Sequencing:
   1. Install rough-in of electrical connections before installation of equipment is required.
   2. Make electrical connections before required start-up of equipment.

1.03 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide wiring device manufacturer’s catalog information showing dimensions, configurations, and construction.

1.04 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Products: Listed, classified, and labeled as suitable for the purpose intended.

PART 2 PRODUCTS

2.01 MATERIALS

A. Cords and Caps: NEMA WD 6; match receptacle configuration at outlet provided for equipment.
   1. Colors: Comply with NEMA WD 1.
   2. Cord Construction: NFPA 70, Type SO, multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
   3. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

B. Disconnect Switches: As specified in Section 262816.16 and in individual equipment sections.

C. Wiring Devices: As specified in Section 262726.

D. Flexible Conduit: As specified in Section 260533.13.

E. Wire and Cable: As specified in Section 260519.

F. Boxes: As specified in Section 260533.16.

2.02 EQUIPMENT CONNECTIONS

PART 3 EXECUTION

3.01 ELECTRICAL CONNECTIONS

A. Make electrical connections in accordance with equipment manufacturer's instructions.

B. Make conduit connections to equipment using rigid or flexible conduit as required. Use liquidtight flexible conduit with watertight connectors in damp or wet locations.

C. Connect heat producing equipment using wire and cable with insulation suitable for temperatures encountered.

D. Provide receptacle outlet to accommodate connection with attachment plug.

E. Provide cord and cap where field-supplied attachment plug is required.

F. Install suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.

G. Install disconnect switches, controllers, control stations, and control devices to complete equipment wiring requirements.

H. Install terminal block jumpers to complete equipment wiring requirements.

I. Install interconnecting conduit and wiring between devices and equipment to complete equipment wiring requirements.

LIGHTING FIXTURE SCHEDULE

SECTION 260916
ELECTRIC CONTROLS AND RELAYS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Pushbutton and selector switches.

B. Control stations and panels.

C. Relays and time-delay relays.

1.02 RELATED REQUIREMENTS

1.03 REFERENCE STANDARDS

A. NEMA ICS 1 - Industrial Control and Systems General Requirements 2022.

B. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Submit to NEMA ICS 1 indicating control panel layouts, wiring connections and diagrams, dimensions, support points.

C. Product Data: Provide for each component showing electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

1.05 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience, and with service facilities within 100 miles of Project.

C. Products: Listed, classified, and labeled as suitable for the purpose intended.

PART 2 PRODUCTS

2.01 MANUFACTURERS

2.02 COMPONENTS

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install individual relays and time-delay relays in enclosures.

C. Make electrical wiring interconnections as indicated.

END OF SECTION 260916

SECTION 260918
REMOTE CONTROL SWITCHING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

1.02 RELATED REQUIREMENTS

A. Section 260533.13 - Conduit for Electrical Systems.

1.03 REFERENCE STANDARDS

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data showing dimensions and ratings for components.

C. Shop Drawings: Indicate site specific detailed wiring diagrams of system, showing interface with branch circuit wiring.

D. Submit floor plans showing all lighting control system components, control zones and control intent.

PART 2 PRODUCTS

2.01 MANUFACTURERS

2.02 POWER LIMITED WIRE AND CABLE

A. Remote Control Cable: Copper conductor, 300 volt insulation rated 60 degrees C, individual conductors twisted together and covered with PVC jacket.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install wiring in the following locations in conduit in accordance with Section 260533.13:
   1. Within walls.
   2. Above inaccessible ceilings.
   3. Within hollow spaces used as air handling ducts and plenums.
   4. Exposed along surfaces.

B. Install relays to be accessible. Allow space for adequate ventilation and circulation of air.

3.02 CLOSEOUT ACTIVITIES

A. Demonstrate proper operation of system.

END OF SECTION 260918

SECTION 260923
LIGHTING CONTROL DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Occupancy sensors.

B. Time switches.

C. Outdoor photo controls.

D. Daylighting controls.

E. Lighting contactors.

F. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 260529 - Hangers and Supports for Electrical Systems

B. Section 260533.16 - Boxes for Electrical Systems.

C. Section 262726 - Wiring Devices: Devices for manual control of lighting, including wall switches, wall dimmers, and fan speed controllers.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

B. NECA 130 - Standard for Installing and Maintaining Wiring Devices 2016.

C. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. UL 1472 - Solid-State Dimming Controls Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the placement of lighting control devices with millwork, furniture, equipment, etc. installed under other sections or by others.
   2. Coordinate the placement of wall switch occupancy sensors with actual installed door swings.
   3. Coordinate the placement of occupancy sensors with millwork, furniture, equipment or other potential obstructions to motion detection coverage installed under other sections or by others.
   4. Coordinate the placement of photo sensors for daylighting controls with windows, skylights, and luminaires to achieve optimum operation. Coordinate placement with ductwork, piping, equipment, or other potential obstructions to light level measurement installed under other sections or by others.
   5. Notify Architect of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

B. Sequencing:

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Include ratings, configurations, standard wiring diagrams, dimensions, colors, service condition requirements, and installed features.
   1. Occupancy Sensors: Include detailed motion detection coverage range diagrams.

C. Shop Drawings:
   1. Occupancy Sensors: Provide lighting plan indicating location, model number, and orientation of each occupancy sensor and associated system component.

D. Field Quality Control Reports.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Store products in a clean, dry space in original manufacturer's packaging in accordance with manufacturer's written instructions until ready for installation.

1.08 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

1.09 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

PART 2 PRODUCTS

2.01 LIGHTING CONTROL DEVICES - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless specifically indicated to be excluded, provide all required conduit, wiring, connectors, hardware, components, accessories, etc. as required for a complete operating system.

2.02 OCCUPANCY SENSORS

A. Manufacturers:
   1. Hubbell Incorporated; _____: www.hubbell.com.
   2. Lutron Electronics Company, Inc; _____: www.lutron.com.
   3. Sensor Switch Inc; _____: www.sensorswitch.com.
   4. WattStopper; _____: www.wattstopper.com.

B. All Occupancy Sensors:
   1. Description: Factory-assembled commercial specification grade devices for indoor use capable of sensing both major motion, such as walking, and minor motion, such as small desktop level movements, according to published coverage areas, for automatic control of load indicated.
   2. Sensor Technology:
      a. Passive Infrared (PIR) Occupancy Sensors: Designed to detect occupancy by sensing movement of thermal energy between zones.
      b. Passive Infrared/Ultrasonic Dual Technology Occupancy Sensors: Designed to detect occupancy using a combination of both passive infrared and ultrasonic technologies.
   3. Provide LED to visually indicate motion detection with separate color LEDs for each sensor type in dual technology units.
   4. Operation: Unless otherwise indicated, occupancy sensor to turn load on when occupant presence is detected and to turn load off when no occupant presence is detected during an adjustable turn-off delay time interval.
   5. Dual Technology Occupancy Sensors: Field configurable turn-on and hold-on activation with settings for activation by either or both sensing technologies.
   6. Passive Infrared Lens Field of View: Field customizable by addition of factory masking material, adjustment of integral blinders, or similar means to block motion detection in selected areas.
   7. Turn-Off Delay: Field adjustable, with time delay settings up to 30 minutes.
   8. Compatibility (Non-Dimming Sensors): Suitable for controlling incandescent lighting, low-voltage lighting with electronic and magnetic transformers, fluorescent lighting with electronic and magnetic ballasts, and fractional motor loads, with no minimum load requirements.

C. Wall Switch Occupancy Sensors:
   1. All Wall Switch Occupancy Sensors:

a. Description: Occupancy sensors designed for installation in standard wall box at standard wall switch mounting height with a field of view of 180 degrees, integrated manual control capability, and no leakage current to load in off mode.
b. Unless otherwise indicated or required to control the load indicated on drawings, provide line voltage units with self-contained relay.
c. Where indicated, provide two-circuit units for control of two separate lighting loads, with separate manual controls and separately programmable operation for each load.
d. Operation: Field selectable to operate either as occupancy sensor (automatic on/off) or as vacancy sensor (manual-on/automatic off).
e. Manual-Off Override Control: When used to turn off load while in automatic-on mode, unit to revert back to automatic mode after no occupant presence is detected during the delayed-off time interval.

D. Wall Dimmer Occupancy Sensors:
1. General Requirements:
a. Description: Occupancy sensors designed for installation in standard wall box at standard wall switch mounting height with a field of view of 180 degrees, integrated dimming control capability , and no leakage current to load in off mode.
b. Operation: Field selectable to operate either as occupancy sensor (automatic on/off) or as vacancy sensor (manual-on/automatic off).
c. Manual-Off Override Control Capability: When used to turn off load while in automatic-on mode, unit to revert back to automatic mode after no occupant presence is detected during the delayed-off time interval.
d. Dimmer: Solid-state with continuous full-range even control following square law dimming curve, integral radio frequency interference filtering, power failure preset memory, air gap switch accessible without removing wall plate, and listed as complying with UL 1472; type and rating suitable for load controlled.
2. Passive Infrared (PIR) Wall Dimmer Occupancy Sensors: Capable of detecting motion within an area of 900 square feet.

E. Ceiling Mounted Occupancy Sensors:
1. All Ceiling Mounted Occupancy Sensors:
a. Description: Low profile occupancy sensors designed for ceiling installation.
b. Unless otherwise indicated or required to control the load indicated on drawings, provide low voltage units, for use with separate compatible accessory power packs.
c. Occupancy sensor to be field selectable as either manual-on/automatic-off or automatic on/off.
2. Passive Infrared (PIR) Ceiling Mounted Occupancy Sensors:
a. Standard Range Sensors: Capable of detecting motion within an area of 450 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.
3. Passive Infrared/Ultrasonic Dual Technology Ceiling Mounted Occupancy Sensors:
a. Standard Range Sensors: Capable of detecting motion within an area of 450 square feet at a mounting height of 9 feet, with a field of view of 360 degrees.

F. Power Packs for Low Voltage Occupancy Sensors:
1. Description: Plenum rated, self-contained low voltage class 2 transformer and relay compatible with specified low voltage occupancy sensors for switching of line voltage loads.
2. Provide quantity and configuration of power and slave packs with all associated wiring and accessories as required to control the load indicated on drawings.
3. Input Supply Voltage: Dual rated for 120/277 V ac.
4. Load Rating: As required to control the load indicated on drawings.

G. Power Packs for Wireless Occupancy Sensors:
1. Description: Plenum rated, self-contained relay compatible with specified wireless occupancy sensors for switching of line voltage loads.
2. Input Supply Voltage: Dual rated for 120/277 V ac.
3. Load Rating: As required to control the load indicated on drawings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that openings for outlet boxes are neatly cut and will be completely covered by devices or wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that branch circuit wiring installation is completed, tested, and ready for connection to lighting control devices.

F. Verify that the service voltage and ratings of lighting control devices are appropriate for the service voltage and load requirements at the location to be installed.

G. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Install lighting control devices in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 260533.16 as required for installation of lighting control devices provided under this section.

C. Install lighting control devices in accordance with manufacturer's instructions.

D. Unless otherwise indicated, connect lighting control device grounding terminal or conductor to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

E. Install lighting control devices plumb and level, and held securely in place.

F. Where required and not furnished with lighting control device, provide wall plate in accordance with Section 262726.

G. Provide required supports in accordance with Section 260529.

H. Where applicable, install lighting control devices and associated wall plates to fit completely flush to mounting surface with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

I. Occupancy Sensor Locations:
   1. Locate ultrasonic and dual technology passive infrared/ultrasonic occupancy sensors a minimum of 4 feet from air supply ducts or other sources of heavy air flow and as per manufacturer's recommendations, in order to minimize false triggers.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect each lighting control device for damage and defects.

C. Test occupancy sensors to verify proper operation, including time delays and ambient light thresholds where applicable. Verify optimal coverage for entire room or area. Record test results in written report to be included with submittals.

D. Correct wiring deficiencies and replace damaged or defective lighting control devices.

3.05 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

B. Adjust occupancy sensor settings to minimize undesired activations while optimizing energy savings, and to achieve desired function as indicated or as directed by Architect.

C. Where indicated or as directed by Architect, install factory masking material or adjust integral blinders on passive infrared (PIR) and dual technology occupancy sensor lenses to block undesired motion detection.

3.06 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.07 CLOSEOUT ACTIVITIES

A. Training: Train Owner's personnel on operation, adjustment, programming, and maintenance of lighting control devices.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide minimum of two hours of training.
   3. Instructor: Qualified contractor familiar with the project and with sufficient knowledge of the installed lighting control devices.
   4. Location: At project site.

END OF SECTION 260923

SECTION 262416
PANELBOARDS

PART 1 GENERAL

1.01 RELATED REQUIREMENTS

A. Section 260526 - Grounding and Bonding for Electrical Systems.

B. Section 260529 - Hangers and Supports for Electrical Systems.

1.02 REFERENCE STANDARDS

A. FS W-C-375 - Circuit Breakers, Molded Case; Branch Circuit and Service 2013e, with Amendment (2017).

B. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

C. NECA 407 - Standard for Installing and Maintaining Panelboards 2015.

D. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2020.

E. NEMA PB 1 - Panelboards 2011.

F. NEMA PB 1.1 - General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less 2013.

G. NETA ATS - Standard For Acceptance Testing Specifications For Electrical Power Equipment And Systems 2021.

H. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations Current Edition, Including All Revisions.

J. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations Current Edition, Including All Revisions.

K. UL 67 - Panelboards Current Edition, Including All Revisions.

L. UL 489 - Molded-Case Circuit Breakers, Molded-Case Switches and Circuit Breaker Enclosures Current Edition, Including All Revisions.

1.03 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades to avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and working clearances for electrical equipment required by NFPA 70.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   3. Coordinate the work with other trades to provide walls suitable for installation of flush-mounted panelboards where indicated.
   4. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
   5. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for panelboards, enclosures, overcurrent protective devices, surge protection devices, finishes, and other installed components and accessories.

C. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, overcurrent protective device arrangement and sizes, short circuit current ratings, conduit entry locations, conductor terminal information, enclosure types, and installed features and accessories.

1.05 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store panelboards in accordance with manufacturer's instructions and NECA 407.

B. Store in a clean, dry space that is continuously under normal control of temperature and humidity. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

C. Handle carefully in accordance with NECA 407, NEMA PB-1 and manufacturer's written instructions to avoid damage to panelboard internal components, enclosure, and finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. ABB/GE: www.geindustrial.com/#sle.

B. Eaton Corporation: www.eaton.com/#sle.

C. Schneider Electric; Square D Products; _____: www.schneider-electric.us/#sle.

D. Siemens Industry, Inc; _____: www.usa.siemens.com/#sle.

2.02 PANELBOARDS - GENERAL REQUIREMENTS

A. Provide products listed, classified, and labeled as suitable for the purpose intended.

B. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
   1. Altitude: Less than 6,600 feet.
   2. Ambient Temperature:
      a. Panelboards Containing Circuit Breakers: Between 23 degrees F and 104 degrees F.

C. Short Circuit Current Rating:
   1. Provide panelboards with listed short circuit current rating not less than the available fault current at the installed location as indicated on the drawings.

D. Mains: Configure for top or bottom incoming feed as indicated or as required for the installation.

E. Branch Overcurrent Protective Devices: Replaceable without disturbing adjacent devices.

F. Bussing: Sized in accordance with UL 67 temperature rise requirements.
   1. Provide solidly bonded equipment ground bus in each panelboard, with a suitable lug for each feeder and branch circuit equipment grounding conductor.

G. Conductor Terminations: Suitable for use with the conductor material and sizes to be installed.

H. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
   1. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:
   2. Boxes: Galvanized steel unless otherwise indicated.
      a. Provide wiring gutters sized to accommodate the conductors to be installed.
   3. Fronts:
      a. Fronts for Surface-Mounted Enclosures: Same dimensions as boxes.
      b. Fronts for Flush-Mounted Enclosures: Overlap boxes on all sides to conceal rough opening.
   4. Lockable Doors: All locks keyed alike unless otherwise indicated.

I. Future Provisions: Prepare all unused spaces for future installation of devices including bussing, bus connectors, filler plates, mounting hardware and all other required provisions.

2.03 POWER OR DISTRIBUTION PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, power and feeder distribution type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:
   1. Main and Neutral Lug Material: Copper, suitable for terminating aluminum or copper conductors.
   2. Main and Neutral Lug Type: Mechanical.

C. Bussing:
   1. Phase and Neutral Bus Material: Copper.
   2. Ground Bus Material: Copper.

D. Circuit Breakers:
   1. Provide bolt-on type or plug-in type secured with locking mechanical restraints.

E. Enclosures:
   1. Provide surface-mounted enclosures unless otherwise indicated. In no case shall the enclosure be wider than 42 inches (106 cm) or deeper than 18 inches (46 cm).

2.04 LIGHTING AND APPLIANCE PANELBOARDS

A. Description: Panelboards complying with NEMA PB 1, lighting and appliance branch circuit type, circuit breaker type, and listed and labeled as complying with UL 67; ratings, configurations and features as indicated on the drawings.

B. Conductor Terminations:
   1. Main and Neutral Lug Material: Copper, suitable for terminating aluminum or copper conductors..
   2. Main and Neutral Lug Type: Mechanical.

C. Bussing:
   1. Phase Bus Connections: Arranged for sequential phasing of overcurrent protective devices.
   2. Phase and Neutral Bus Material: Copper.
   3. Ground Bus Material: Copper.

D. Circuit Breakers: Thermal magnetic bolt-on type unless otherwise indicated.

E. Enclosures:
   1. Provide surface-mounted or flush-mounted enclosures as indicated. Enclosure width and depth shall not exceed 24 inches (61 cm) by 6 inches (15 cm) respectively.
   2. Provide clear plastic circuit directory holder metal frame mounted on inside of door.

2.05 OVERCURRENT PROTECTIVE DEVICES

A. Molded Case Circuit Breakers:
   1. Description: Quick-make, quick-break, over center toggle, trip-free, trip-indicating circuit breakers listed and labeled as complying with UL 489, and complying with FS W-C-375 where applicable; ratings, configurations, and features as indicated on the drawings.
   2. Interrupting Capacity:
      a. Provide circuit breakers with interrupting capacity as required by short circuit study performed in accordance with Section 26 0573.
      b. Fully Rated Systems: Provide circuit breakers with interrupting capacity not less than the short circuit current rating indicated.
   3. Conductor Terminations:
      a. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   4. Thermal Magnetic Circuit Breakers: For each pole, furnish thermal inverse time tripping element for overload protection and magnetic instantaneous tripping element for short circuit protection.
   5. Multi-Pole Circuit Breakers: Furnish with common trip for all poles.

PART 3 EXECUTION

3.01 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship).

B. Install products in accordance with manufacturer's instructions.

C. Install panelboards in accordance with NECA 407 and NEMA PB 1.1.

D. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

E. Provide required support and attachment in accordance with Section 260529.

F. Install panelboards plumb.

G. Install flush-mounted panelboards so that trims fit completely flush to wall with no gaps and rough opening completely covered.

H. Mount panelboards such that the highest position of any operating handle for circuit breakers or switches does not exceed 79 inches above the floor or working platform.

I. Provide minimum of four spare 1 inch trade size conduits out of each flush-mounted panelboard stubbed into accessible space above ceiling or space designated to be accessible ceiling space in the future. Provide four 1-inch (27-mm) empty conduits [into raised floor space or] below slab not on grade.

J. Provide grounding and bonding in accordance with Section 260526.

K. Install all field-installed branch devices, components, and accessories.

L. Provide filler plates to cover unused spaces in panelboards.

3.02 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Molded Case Circuit Breakers: Perform inspections and tests listed in NETA ATS, Section 7.6.1.1 for all main circuit breakers and circuit breakers larger than _____ amperes. Tests listed as optional are not required.

D. Correct deficiencies and replace damaged or defective panelboards or associated components and retest to demonstrate compliance.

3.03 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings.

B. Adjust alignment of panelboard fronts.

3.04 CLEANING

A. Clean dirt and debris from panelboard enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262416

SECTION 262726
WIRING DEVICES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Wall switches.

B. Wall dimmers.

C. Receptacles.

D. Wall plates.

E. Poke-through assemblies.

1.02 RELATED REQUIREMENTS

A. Section 260533.16 - Boxes for Electrical Systems.

1.03 REFERENCE STANDARDS

A. FS W-C-596 - Connector, Electrical, Power, General Specification for 2014h, with Amendments (2017).

B. FS W-S-896 - Switches, Toggle (Toggle and Lock), Flush Mounted (General Specification) 2014g, with Amendment (2017).

C. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

D. NECA 130 - Standard for Installing and Maintaining Wiring Devices 2016.

E. NEMA WD 1 - General Color Requirements for Wiring Devices 1999 (Reaffirmed 2020).

F. NEMA WD 6 - Wiring Devices - Dimensional Specifications 2021.

G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. UL 20 - General-Use Snap Switches Current Edition, Including All Revisions.

I. UL 498 - Attachment Plugs and Receptacles Current Edition, Including All Revisions.

J. UL 514D - Cover Plates for Flush-Mounted Wiring Devices Current Edition, Including All Revisions.

K. UL 943 - Ground-Fault Circuit-Interrupters Current Edition, Including All Revisions.

L. UL 1472 - Solid-State Dimming Controls Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Products: Listed, classified, and labeled as suitable for the purpose intended.

1.07 DELIVERY, STORAGE, AND PROTECTION

A. Store in a clean, dry space in original manufacturer's packaging until ready for installation.

PART 2 PRODUCTS

2.01 WIRING DEVICE APPLICATIONS

A. Provide wiring devices suitable for intended use and with ratings adequate for load served.

B. For single receptacles installed on an individual branch circuit, provide receptacle with ampere rating not less than that of the branch circuit.

C. Provide weather resistant GFCI receptacles with specified weatherproof covers for receptacles installed outdoors or in damp or wet locations.

D. Provide GFCI protection for the following 15A and 20A, 125V receptacles:
   1. Receptacles installed in other than dwelling units at the following locations:
      a. Bathrooms.
      b. Kitchens.
      c. Rooftops.
      d. Outdoors.
      e. Receptacles installed within 6 feet (1.8 m) of sinks.
      f. Indoor wet locations.
      g. Locker rooms with showering facilities.
      h. Serving electric drinking fountains.
      i. Serving vending machines manufactured prior to 01/01/2005 (not having GFCI interrupter as integral part of the attachment plug).

2.02 WIRING DEVICE FINISHES

A. Provide wiring device finishes as described below unless otherwise indicated.

B. Wiring Devices Connected to Emergency Power: Red withengraved "Emergency" wall plate as specified for normal power devices.

C. Flush Poke-Through Service Fittings: Color and material of devices, plates, covers, etc. shall be as required by the architect.

2.03 WALL SWITCHES

A. Manufacturers:
   1. Hubbell Incorporated; _____: www.hubbell.com/#sle.
   2. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
   3. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Wall Switches - General Requirements: AC only, quiet operating, general-use snap switches with silver alloy contacts, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 20 and where applicable, FS W-S-896; types as indicated on the drawings.
   1. Wiring Provisions: Terminal screws for side wiring and screw actuated binding clamp for back wiring with separate ground terminal screw.

2.04 WALL DIMMERS

A. Manufacturers:
   1. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
   2. Lutron Electronics Company, Inc; Maestro Series: www.lutron.com/#sle.
   3. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Wall Dimmers - General Requirements: Solid-state with continuous full-range even control following square law dimming curve, integral radio frequency interference filtering, power failure preset memory, air gap switch accessible without removing wall plate, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 1472; types and ratings suitable for load controlled as indicated on the drawings.

2.05 RECEPTACLES

A. Manufacturers:
   1. Hubbell Incorporated; _____: www.hubbell.com/#sle.
   2. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
   3. Lutron Electronics Company, Inc; Designer Style: www.lutron.com/#sle.
   4. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Receptacles - General Requirements: Self-grounding, complying with NEMA WD 1 and NEMA WD 6, and listed as complying with UL 498, and where applicable, FS W-C-596; types as indicated on the drawings.

1. Wiring Provisions: Terminal screws for side wiring or screw actuated binding clamp for back wiring with separate ground terminal screw.
2. NEMA configurations specified are according to NEMA WD 6.

C. Convenience Receptacles:
1. Standard Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R; single or duplex as indicated on the drawings.
2. Weather Resistant Convenience Receptacles: Industrial specification grade, 20A, 125V, NEMA 5-20R, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations; single or duplex as indicated on the drawings.

D. GFCI Receptacles:
1. GFCI Receptacles - General Requirements: Self-testing, with feed-through protection and light to indicate ground fault tripped condition and loss of protection; listed as complying with UL 943, class A.
2. Standard GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style.
3. Weather Resistant GFCI Receptacles: Industrial specification grade, duplex, 20A, 125V, NEMA 5-20R, rectangular decorator style, listed and labeled as weather resistant type complying with UL 498 Supplement SE suitable for installation in damp or wet locations.

2.06 WALL PLATES

A. Manufacturers:
1. Hubbell Incorporated; _____: www.hubbell-wiring.com/#sle.
2. Leviton Manufacturing Company, Inc; _____: www.leviton.com/#sle.
3. Lutron Electronics Company, Inc; _____: www.lutron.com/#sle.
4. Pass & Seymour, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Wall Plates: Comply with UL 514D.
1. Configuration: One piece cover as required for quantity and types of corresponding wiring devices.
2. Size: Standard; _____.
3. Screws: Metal with slotted heads finished to match wall plate finish.

2.07 POKE-THROUGH ASSEMBLIES

A. Manufacturers:
1. Hubbell Incorporated; _____: www.hubbell.com/#sle.
2. Thomas & Betts Corporation; _____: www.tnb.com/#sle.
3. Wiremold, a brand of Legrand North America, Inc; _____: www.legrand.us/#sle.

B. Description: Assembly comprising floor service fitting, poke-through component, fire stops and smoke barriers, and junction box for conduit termination; fire rating listed to match fire rating of floor and suitable for floor thickness where installed.

C. Above-Floor Service Fittings:
1. Single Service Pedestal Convenience Receptacles:
a. Configuration: One standard convenience duplex receptacle.
2. Single Service Pedestal Communications Outlets:
a. Configuration: One 1 inch bushed opening.
b. Voice and Data Jacks: Provided by others.
3. Single Service Pedestal Furniture Feed:
a. Configuration: One 3/4 inch knockout.
4. Dual Service Pedestal Combination Outlets:
a. Configuration:
1) Power: One standard convenience duplex receptacle.
2) Communications: One 1 inch bushed opening.
3) Voice and Data Jacks: Provided by others.
b. Provide barrier to separate line and low voltage compartments.

D. Flush Floor Service Fittings:
   1. Single Service Flush Convenience Receptacles:
      a. Configuration: One standard convenience duplex receptacle(s) with duplex flap opening(s).
   2. Single Service Flush Communications Outlets:
      a. Configuration: _____.
      b. Voice and Data Jacks: Provided by others.
   3. Single Service Flush Furniture Feed:
      a. Configuration: One 2 inch by 1-1/4 inch combination threaded opening(s).
   4. Dual Service Flush Combination Outlets:
      a. Cover: Hinged door(s).
      b. Configuration:
         1) Power: One standard convenience duplex receptacle(s).
         2) Communications: _____.
         3) Voice and Data Jacks: Provided by others.
   5. Dual Service Flush Furniture Feed:
      a. Configuration:
         1) Power: One 3/4 inch threaded opening(s).
         2) Communications: Two 1/2 inch threaded opening(s).
   6. Accessories:
      a. Closure Plugs: Size and fire rating as required to seal unused core hole and maintain fire rating of floor.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that outlet boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate devices and conductors in accordance with NFPA 70.

C. Verify that wall openings are neatly cut and will be completely covered by wall plates.

D. Verify that final surface finishes are complete, including painting.

E. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.

F. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from outlet boxes.

3.03 INSTALLATION

A. Perform work in accordance with NECA 1 (general workmanship) and, where applicable, NECA 130, including mounting heights specified in those standards unless otherwise indicated.

B. Coordinate locations of outlet boxes provided under Section 260533.16 as required for installation of wiring devices provided under this section.

C. Install wiring devices in accordance with manufacturer's instructions.

D. Install permanent barrier between ganged wiring devices when voltage between adjacent devices exceeds 300 V.

E. Where required, connect wiring devices using pigtails not less than 6 inches long. Do not connect more than one conductor to wiring device terminals.

F. Connect wiring devices by wrapping conductor clockwise 3/4 turn around screw terminal and tightening to proper torque specified by the manufacturer. Where present, do not use push-in pressure terminals that do not rely on screw-actuated binding.

G. Unless otherwise indicated, connect wiring device grounding terminal to branch circuit equipment grounding conductor and to outlet box with bonding jumper.

H. Install wiring devices plumb and level with mounting yoke held rigidly in place.

I. Install wall switches with OFF position down.

J. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.

K. Do not share neutral conductor on branch circuits utilizing wall dimmers.

L. Install vertically mounted receptacles with grounding pole on top and horizontally mounted receptacles with grounding pole on left.

M. Install wall plates to fit completely flush to wall with no gaps and rough opening completely covered without strain on wall plate. Repair or reinstall improperly installed outlet boxes or improperly sized rough openings. Do not use oversized wall plates in lieu of meeting this requirement.

N. Install blank wall plates on junction boxes and on outlet boxes with no wiring devices installed or designated for future use.

O. Install poke-through closure plugs in each unused core holes to maintain fire rating of floor.

3.04 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect each wiring device for damage and defects.

C. Operate each wall switch, wall dimmer, and fan speed controller with circuit energized to verify proper operation.

D. Test each receptacle to verify operation and proper polarity.

E. Test each GFCI receptacle for proper tripping operation according to manufacturer's instructions.

F. Correct wiring deficiencies and replace damaged or defective wiring devices.

3.05 ADJUSTING

A. Adjust devices and wall plates to be flush and level.

3.06 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

END OF SECTION 262726

SECTION 262816.16
ENCLOSED SWITCHES

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Enclosed safety switches.

1.02 RELATED REQUIREMENTS

A. Section 260526 - Grounding and Bonding for Electrical Systems.

B. Section 260529 - Hangers and Supports for Electrical Systems.

1.03 REFERENCE STANDARDS

A. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

B. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum) 2020.

C. NEMA KS 1 - Heavy Duty Enclosed and Dead-Front Switches (600 Volts Maximum) 2013.

D. NETA ATS - Standard For Acceptance Testing Specifications For Electrical Power Equipment And Systems 2021.

E. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. UL 50 - Enclosures for Electrical Equipment, Non-Environmental Considerations Current Edition, Including All Revisions.

G. UL 50E - Enclosures for Electrical Equipment, Environmental Considerations Current Edition, Including All Revisions.

H. UL 98 - Enclosed and Dead-Front Switches Current Edition, Including All Revisions.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate the work with other trades. Avoid placement of ductwork, piping, equipment, or other potential obstructions within the dedicated equipment spaces and within working clearances for electrical equipment required by NFPA 70.
   2. Coordinate arrangement of electrical equipment with the dimensions and clearance requirements of the actual equipment to be installed.
   3. Verify with manufacturer that conductor terminations are suitable for use with the conductors to be installed.
   4. Notify Architect of any conflicts with or deviations from Contract Documents. Obtain direction before proceeding with work.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for enclosed switches and other installed components and accessories.

C. Shop Drawings: Indicate outline and support point dimensions, voltage and current ratings, short circuit current ratings, conduit entry locations, conductor terminal information, and installed features and accessories.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store in a clean, dry space having uniform temperature to prevent condensation. Maintain factory wrapping or provide an additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.

B. Handle carefully in accordance with manufacturer's written instructions to avoid damage to enclosed switch internal components, enclosure, and finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

2.02 ENCLOSED SAFETY SWITCHES

A. Description: Quick-make, quick-break enclosed safety switches listed and labeled as complying with UL 98; heavy duty; ratings, configurations, and features as indicated on the drawings.

B. Provide products listed, classified, and labeled as suitable for the purpose intended.

C. Unless otherwise indicated, provide products suitable for continuous operation under the following service conditions:
   1. Altitude: Less than 6,600 feet.
   2. Ambient Temperature: Between -22 degrees F and 104 degrees F.

D. Horsepower Rating: Suitable for connected load.

E. Voltage Rating: Suitable for circuit voltage.

F. Short Circuit Current Rating:

G. Provide with switch blade contact position that is visible when the cover is open.

H. Conductor Terminations: Suitable for use with the conductors to be installed.

I. Provide solidly bonded equipment ground bus in each enclosed safety switch, with a suitable lug for terminating each equipment grounding conductor.

J. Enclosures: Comply with NEMA 250, and list and label as complying with UL 50 and UL 50E.
   1. Environment Type per NEMA 250: Unless otherwise indicated, as specified for the following installation locations:

K. Provide safety interlock to prevent opening the cover with the switch in the ON position with capability of overriding interlock for testing purposes.

L. Heavy Duty Switches:
   1. Comply with NEMA KS 1.
   2. Conductor Terminations:
      a. Lug Material: Aluminum, suitable for terminating aluminum or copper conductors.
   3. Provide externally operable handle with means for locking in the OFF position, capable of accepting three padlocks.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that the ratings of the enclosed switches are consistent with the indicated requirements.

C. Verify that mounting surfaces are ready to receive enclosed safety switches.

D. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Arrange equipment to provide minimum clearances in accordance with manufacturer's instructions and NFPA 70.

D. Provide required support and attachment in accordance with Section 260529.

E. Install enclosed switches plumb.

F. Except where indicated to be mounted adjacent to the equipment they supply, mount enclosed switches such that the highest position of the operating handle does not exceed 79 inches above the floor or working platform.

G. Provide grounding and bonding in accordance with Section 260526.

3.03 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.5.1.1.

D. Correct deficiencies and replace damaged or defective enclosed safety switches or associated components.

3.04 ADJUSTING

A. Adjust tightness of mechanical and electrical connections to manufacturer's recommended torque settings. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.05 CLEANING

A. Clean dirt and debris from switch enclosures and components according to manufacturer's instructions.

B. Repair scratched or marred exterior surfaces to match original factory finish.

END OF SECTION 262816.16

SECTION 26 51 00 (A) – ARCHITECTURAL LIGHTING FIXTURE SPECIFICATIONS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver, and install all work of this section as shown on the drawings, as specified herein, and/or as required by job conditions. The work shall include but not be limited to the following:

1. Complete shop fabrication
2. Delivery to job site
3. Installation at designated location, and controls as noted
4. Lamping and lamps
5. Lamp focusing
6. Cleaning and protection

1.2 DESCRIPTION OF WORK

A. Furnish and install a lighting fixture of the type indicated by letter at each location shown on the drawings.

B. All materials, accessories, and any other equipment necessary for the complete and proper installation of all lighting fixtures included in this Contract shall be furnished by the Contractor.

C. Conformance: Fixtures shall be manufactured in strict accordance with the Contract Drawings and Specifications.

D. Codes: Materials and installation shall be in accordance with the latest revision of the National Electrical Code and any applicable Federal, State, and local codes and regulations.

E. U.L. Listing: All fixtures shall be manufactured in strict accordance with the appropriate and current requirements of the Underwriters' Laboratories, Inc. "Standards for Safety," and others as they may be applicable. A UL listing shall be provided for each fixture type, and the appropriate label or labels shall be affixed to each fixture in a position concealing it from normal view.

F. Specifications and scale drawings are intended to convey the salient features, function and character of the fixtures only, and do not undertake to illustrate or set forth every item or detail necessary for the work.

G. Minor details, not usually indicated on the drawings nor specified, but that are necessary for the proper execution and completion of the fixtures, shall be included, the same as if they were herein specified or indicated on the drawings.

H. Omissions: The Owner shall not be held responsible for the omission or absence of any detail, construction feature, etc. which may be required in the production of the fixtures. The responsibility of accurately fabricating the fixtures to the fulfillment of this specification rests with the Contractor.

I. The Electrical Contractor shall be responsible for:
1. Ordering the lighting equipment in advance so as not to delay the construction of the project. Most of the fixtures listed in this schedule have a 4 - 6 week delivery time, some lead times may be even longer.
2. Coordinating recessed luminaires with the ceilings into which they are to be installed, regardless of what the manufacturer's catalog numbers specifies, i.e. voltage, fixture/ceiling system compatibility, static or air handling, Chicago plenum rated.
3. Coordinating with Electrical and HVAC Engineer to purchase luminaires with correct primary voltage designation.
4. Cooperating in the coordination and scheduling of the work in this section with the work of other sections so as not to delay job progress.

J. The General Contractor shall be responsible for:
1. Verifying, by measurements of the job site, all dimensions affected by the work. Field dimensions which are at variance with those on the approved shop drawing shall be brought to the attention of the Architect. The decision regarding corrective measures shall be obtained before the start of fabrication of items affected.
2. Examining all surfaces and conditions to which work is to be attached or applied and notify the Architect in writing if any conditions or surfaces exist which the contractor feels detrimental to the proper and expeditious installation of his work. Starting on the work shall imply acceptance of the surfaces and conditions to perform the work as specified.
3. Studying the contract drawings and specifications with regard to the work shown and as required under this section so as to ensure its completeness.

1.3 SUBMITTALS

A. Product Data: For each type of lighting fixture scheduled, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
1. Physical description of fixture, including dimensions.
2. Emergency lighting unit battery and charger for verification by Electrical Engineer.
3. Lamps.
4. Low voltage transformers.
5. Luminaire dimensions, effective projected area, details of attaching luminaires, accessories, and installation and construction details.
6.

B. Shop Drawings shall clearly indicate the contract drawing number of fixture details used as reference in the development of the shop drawings, and the names of the job, Architect and Lighting Consultant.

C. The Contractor shall coordinate all his lighting fixture drawings with the drawings and details of the Architectural, Structural, Electrical, Mechanical, and other related trades to assure a perfect and efficient installation.

D. No variation from the general arrangement and details indicated on the drawings shall be made on the shop drawings unless required to suit the actual conditions on the premises, and then only with the written approval of the Architect.

E. Catalog cuts lacking sufficient detail to indicate compliance with contract documents will not be acceptable.

F. Timely submission: Shop drawings for all lighting fixtures shall be received no later than sixty (60) days after award of Contract.

G. Review of shop drawings or samples does not waive contract requirements.

H. Photometric Data: Where indicated on the fixture schedule and contract drawings, supply complete photometric data for the fixture, including optical performance rendered by independent testing laboratory, developed according to methods of U.S.A. Illuminating Engineering Society. For down and semi-down lights used for general illumination:
   1. Coefficients of utilization.
   2. Visual Comfort Probability data, rooms with reflectances of 80 percent (ceiling), 50 percent (walls), and 20 percent (floor), including a (20 ft. by 20 ft.) room with 10 ft. ceiling and luminaires lengthwise.
   3. Candlepower data, presented graphically and numerically, in 5 degree increments (5 degree, 10 degree, 15 degree, etc.). Data developed for up and down quadrants normal, parallel, and at 22-1/2°, 45°, 167-1/2° to lamps if light output is asymmetric.
   4. Zonal lumens stated numerically in 10 degree increments (5 degree, 15 degree, etc.) as above.

I. Supply photometric data for any fixture offered in substitution for a specified fixture.

1.4 SHOP DRAWINGS

A. Submit shop drawings to the Architect for review in accordance with the requirements of the Contract Documents.

B. Shop drawings shall include details and cuts of each fixture type scheduled herein, and shall include for each type the following information.
   1. Type, lamping, size (dimensions), material exterior and interior, power supply type (where applicable), lenses, baffles, finishes, and means and methods of attachment (mounting).
   2. Include photometric data for each fixture.
   3.

C. Submit reflected ceiling plans, sections and details so as to locate and define each fixture type and its location.

D. Clearly indicate work to be provided by other trade subcontractors and coordinate accordingly. Subcontractor shall show light fixtures correctly scaled and detailed, on subcontractor shop drawings.

E. Control Zone Diagrams: Schematic control zone diagrams and zoning schedules.

F. To accommodate the seismic requirements, indicate supplementary spring type supports from the buildings structure for all fixtures 2-foot square in area and above.

G. Electrical Contractor to submit any proposed fixture substitutions, along with add or deduct prices for such substitutions, fixture cuts, descriptions and photometrics at the time of base bid only.

H. Custom fixture designs and modifications to standard products as called out in the light fixture schedule, require photometric submission, shop drawings, samples and review for approval. It is the General Contractors responsibility to coordinate these items with adequate lead time to meet the project schedule and to allow for possible modifications in design if required.

I. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
   1. Suspended ceiling components.
   2. Structural members to which lighting-fixture suspension systems will be attached.
   3. Other items in finished ceiling, including the following:
      a. Air outlets and inlets
      b. Speakers
      c. Sprinklers
      d. Access panels
   4. Perimeter moldings.

1.5 SAMPLES

A. After shop drawing approval, and prior to release for manufacturing, the Contractor shall furnish one sample of each fixture on the fixture schedule and contract drawings for which sample requirement is noted.

B. Shipping: The samples shall be complete with specified lamp(s) ready for hanging, energizing, and examining, and shall be shipped, prepaid by Contractor, to the Lighting Consultant, or as otherwise advised.

C. Sufficient time shall be allowed for thorough examination of the samples by the Lighting Consultant.

D. Samples are not returnable, nor included in quantities listed for a project.

E. Samples must be actual working unit of materials to be supplied.

F. Samples must have 120V power supply or transformer and 6’-0”long cord with NEMA5-15P plug.

1.6 QUALITY ASSURANCE

A. Qualifications

1. The Manufacturer shall be a specialty lighting firm who has been in the business of designing and manufacturing specialty lighting fixtures for not less than ten (10) years.
2. The Installer shall be a firm having trained personnel who have been in the business of installing specialty lighting for not less than seven (7) years and shall provide a full time field superintendent who shall be a representative of the installer during the installation and testing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name, and manufacturer's name. Delivered material shall be identical to the reviewed submittals.

B. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged, or otherwise not suitable for installation from the job site and replace with acceptable materials.

C. The fixtures shall be delivered to the job site fully fabricated and assembled and ready for installation.

D. For luminaires incorporating Alzak cones or reflector/cones for protection pending completion of the installation: these components shall be supplied bulk packed in cartons separate from the luminaires. Unit packaging of cones or reflector/cones with luminaires is not acceptable.

1.8 WARRANTY

A. Installation checkout: Upon completion of initial system installation and fixture cleaning, the trade subcontractor shall notify the Architect that the system has been completed. At this time, the subcontractor shall verify that the installation has been done in full accordance with the design and specification and is in full and complete working order.

B. The Contractor shall warrant the fixture, its finishes, and all of its component parts, to be free from defects for a period of one year from date of acceptance if operated within rated voltage range. Replacement of faulty materials and the cost of labor required to make the replacement shall be the responsibility of the Contractor.

C. All LED Manufacturers shall provide a minimum five year warranty on LED components. Along with the standard warranty, if extreme color shift occurs (+1,000 Kelvin) or extreme color inconsistency develops (+/- 500 Kelvin) within the warrantee period, this shall be considered a failure and the Manufacturer shall be responsible for replacing all affected fixtures free of charge.

PART 2 - PRODUCTS

2.1 FIXTURE CONSTRUCTION (GENERAL)

A. All materials, accessories, and other related fixture parts shall be new and free from defects which in any manner may impair their character, appearance, strength, durability and function, and be effectively protected from any damage or injury from the time of fabrication to the time of delivery and until final acceptance of the work.

B. Enclosures: Fabricate fixture enclosures with a minimum of #20 gauge (0.0359 inch) thick cold rolled sheet steel. Enclosures may be constructed of other metals, provided they are equivalent in mechanical strength and acceptable for the purpose. Fabricate lighting fixtures to be finished in vitreous porcelain enamel from a minimum of #20 gauge enameling steel.

C. Sheet Metal Work: All sheet metal work shall be free from tool marks and dents, and shall have accurate angles bent as sharp as compatible with the gauges of the required metal. All inter-sections and joints shall be formed true of adequate strength and structural rigidity to prevent any distortion after assembly.

D. Housings shall be so constructed that all electrical components are easily accessible and replaceable without removing fixtures from their mountings, or disassembly of adjacent construction.

E. Castings: All castings shall be exact replicas of the approved patterns and shall be free of sand pits, blemishes, scales and rust, and shall be smoothly finished. Tolerance shall be provided for any shrinkage of the metal castings in order that the finished castings will accurately fit in their designated locations.

F. All fixtures shall be completely wired at the factory.

G. Mounting Frames and Rings: If ceiling system requires, each recessed and semi-recessed fixture shall be furnished with a mounting frame or ring compatible with the ceiling in which they are to be installed. The frames and rings shall be one piece or constructed with electrically-welded butt joints, and of sufficient size and strength to sustain the weight of the fixture.

H. Light leaks between ceiling trims of recessed lighting equipment and the ceilings will not be tolerated. If fixture is used in partially transparent ceiling, light leaks above the ceiling line will not be tolerated.

I. Yokes, brackets and supplementary supporting members needed to mount lighting fixtures to carrier channels or other suitable ceiling members shall be furnished and installed by the Contractor.

J. Hardware: For steel and aluminum fixtures, all screws, bolts, nuts and other fastening and latching hardware shall be cadmium or equivalent plated. For stainless steel fixtures, all hardware shall be stainless steel. For bronze fixtures, all hardware shall be stainless steel or bronze.

K. Temperature: All fixtures and power supplies must operate within the temperature limits of their design and as specified by Underwriters' Laboratories, Inc. in the applications and mounting conditions herein specified.

L. Adjustable Angle Fixtures: Each lighting fixture which has a beam angle adjustment shall have reliable angle locking devices.

M. Metal Parts: Free of burrs and sharp corners and edges.

N. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.

O. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit access without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during maintenance and when secured in operating position. Doors shall be removable for cleaning or replacing lenses.

P. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

Q. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.

R. KNL Recommends contractor to provide an additional one percent of each fixture type, which shall constitute the Owner's initial attic stock. Contractor shall coordinate exact percentage of attic stock and storage location with Owner.

2.2 REFLECTORS AND TRIMS

A. Installation: Reflectors, reflector cones and visible trim of all lighting fixtures shall not be installed until completion of plastering, ceiling tile work, painting and general clean-up. They shall be carefully handled to avoid scratching or finger-printing and shall be, at the time of acceptance by the Owner, completely clean.

B. All Alzak parabolic cones shall be guaranteed against discoloration for a minimum of ten years, and, in the event of premature discoloration, shall be replaced by the Manufacturer, including materials and the cost of labor.

C. Aluminum reflectors shall be finished specular, semi-specular, or diffuse as required and shall meet or exceed Alzak specifications.

2.3 LENSES

A. Plastic for lenses and diffusers shall be formed of colorless 100 percent virgin acrylic. The quality of the raw material must exceed IES, SPI, and NEMA Specifications by at least 100 percent which, as a minimum standard, shall not exceed a yellowness factor of 3 after 2,000 hours of exposure in the Fade-meter or as tested by an independent test laboratory. Acrylic

plastic lenses and diffusers shall be properly cast, molded or extruded as specified, and shall remain free of any dimensional instability, discoloration, embrittlement, or loss of light transmittance for at least 15 years.

B. Glass used for lenses, refractors, and diffusers in incandescent lighting fixtures shall be tempered for high impact and heat resistance. The glass shall be crystal clear in quality with a transmittance of not less than 88 percent. For exterior fixtures use tempered Borosilicate glass, tempered Corning #7740, or as acceptable. For fixtures directly exposed to the elements and aimed above the horizontal with a radiant energy of 4.16 watts per square inch or greater, use Vycor glass.

C. Where optical lenses are used, they shall be free from spherical and chromatic aberrations and other imperfections which may hinder the functional performance of the lenses.

D. Mechanical: All lenses, louvers, or other light diffusing elements shall be removable, but positively held so that hinging or other normal motion will not cause them to drop out.

E. Cleaning: All lenses shall be turned over to the Owner clean and free of dust.

2.4 FINISHES

A. Painted Surfaces: Synthetic enamel, with acrylic, alkyd, epoxy, polyester, or polyurethane base, light stabilized, baked on at 350 degree Fahrenheit minimum, catalytically or photochemically polymerized after application.

B. White finishes: minimum of 85 percent reflectance.

C. Ceiling opening frames shall either be manufactured of non-ferrous metal, or be suitably rustproofed after fabrication.

D. Selection: Unless otherwise noted, finishes shall be as selected by the Architect.

E. Undercoat: Except for stainless steel, ferrous metal surfaces shall have a five stage phosphate treatment or other acceptable base bonding treatment before final painting and after fabrication.

F. Unpainted non-reflecting surfaces shall be satin finished and coated with a baked-on clear lacquer to preserve the surface. Where aluminum surfaces are treated with an anodic process, the clear lacquer coating may be omitted.

G. Unpainted Aluminum Surfaces: Finish interior aluminum trims with an anodized coating of not less than 7 mg. per square inch, of a color and surface finish as selected by the Architect. Finish exterior aluminum and aluminum trims with an anodized coating of not less than 35 mg. per square inch, of a color and surface finish as selected by the Architect.

H. Porcelain Enamel Surfaces: Apply porcelain finishes smoothly. Finish shall be not less than 7.5 mils thick of non-yellowing, white, vitreous porcelain enamel with a reflectance of not less than 85 percent.

2.5 LED FIXTURES

A. ANSI Standards: LED fixtures shall meet ANSI Standards C78.377-2008, Specifications for the Chromaticity of Solid State Lighting Products, and C82.37-2011, Harmonic Emission Limits – Related Power Quality Requirements for Lighting.

B. IES LM-79 and LM-80: LED Fixtures shall be LM-79-08, Electrical and Photometric Testing of Solid-State Lighting Devices, and LM-80-08, Measuring Lumen Depreciation of LED Light Sources, tested and approved.

C. NEMA: LED Diodes and Electronic Drivers shall comply with NEMA guideline SSL-3-2010, High-Power White LED Binning for General Illumination, and SSL-1-2010, Electronic Drivers for LED Devices, Arrays, or Systems.

D. UL Listing: LED fixtures and all components shall be UL Listed under UL 8750 as well as any other applicable UL listings required.

E. Rated Life: LED Fixtures shall be rated for 50,000 hour minimum performance on all LED diode components.

F. Color Rendering Index (CRI): All LED fixtures shall have a CRI of 80 or higher.

G. Color Consistency: All LEDs shall be matched to the highest level of color consistency (+/- 100 Kelvin).

H. LED Components: LED boards, drivers, modules and light engines shall be accessible and replaceable in the field.

2.6 BASE BID MANUFACTURERS (ALTERNATES)

A. Base bid for lighting fixtures of manufacturers listed.

B. Alternate manufacturers: Identification by means of manufacturers' names and catalog numbers is to establish basic features and performance standards. Any substitutions must meet or exceed these standards.
   1. Where a product is specified to be by a designated manufacturer with "or equal by" an alternate manufacturer, the alternate manufacturer's product must meet the specifications given for the designated product. If the alternate manufacturer listed does not have a product that will meet the specification, then his product will not be acceptable.
   2. Where a product is specified to be by a designated manufacturer with "or equal by" an alternate manufacturer, the design, including space allocation, has been performed around the designated manufacturer. It is the Contractor's responsibility to verify that the alternate manufacturer's equipment is complete with the same features, options, and photometric performance, as the designated manufacturer's equipment, and that it will fit in the available space (wall, plenum, cove, etc.).

C. Qualifications: Within 60 days of placement of order, Contractor must furnish independent photometric tests and samples for all alternative fixtures. If fixture fails to comply with

specification requirements at that time, Contractor will furnish acceptable fixture at no additional cost to the Owner, and with no delay to the project.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Installation: Do not scale electrical drawings for exact location of the lighting fixtures. In general, the architectural reflected ceiling plans indicate the proper locations of lighting fixtures.

B. Appurtenances: Install each fixture properly and safely. Furnish and erect hangers, rods, mounting brackets, supports, frames, and other equipment required.

C. Coordination: Furnish lighting fixtures complete with appurtenances required for the proper, safe and distortion-free installation in the various surfaces in which they appear. Determine surface types from the Architectural drawings.

D. Instructions: Each lighting fixture shall be packaged with complete instructions and illustrations showing how to install. Install lighting fixtures in strict conformance with manufacturer's recommendations and instructions.

E. Rigidly align continuous rows of lighting fixtures for true in-line appearance.

F. Do not install fixtures and/or parts such as finishing plates and trims for recessed fixtures until all plastering and painting that may mar fixtures' finish has been completed. Protective plastic sheeting provided by lighting fixture manufacturer shall not be removed until all painting and clean-up has been completed.

G. Mechanical Rooms: Lighting fixture locations in mechanical and electrical equipment rooms are approximate. Coordinate mounting height and location of lighting fixtures to clear mechanical, electrical and plumbing equipment and to adequately illuminate meters, gauges and equipment.

H. Support all lighting fixtures independently of duct work or piping.

I. Concealment: Whenever a fixture or its hanger canopy is applied to a surface mounted outlet box, a finishing ring shall be utilized to conceal the outlet box.

J. Splices in internal wiring shall be made with approved insulated "wire nut" type mechanical connectors, suitable for the temperature and voltage conditions to which they are subjected.

K. All wire utilized for connections to or between individual fixtures and fixture auxiliaries (i.e., wires which do not constitute "through circuit" wiring) shall be suitable for temperature, current, and voltage conditions to which it is subjected.

L. Install reflector cones, baffles, aperture plates, light controlling element for air handling fixtures, and decorative elements after completion of ceiling tiles, painting and general cleanup.

M. Replace blemished, damaged or unsatisfactory fixtures as directed.

N. Similar luminaire types must be supplied by the same manufacturer to assure matching cone colors and trims in their respective categories.

O. The Electrical Contractor is responsible for coordinating recessed luminaires and the ceilings into which they are to be installed, regardless of the manufacturers' catalog numbers specified.

P. It is the General, Electrical, and HVAC Contractors responsibility to cross reference the lighting, HVAC, and sprinkler plans to ensure that there are no conflicts. Lighting fixture locations take precedence over duct work and sprinkler locations. Any conflicts should be reported to the Architect. Exact locations of diffusers and sprinkler heads should be located in a symmetrical pattern in line with lighting fixtures.

Q. Manufacturer shall supply written instruction for the installation of all fixtures including custom designs and special modifications affecting installation.

3.2 AIMING AND ADJUSTMENT

A. All adjustable lighting units shall be aimed, focused, locked, etc., by the Subcontractor under the supervision of the Lighting Consultant. The Lighting Consultant shall indicate the number of crews (foreman and apprentice) required. All aiming and adjusting shall be carried out after the entire installation is complete. All ladders, scaffolds, etc. required shall be furnished by the Contractor at the direction of the Lighting Consultant. As aiming and adjusting is completed, locking set-screws and bolts and nuts shall be tightened securely.

B. Night Work: Where possible, units shall be focused during the normal working day. However, where daylight interferes with seeing, adjustment shall be accomplished at night.

3.3 CLEANUP

A. At the time of final acceptance by the Owner, all lighting fixtures shall have been thoroughly cleaned with materials and methods recommended by the manufacturers, all broken parts shall have been replaced, and all lamps shall be operative.

3.4 MAINTENANCE

A. The Contractor shall be responsible for obtaining from his supplying lighting manufacturers, for each type of lighting fixture, a recommended maintenance manual including:
   1. Tools required.
   2. Types of cleaners to be used.
   3. Replacement parts identification list.
   4. Final, as-built shop drawings.

B. The Contractor shall be responsible for ordering attic stock for ownership / end user.

GENERAL FIXTURE SCHEDULE NOTES:

A. Any discrepancies between the catalog number, fixture description, remarks, lamp and supply voltage should be brought to the attention of the lighting consultant prior to the release of a purchase order.
B. "Continuous", when noted, requires complete lengths with no gaps between fixture housings. Submit complete shop drawings with field layouts for all fixtures, indicating power entries, joiner and connection locations, supports, and lamp locations for continuous runs.
C. Catalog cuts or "Series" numbers, are intended to provide assistance in establishing general type or category of lighting fixtures only. Contractor shall provide a fixture that meets the written performance and description.
D. When custom sketches or drawings are part of the contract documents, bring any discrepancies between the drawing and specifications to the attention of the Architect before submitting bids.
E. "Remote Drivers/Transformers" when noted, require the fixture manufacturer (or E.C.) to supply low voltage drivers/transformer(s) with enclosures and to coordinate size and quantity with the Electrical Contractor (or manufacturer). Contractor to provide fuse for secondary wiring. Drivers/Transformers to be in a well ventilated and accessible remote location as selected by architect/ interior designer/EE and coordinated with the contractor. Contractor to coordinate mounting details and electrical connections, advise manufacturer of lead lengths, quantity of drivers/transformers and verify that installation complies with national and local codes. Contractor to follow manufacturer recommendations to determine required wire size required between fixture and transformer to assure that voltage drop does not exceed 5%.
F. "Custom Color", when noted, requires the Contractor to coordinate and provide special colors. Contractor to verify all occurrences with the Architect, and note identical fixtures types may be installed at different architectural ceiling or wall finishes, thus separate colors for each material may be required. Include within cost additional set-up charges for "custom colors".
G. For all LED and Fluorescent fixtures designated on electrical drawings with the suffix “EM” or “E”, refer to both the description in the fixture schedule and the E-series drawings to determine whether to provide Emergency Battery Packs or whether fixtures are connected to a central inverter of generator powering EM circuits. EE to confirm emergency requirements.
H. Focusing and aiming is required for all adjustable lighting fixtures. Contractor to provide allowance for AFTER HOURS manpower, scaffolding, and tools to adjust, aim, or install fixtures and accessories per the Lighting Consultants direction. Focusing can only occur after the Contractor has verified installation and confirmed operation of all fixtures and control systems. Installation of specific architectural ornament or art intended to be illuminated must be in place prior to the focus. The “initial” aiming angles must be approved by the client and additional re-aiming may be required. The Contractor is to provide manhour allowance for re-aiming and installation of additional accessories, as needed.
I. Submit shop drawings to the Architect and Lighting Consultant for review in accordance with the requirements of the above descriptions. Shop drawings shall include details and cuts of each fixture type, and shall include information on lamping, housing size and material, driver or transformer type (where applicable), lenses, baffles, finishes, and means and methods of attachment. Do not obtain fixtures without approval.

TYPE KA		
Amerlux GRUV2.5-GRID-A16-PL-5-359-HW-120/277-4'-0"-IND-0-10V ***EQUAL ALTERNATE: Focal Point Seem 2 LED Recessed Series***	DESCRIPTION	Linear LED slot
	MOUNTING	Recessed in ACT
	LIGHT SOURCE	5W/ft, 500 delivered lumens/ft, 90 CRI, 3500K LEDs, by manufacturer
	CONTROL	Integral 0-10V dimming driver
	HOUSING	Extruded aluminum, nominally 2-11/16" W x 3-7/8" H x 4'-0" L; lengths to be confirmed with architectural drawings
	TRIM/APERTURE	2-1/2" W aperture
	FINISH	White finish to be verified by architect.
	LENS/ACCESSORIES	Snap-in high efficiency performance lens, extruded acrylic
	LOCATION	Circulation, typical throughout
	VOLTAGE	By EE
	INSTALLATION NOTES	1. Contractor to verify fixture mounting compatibility with ceiling type/ceiling system and thickness, manufacturer's installation instructions, and field conditions. 2. Contractor to refer to manufacturer's instructions to ensure an acceptable installation detail. 3. Contractor to coordinate all fixture run length configurations with architectural drawings and field conditions, and order as required.

	TRIM/APERTURE	N/A
	FINISH	White finish to be verified by architect
	LENS/ACCESSORIES	Newmat diffuser
	LOCATION	Waiting Room C329, Nurses' Stations
	VOLTAGE	By EE
	INSTALLATION NOTES	1. Contractor to verify fixture mounting compatibility with ceiling type and thickness, manufacturer's installation instructions, and field conditions. 2. Fixture to be installed so it shall appear flush with finished ceiling plane. Contractor to refer to manufacturer's instructions to ensure an acceptable installation detail. 3. EC/GC to order all electrical and mounting hardware as required for a complete installation. 4. Remote driver to be installed in remote, well-ventilated, and accessible location. Contractor and architect to coordinate. 5. Contractor to coordinate appropriate amount and gauge of wiring required to run from fixture to remote driver. Distance between driver and fixture must not exceed manufacturers' recommendations. Refer to manufacturer's instructions to ensure that voltage drop does not exceed 5%. 6. EC/GC to coordinate quantity and size of remote drivers.

TYPE KG	**OMITTED**

TYPE KH		
Amerlux GRUV1.5-IS-A16-PL-3-359-HW-120/277-length-CUS-PC-0-10V **SHOP DRAWINGS REQUIRED SHOWING RUN LENGTH CONFIGURATIONS AND ILLUMINATED CORNERS ***EQUAL ALTERNATE: Focal Point Seem 1 Recessed Series***	DESCRIPTION	Linear LED slot in custom configurations
	MOUNTING	Independently supported between two ceiling materials and/or ceiling and soffit face (final mounting TBD)
	LAMPING	3W/ft, 277 delivered lumens/ft, 90 CRI, 3500K by manufacturer
	CONTROL	Integral 0-10V dimming driver
	HOUSING	One piece extruded aluminum, nominally 3-1/4" H x 1-1/2" W x length, per architectural drawings.
	TRIM/APERTURE	1-5/16" W aperture
	FINISH	White finish to be verified by architect
	LENS/ACCESSORIES	Snap-in high efficiency performance lens, extruded acrylic
	LOCATION	Nurses' Station
	VOLTAGE	By EE
	INSTALLATION NOTES	1. Fixture mounted around specialty wood look metal panel/gyp ceiling. Final mount to be confirmed with architectural details. Contractor to verify fixture mounting compatibility with ceiling type/ceiling system and thickness, manufacturer's installation instructions, and field conditions. 2. Fixture shall appear flush with ceiling plane. Contractor to refer to manufacturer's instructions to ensure an acceptable installation detail. 3. Contractor to coordinate all fixture run length configurations with architectural drawings and field conditions, and order as required. 4. Fixtures to run continuously without hot spots, dark spots or light leaks. Lens lengths to be maximized. 5. Contractor shall not remove manufacturer provided spacers until fixture (and ceiling) are fully installed. Spacers maintain fixture width for lens to sit properly. 6. Manufacturer to provide system to mechanically connect fixture lengths together, ensuring continuous even runs with no gaps or light leaks. 7. Lenses at illuminated corners to be mitered with no light leaks or visible diodes.

TYPE KJ		
Signify / Day-Brite LICS100E-length-935-UNV-finish-DIM-RSHL ***EQUAL ALTERNATE: Kenall Stratalume Connects Undercabinet Series***	DESCRIPTION	Linear LED undercabinet lighting
	MOUNTING	Surface mounted to underside of upper cabinets to act as task lighting, with modular connectors.
	LAMPING	3.24W/LF, 264 delivered lumens/LF, 90 CRI, 3500K LEDs by manufacturer
	CONTROL	Integral ELV (trailing edge phase) dimming driver. Local on/off rocker switch.
	HOUSING	Extruded aluminum housing nominally 4-3/16" W x 1-3/16" H x 10", 19", or 28" L
	TRIM/APERTURE	N/A
	MATERIAL/ FINISH	Architect to verify antimicrobial white finish
	LENS/ACCESSORIES	Standard diffuser, rocker switch
	LOCATION	Med Prep, Nourishment, Radiology Break Room
	VOLTAGE	By EE
	INSTALLATION NOTES	1. Fixture to be mounted within undercabinet detail. Contractor to coordinate installation with architectural detail drawings, elevations, and sections to ensure a complete installation. 2. Contractor to verify mounting compatibility with millwork surface type and thickness, architectural drawings and details, manufacturer's installation instructions, and field conditions, and order accordingly. 3. Fixture comes in 10", 19", and 28" lengths. Fixture shall run continuously end-to-end (no dark spots) to within 6" of end of millwork / cabinetry run. 28" L fixtures to be used throughout with 10" and 19" L fixtures used only at ends. 4. Contractor to verify all fixture run lengths and configurations per architectural drawings, details, and field conditions, and order as required. 5. EC/GC to order all mounting and electrical hardware as required for a complete installation.

TYPE KK		
Signify / Day-Brite 2-FPZ-**30L**-835-2-DS-UNV-DIM ***EQUAL ALTERNATE:*** ***Liteline Forum LED Panel Light Series***	DESCRIPTION	2x2 LED troffer
	MOUNTING	Recessed in acoustic tile ceiling
	LAMPING	**23W, 3000** nominal delivered lumens, 80 CRI, 3500K, LEDs by manufacturer
	CONTROL	Integral 0-10V dimming driver
	HOUSING	Die formed galvanized steel, nominally, 23-3/4" W x 3" H x 23-3/4" L
	TRIM/APERTURE	Extruded aluminum frame
	MATERIAL/ FINISH	Architect to verify white finish
	LENS/ACCESSORIES	Flat opal lens
	LOCATION	Clean Supply, Nourishment, Equipment, Radiology Public Wait C466, Radiology Reg/Rec C467, Office C468, Radiology Break Room

Grüv 2.5" Recessed Linear

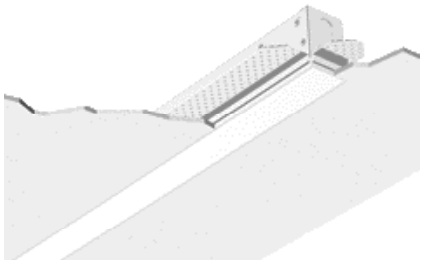
Grüv® 2.5"

Recessed Linear LED

amerlux
A Delta Group Company

Features

Small in scale, big on performance: Grüv® 2.5" LED, 5 or 10 watts/foot, delivers superior performance that makes it ideal for ambient lighting in ceiling and wall applications. At only 2.5" in width and less than 6" in depth: and providing superior visual aesthetic with snap-in hybrid micro-linear lens Grüv 2.5" LED is big enough for ambient lighting and small enough to add visual accent to your designs.



Product Overview

Type:	Recessed Direct	
Wattage:	5W/ft, 10W/ft (other Wattages available see p2)	
Color Temp:	2700K, 3000K, 3500K, 4000K; Tunable White (2700K-5700K)	
CRI:	83 or 90+ typ. (2700K, 3000K, 3500K, 4000K) 90+ (Tunable White)	
Dimming (wired):	Static White 0-10V, 1% dimming (standard) Lutron Hi-lume® 2 wire (120V only) Lutron Hi-lume® EcoSystem, 1% dim, fade to off DALI dimming, 1% dim	Tunable White 0-10V TW, 1% dimming DALI DT8, 1% digital dimming Lutron T Series 1% dimming
Dimming (wireless):	Enlighted Sensor Lutron Athena (integral wireless RF node)	Enlighted Sensor TW Lutron Athena TW (integral wireless RF node)

9 Drivers/Controls
Wired - Static White:
0-10V - 1% analogue dimming, 120-277VAC, Dim to off when selected with wireless dimming control
HILUME-H-ECO - Lutron "H" Series, 1% dim, fade to off, EcoSystem
DALI - DALI Dimming 120-277VAC, 1% dim
Wired - Tunable White:
0-10V TW - 1% dimming , multi-volt (120V-277V) constant current
DALI DT8 - 1% digital dimming, CCT control per DALI DT8, (120V-277V) constant current
Lutron T - Lutron T Series, digital link 1% dimming, (120V-277V)
Wireless - Static White:
ENLS-SR - Enlighted sensor, energy metering (not available w/Gruv 1.5 FR)
ENLS-010 - Enlighted sensor with controller unit (not available w/Gruv 1.5 FR)
AWNR-WH-SR - Lutron Athena wireless node, RF only, white
AWNR-BL-SR - Lutron Athena wireless node, RF only, black
AWNR-WH-010 - Lutron Athena wireless node, RF only, white
AWNR-BL-010 - Lutron Athena wireless node, RF only, black
Wireless - Tunable White:
ENLS-SR-TW - Enlighted sensor, energy metering (not available w/Gruv 1.5 FR)
AWNR-WH-SR-TW - Lutron Athena wireless node, RF only, white
AWNR-BL-SR-TW - Lutron Athena wireless node, RF only, black

10 Options/Accessories
CP - Chicago Plenum (CCEA)
WHIP - 6' whip, 18/5 conductor
EMC-PF[2] - emergency circuit requires power feed located in last fixture section (for other locations consult factory)
PF[2] - Extra power feed for additional circuiting
EMB - emergency battery pack (not available for lengths under 4')

1 - Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
2 - Not available with IND (individual) configuration.
† The "A" refers to the sequential revision in a year and "XX" refers to the year of update. Updates coincide with improved performance while not changing the overall fixture aesthetic and are reflected in the published performance data. Please contact your Amerlux representative for explanations of changes.

Grüv® 2.5”

Recessed Linear LED

amerlux
A Delta Group Company

Grüv 2.5" Recessed Linear

PROJECT: **TYPE:**

Specifications

Application

Commercial and retail recessed ambient lighting can be customized with made to measure lengths, patterns, ceilings or wall mounted fixtures.

Construction

One piece extruded aluminum housing and trim. Die-formed, cold-rolled steel internal components and external mounting brackets. Numerous configurations accommodate most architectural ceiling conditions.

Optical

All lenses are snap-in, extruded acrylic, with a maximum length of 8'. Amerlux's proprietary acrylic lens provides excellent transmission while effectively concealing source image.
PL - Performance Lens provides high efficiency with controlled lens surface brightness (standard).
DL - Designer Lens provides flat even glow on lens. Best when lens is in direct or constant view. Such as vertical wall mounted.
SLD - Straight blade Louver Direct has ½" high blades ½" on center with overlay.
DRP1 - 1" Drop lens with illuminated end caps

LED

Amerlux's boards and patented connector design with brand name LEDs enables Amerlux fixtures to have excellent thermal management and offer a 5 year warranty. Our LED binning is within 3 MacAdam ellipse. Boards are configured for maximum flexibility resulting in even illumination no matter the fixture layout. LED boards are easily replaced in the field with just a Phillips screw driver.

	Static White	Tunable White
CCT:	2700K, 3000K, 3500K, 4000K	2700K-5700K
CRI:	83 or 90+ typical	90+ (92 typ)
R9:	16 @ CRI 83; >50 @ CRI 90+	>50

Life: 50,000+ hr., > 70% of initial lumens (L70)

Electrical

Wiring: Supply wires are easily accessible through access plate on top of fixture.
WHIP: Optional factory installed 6' Greenfield whip (18/5 conductor) simplifies installation.
Standard Wattage: 5W/ft, 10W/ft.
Optional Wattages: 3W/ft, 4W/ft, 6W/ft, 7W/ft, 8W/ft, 9W/ft. (3W & 4W have a minimum length of 4'). For other wattages consult factory.
Emergency circuit via remote inverter or auxiliary emergency power supply (by others).
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge and over voltage damage is not covered under warranty.
EMC-PF - Emergency circuit requires power feed wire harness to be located in last fixture section for continuous runs. For other locations consult factory. Not available for individual (IND) configuration.
PF - Extra power feed wire harness for additional circuiting. Not available for individual (IND) configuration.

Finish

HW - High reflectance, matte white powder coat paint. Baked on finish for maximum durability and color stability.

Configurations/Lengths

IND - Individual fixtures are made of single standard lengths of 2 ft to 8 ft (in 1' increments). These are stand alone fixtures with matching End Caps, supplied with the mounting hardware. Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
CON - Continuous runs, > 8', specified to nearest whole foot length in 1' increments. Runs made from standard lengths have End Caps at the beginning and end of run. Runs > 60' may require second power feed. Each housing has factory installed alignment pins. Mating fixtures are easily aligned and joined with "catch and latch" mechanisms out of sight, on top of the Housing. Wiring is made fast and positive with molded quick connectors.
S+ - Standard Plus is a field cuttable filler bracket that can be used when an Individual fixture or a Continuous run isn't to the nearest foot (+3/4" to 6" max per end). *See page 7 for details.*
CUS - Custom made yo measure runs are made to nearest 1/8"of customer supplied field measurements or drawings. Custom lengths use the same hardware for hairline joining.
PXX - Standard Patterns consist of 90º corners with standard lengths (4' to 8' in 1' increments), continuous runs or made to measure lengths. Depending upon complexity of the pattern drawings may be required from the Customer. If ordering please give overall lengths.
A'-B'-PLL - L Left - (1) 90º Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PLR - L Right - (1) 90º Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PR - Rectangle - (4) 90º Corners joining 4 segments. Specify overall segments: A' & B'
A'-B'-C'-PU - U shape - (2) 90º Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-C'-PZ - Z shape - (2) 90º Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-PWC - Wall to Ceiling - 90º joining bracket. Specify overall segments: A' & B'
See page 8 for layouts.
PC - Custom Patterns may use standard lengths, Made To Measure, 90º or other corners (some limitations). Please provide drawing and consult factory.
Please note: Corners have lit mitered Lens.

Mounting

Intended for use in gypsum board, 9/16" Tee grid, 9/16" Screw Slot and millwork ceilings. Wall mounting J-Molding details available. For individual, continuous row, or pattern applications.
***Please note* - fixtures to be installed before gypsum board ceiling.**
GRUV2.5-FLG-A16 - exposed flange, fixture into gyp board ceiling
GRUV2.5-FLG-GRID-A16 - exposed flange grid mount, fixture in 9/16" Tee ceilings. *Consult factory for 15/16" ceilings.*
GRUV2.5-GB-A16 - gyp trimless mud, fixture plastered in gypsum board ceiling
GRUV2.5-GRID-A16 - grid mount, in 9/16" Screw Slot or Flat Tee ceilings
GRUV2.5-IS-A16 -independently suspended, fixture in wood ceiling
GRUV2.5-J/GB-A16 - J mold/gyp trimless, plastered in ceiling - J Channel wall side
GRUV2.5-J/GRID-A16 - J mold/grid, in 9/16" Screw Slot or Flat Tee ceiling - J Channel wall side
GRUV2.5-J-IS-A16 - J mold/independently suspended in ceiling - J Channel wall side

Options

EMB - Emergency battery pack - 10W output power, 90 min of illumination time, up to 1300 lm of initial light output. Illuminated test-switch/charging indicator light is provided. Wattage consumption by EM: 2.5W/ft (4ft fixture), 1.66W/ft (6ft fixture), 1.25W/ft (8ft fixture). Request can be made to light up 4ft section on 8ft unit.

Certifications

Approved to UL standards for damp locations as tested by CSA
Intended for indoor use only
Chicago Plenum (CCEA) optional

Warranty

Amerlux's 5 year limited warranty. Please consult Amerlux website for details.

STANDARD PLUS

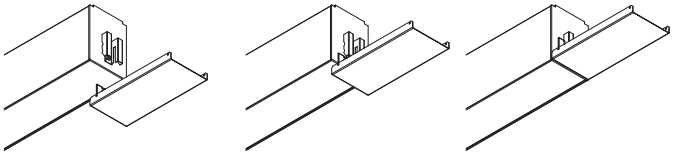
STANDARD PLUS (FILLER):

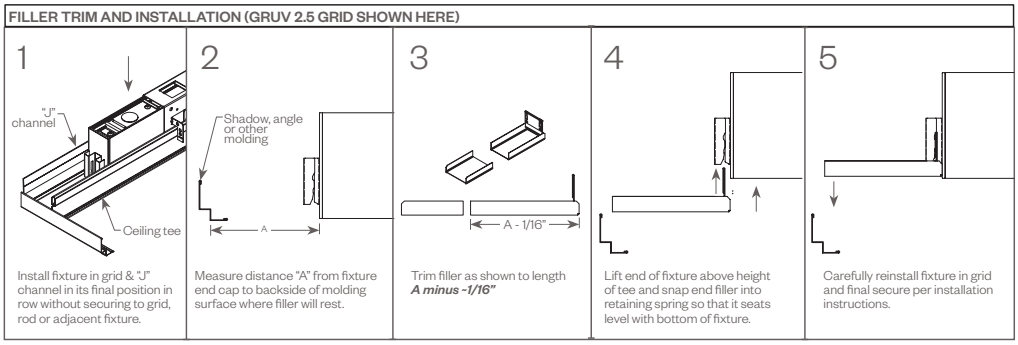
Whenever a continuous run is less than a foot to the next full foot length consider ordering Standard Plus field cuttable bracket for a perfect look. Fits 9/16" Slot Grid and 9/16" T grid. It snaps in place easily from below and gets you close to the wall with a standard fixture. Saves time and money compared to made-to-measure. (max length: 6")

GRID VERSION



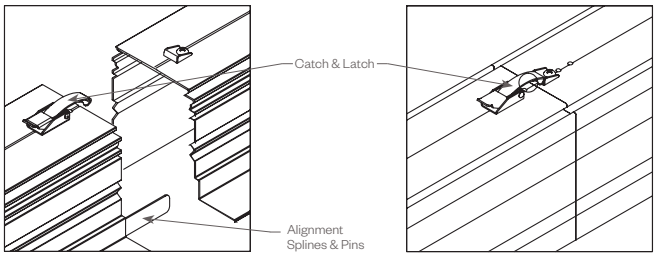
NOTE: Use with Gruv2.5-Grid and Gruv2.5-J/Grid

FILLER TRIM AND INSTALLATION (GRUV 2.5 GRID SHOWN HERE)



TOOLLESS JOINING

Line up the two housings by using the alignment splines & pins. Secure them together by using the Catch & Latch System on the top of the extrusion.



OPTIONAL SENSOR/RF NODE:

Amerlux® has partnered with control companies to create building environments that are safer, and smarter, than ever before. At the heart of our partnership is intelligent RF nodes and Smart Sensor, the most advanced digital wireless communication and sensors available today. Integrated into Amerlux products.

Minimum run length is 3' for wireless sensor and RF node.

Recessed Linear LED

amerlux
A Delta Group Company

PROJECT: **TYPE:**

STATIC WHITE - DIMMING COMPATIBILITY:
Amerlux® Gruv fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

0-10V - DIMMING (Standard)

Integrates into a variety of building management and daylighting controls

Notes:

- 120V or 277V*
- Dims down to 1% light output
- Requires interface to turn off power to driver
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

Compatible Dimmers†:

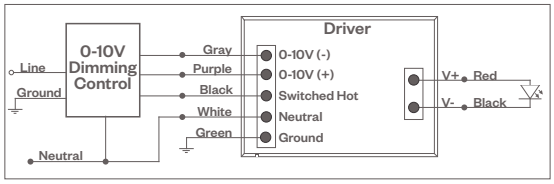
Wall Box

Lutron:	Wattstopper:	Leviton:
Diva - DVSTV	ADF-120277	Renoir II
Maestro - MS-Z101		
Nova-T - NTSTV-DV		

Center System

Lutron Grafixk Eye with GRX-TV1 Interface

0-10V Wiring Diagram



LUTRON HI-LUME ECOSYSTEM DIMMING

Integrates into Lutron EcoSystem building management

Notes:

- 120VAC or 277VAC*
- Dims down to 1% light output
- EcoSystem Control
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

Compatible Dimmers†:

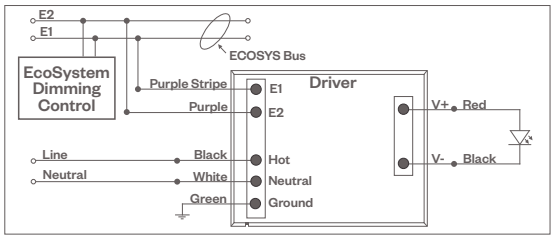
Lutron ECO System

Pow Pak Dimming Modules
Energi Savr Node
Grafik Eye QS/Homeworks
QS Control Unit
Quantum Hub
Homeworks QS/My Room

Central System

Lutron EcoSystem compatible controls

HILUME-H-ECO EcoSystem Digital Control Wiring Diagram



Notes:

* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer installation instructions for 277VAC wiring diagrams.

† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

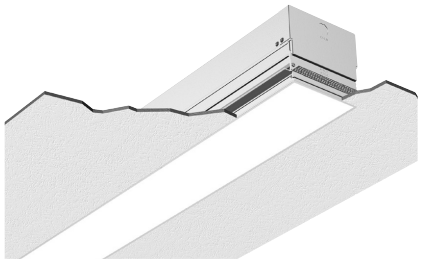
Grüv® 6" High Efficiency

Recessed Linear LED

amerlux
A Delta Group Company



Features

Designed to provide high-performance, visually comfortable, high efficient ambient lighting with a 6" aperture for commercial and office environments. Featuring improved extruded aluminum and steel construction, superb aesthetics, lower costs and shorter lead times. Grüv 6 HE is more effective and aesthetically appealing than many recessed linear fixtures available today. Offering 5 or 10 watts per foot. Available for gyp board or grid ceilings (TechZone compatible).

Product Overview

Type:	Recessed Lens Direct	
Wattage:	5W/ft, 10W/ft (other wattages availavle see p2)	
Color Temp:	2700K, 3000K, 3500K, 4000K; Tunable White (2700K-5700K)	
CRI:	83 or 90+ typ. (2700K, 3000K, 3500K, 4000K) 90+ (Tunable White)

10 Options/Accessories
CP - Chicago Plenum (CCEA)
WHIP - 6' whip, 18/5 conductor
EMC-PF[2] - emergency circuit requires power feed located in last fixture section (for other locations consult factory)
PF[2] - Extra power feed for additional circuiting
EMB - emergency battery pack (not available for lengths under 4')

1 - Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
2 - Not available with IND (individual) configuration.
† The "A" refers to the sequential revision in a year and "XX" refers to the year of update. Updates coincide with improved performance while not changing the overall fixture aesthetic and are reflected in the published performance data. Please contact your Amerlux representative for explanations of changes.

Kugler Ning Lighting

Grüv® 6" High Efficiency

Recessed Linear LED

amerlux
A Delta Group Company

PROJECT: **TYPE:**

Specifications

Application

Commercial and retail recessed ambient lighting can be customized with made to measure lengths, patterns, ceilings or wall mounted fixtures.

Construction

Heavy gauge steel upper housing is secured to aluminum extruded trim rails. Die-formed, cold-rolled steel internal components and external mounting brackets. Numerous configurations accommodate most architectural ceiling conditions.

Optical

All lenses are snap-in, extruded acrylic, with a maximum length of 8'. Amerlux's proprietary acrylic lens provide excellent transmission while effectively concealing source image.
PL - Performance Lens provides high efficiency with controlled lens surface brightness.
DL - Designer Lens provides flat even glow on lens. Best when lens is in direct or constant view. Such as vertical wall mounted.

LED

Amerlux's boards and patented connector design with brand name LEDs enables Amerlux fixtures to have excellent thermal management and offer a 5 year warranty. Our LED binning is within 3 MacAdam ellipse. Boards are configured for maximum flexibility resulting in even illumination no matter the fixture layout. LED boards are easily replaced in the field with just a Phillips screw driver.

Static White	Tunable White
CCT: 2700K, 3000K, 3500K, 4000K	2700K-5700K
CRI: 83 or 90+ typical	90+ (92 typ)
R9: 16 @ CRI 83; >50 @ CRI 90+	>50

Life: 50,000+ hr., > 70% of initial lumens (L70)

Electrical

Wiring: Supply wires are easily accessible through access plate on top of fixture.
WHIP: Optional factory installed 6' Greenfield whip (18/5 conductor) simplifies installation.
Standard Wattage: 5W/ft, 10W/ft.
Optional Wattages: 3W/ft, 4W/ft, 6W/ft, 7W/ft, 8W/ft, 9W/ft. (3W & 4W have a minimum length of 4'). For other wattages consult factory. Emergency circuit via remote inverter or auxiliary emergency power supply (by others).
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge and over voltage damage is not covered under warranty.
EMC-PF - Emergency circuit requires power feed wire harness to be located in last fixture section for continuous runs. For other locations consult factory. Not available for individual (IND) configuration.
PF - Extra power feed wire harness for additional circuiting. Not available for individual (IND) configuration.

Finish

HW - High reflectance, matte white powder coat paint. Baked on finish for maximum durability and color stability.

Configurations/Lengths

IND - Individual fixtures are made of single standard lengths of 2 ft to 8 ft (in 1' increments). These are stand alone fixtures with matching End Caps, supplied with the mounting hardware. Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
CON - Continuous runs, > 8', specified to nearest whole foot length in 1' increments. Runs made from standard lengths have End Caps at the beginning and end of run. Runs > 60' may require second power feed. Each Housing has factory installed alignment pins. Mating fixtures are easily aligned and joined with "catch and latch" mechanisms out of sight, on top of the Housing. Wiring is made fast and positive with molded quick connectors.
S+ - Standard Plus is a field cuttable filler bracket that can be used when an Individual fixture or a Continuous run isn't to the nearest foot (+3/4" to 6" max per end). *See page 7 for details.*
CUS - Custom made to measure runs are made to nearest 1/8"of customer supplied field measurements or drawings. Custom lengths use the same hardware for hairline joining.
PXX - Standard Patterns consist of 90° corners with standard lengths (4' to 8' in 1' increments), continuous runs or made to measure lengths. Depending upon complexity of the pattern drawings may be required from the Customer. If ordering please give overall lengths.
A'-B'-PLL - L Left - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PLR - L Right - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PR - Rectangle - (4) 90° Corners joining 4 segments. Specify overall segments: A' & B'
A'-B'-C'-PU - U shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-C'-PZ - Z shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-PWC - Wall to Ceiling - 90° joining bracket. Specify overall segments: A' & B'
See page 8 for layouts.
PC - Custom Patterns may use standard lengths, Made To Measure, 90° or other corners (some limitations). Please provide drawing and consult factory.
Please note: Corners have lit mitered Lens.

Mounting

Intended for use in gypsum board, 9/16" Tee grid and Screw Slot, and millwork ceilings. Wall mounting J-Molding details available. For individual, continuous row, or pattern applications.
Please note* - *fixtures to be installed before gypsum board ceiling.
GRUV6-HE-FLG-A16 - exposed flange, fixture into gypsum board ceiling
GRUV6-FLG-GRID-A16 - exposed flange grid mount, fixture in 9/16" Flat Tee ceilings. *Consult factory for 15/16" ceilings.*
GRUV6-HE-GB-A16 - gyp trimless mud, fixture plastered in gypsum board ceiling
GRUV6-HE-GRID-A16 - grid mount, in 9/16" Screw Slot or Flat Tee ceilings (compatible with 6" TechZone™ & other 6" wide architectural ceiling systems)
GRUV6-HE-IS-A16 - independently suspended, fixture in wood ceiling
GRUV6-HE-J/GB-A16 - J mold/gyp trimless, plastered in ceiling - J Channel wall side
GRUV6-HE-J/GRID-A16 - J mold/grid, in 9/16" Screw Slot or Flat Tee ceilings - J Channel wall side
GRUV6-HE-J-IS-A16 - J mold/independently suspended in ceiling - J Channel wall side.

Options

EMB - Emergency battery pack - 10W output power, 90 min of illumination time, up to 1300 lm of initial light output. Illuminated test-switch/charging indicator light is provided. Wattage consumption by EM: 2.5W/ft (4ft fixture), 1.66W/ft (6ft fixture), 1.25W/ft (8ft fixture). Request can be made to light up 4ft section on 8ft unit.

Certifications

Approved to UL standards for damp locations as tested by CSA
Intended for indoor use only
Chicago Plenum (CCEA) optional

Warranty

Amerlux's 5 year limited warranty. Please consult Amerlux website for details.

STANDARD PLUS

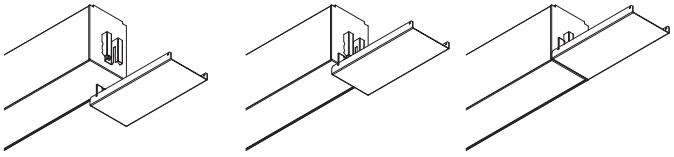
STANDARD PLUS (FILLER):

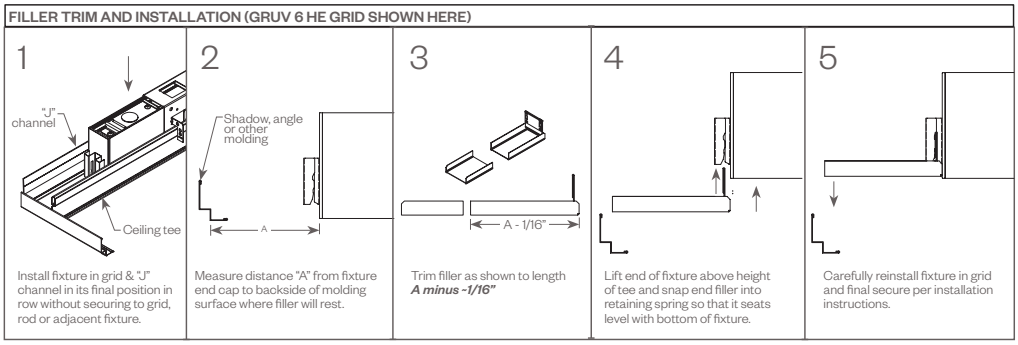
Whenever a continuous run is less than a foot to the next full foot length consider ordering Standard Plus field cuttable bracket for a perfect look. Fits 9/16" Slot Grid and 9/16" T grid. It snaps in place easily from below and gets you close to the wall with a standard fixture. Saves time and money compared to made-to-measure. (max length: 6")

GRID VERSION



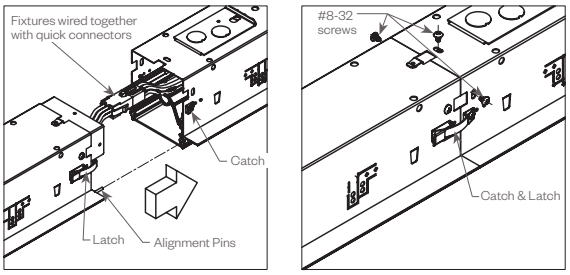
NOTE: Use with GRUV6HE-GRID and GRUV6HE-J/GRID

FILLER TRIM AND INSTALLATION (GRUV 6 HE GRID SHOWN HERE)



TOOLLESS JOINING

Line up the two housings by using the alignment pins. Secure them together by using the Catch & Latch System on the side of the extrusion.



OPTIONAL SENSOR/RF NODE:

Amerlux® has partnered with control companies to create building environments that are safer, and smarter, than ever before. At the heart of our partnership is intelligent RF nodes and Smart Sensor, the most advanced digital wireless communication and sensors available today. Integrated into Amerlux products.

Minimum run length is 3' for wireless sensor and RF node.

PROJECT: **TYPE:**

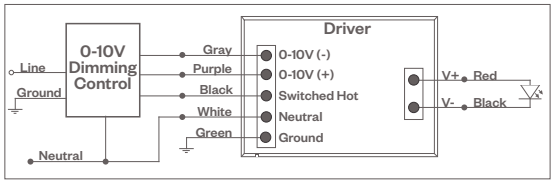
STATIC WHITE - DIMMING COMPATIBILITY:
Amerlux® Gruv fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

0-10V - DIMMING (Standard)
Integrates into a variety of building management and daylighting controls

Notes:
- 120V or 277V*
- Dims down to 1% light output
- Requires interface to turn off power to driver
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

0-10V Wiring Diagram



Compatible Dimmers†:

Wall Box

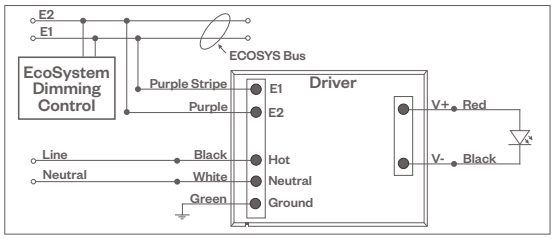
Lutron:	Wattstopper:	Leviton:
Diva - DVSTV	ADF-120277	Renoir II
Maestro - MS-Z101		
Nova-T - NTSTV-DV		

Center System
Lutron Grafixk Eye with GRX-TV1 Interface

LUTRON HI-LUME ECOSYSTEM DIMMING
Integrates into Lutron EcoSystem building management

Notes:
- 120VAC or 277VAC*
- Dims down to 1% light output
- EcoSystem Control
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

HILUME-H-ECO EcoSystem Digital Control Wiring Diagram



Compatible Dimmers†:

Lutron ECO System
Pow Pak Dimming Modules
Energi Savr Node
Grafik Eye QS/Homeworks
QS Control Unit
Quantum Hub
Homeworks QS/My Room

Central System
Lutron EcoSystem compatible controls

Notes:
* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer installation instructions for 277VAC wiring diagrams.
† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

Grüv® 2.5" Perimeter Cove

Recessed Linear LED

amerlux
A Delta Group Company

Grüv 4" HE Perimeter Cove

Features

Designed to provide high-performance, visually comfortable, high efficient comfortable perimeter ambient lighting with a 2.5" aperture for commercial and office environments. Featuring a 2.5" regress and a choice of ceiling interface options, Gruv 2.5 Cove is an effective and aesthetically pleasing way of lighting space perimeters.

Product Overview

Type:	Recessed Lens Direct
Wattage:	5W/ft, 10W/ft (other wattages available see p2)
Lumen Output:	3,662 max; 92.1 Lm/W (10W, 4ft fixture)
Color Temp:	2700K, 3000K, 3500K, 4000K
CRI:	83 typ. or 90+ typ
Dimming:	0-10V, 1% dimming (standard) Lutron Hi-lume® EcoSystem, 1% dim, fade to off DALI dimming, 1% dim

Kugler Ning Lighting

Grüv® 2.5" Perimeter Cove

Recessed Linear LED

amerlux
A Delta Group Company

PROJECT: **TYPE:**

Specifications

Application

Commercial and retail recessed perimeter cove ambient lighting.

Construction

Heavy gauge steel upper housing is secured to aluminum extruded trim rails. Die-formed, cold-rolled steel internal components and external mounting brackets. Numerous configurations accommodate most architectural ceiling conditions.
Die formed steel cove walls - powder coat painted.

Optical

All lenses are snap-in, extruded acrylic, with a maximum length of 8'. Amerlux's proprietary acrylic lens provide excellent transmission while effectively concealing source image.
PL - Performance Lens provides high efficiency with controlled lens surface brightness (standard).
DL - Designer Lens provides flat even glow on lens. Best when lens is in direct or constant view. Such as vertical wall mounted.

LED

Amerlux's boards and patented connector design with brand name LEDs enables Amerlux fixtures to have excellent thermal management and offer a 5 year warranty. Our LED binning is within 3 MacAdam ellipse. Boards are configured for maximum flexibility resulting in even illumination no matter the fixture layout. LED boards are easily replaced in the field with just a Phillips screw driver.
Color Temperature Options: 2700K, 3000K, 3500K, 4000K
CRI: 83 typical, 90+ typical
R9: 16 @ CRI 83
R9: >50 @ CRI 92
Life: 50,000+ hr., > 70% of initial lumens (L70)

Electrical

Wiring: Supply wires are easily accessible through access plate on top of fixture.
WHIP: Optional factory installed 6' Greenfield whip (18/5 conductor) simplifies installation.
Standard Wattage: 5W/ft, 10W/ft.
Optional Wattages: 3W/ft, 4W/ft, 6W/ft, 7W/ft, 8W/ft, 9W/ft. (3W & 4W have a minimum length of 4'). For other wattages consult factory.
Emergency circuit via remote inverter or auxiliary emergency power supply (by others).
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge and over voltage damage is not covered under warranty.
EMC-PF - Emergency circuit requires power feed to be located in last fixture section for continuous runs. For other locations consult factory. Not available for individual (IND) configuration.
PF - Extra power feed for additional circuiting. Not available for individual (IND) configuration.

Drivers

0-10V - 1% electronic dimming, multi-volt (120-277VAC) constant current driver (standard). Cap leads for non-dim applications.
Optional Drivers:
HILUME-A-LTE - Lutron "A" Series, 1% dim, 2-wire, 120V only
HILUME-H-ECO - Lutron "H" Series, 1% dim, fade to off, EcoSystem
DALI - DALI Dimming 120-277VAC, 1% dim

Finish

HW - High reflectance, matte white powder coat paint. Baked on finish for maximum durability and color stability.

Configurations/Lengths

IND - Individual fixtures are made of single standard lengths of 2 ft to 8 ft (in 1' increments). These are stand alone fixtures with matching End Caps, supplied with the mounting hardware. Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
CON - Continuous runs, > 8', specified to nearest whole foot length in 1' increments. Runs made from standard lengths have End Caps at the beginning and end of run. Runs > 60' may require second power feed. Each Housing has factory installed alignment pins. Mating fixtures are easily aligned and joined with "catch and latch" mechanisms out of sight, on top of the Housing. Wiring is made fast and positive with molded quick connectors.
CUS - Custom made to measure runs are made to nearest 1/8"of customer supplied field measurements or drawings. Custom lengths use the same hardware for hairline joining.
PXX - Standard Patterns consist of 90° corners with standard lengths (4' to 8' in 1' increments), continuous runs or made to measure lengths. Depending upon complexity of the pattern drawings may be required from the Customer. If ordering please give overall lengths.
A'-B'-PLL - L Left - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PLR - L Right - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PR - Rectangle - (4) 90° Corners joining 4 segments. Specify overall segments: A' & B'
A'-B'-C'-PU - U shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-C'-PZ - Z shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
See page 8 for layouts.

Mounting

Intended for use in gypsum board, 9/16" Tee grid and Screw Slot, and millwork ceilings. Wall mounting J-Molding details available. For individual, continuous row, or pattern applications.
Please note - fixtures to be installed before gypsum board ceiling.
GRUV2.5-IS-J/GB-COVE - J mold/gyp trimless, plastered in ceiling - J Channel wall side
GRUV2.5-IS-J/GRID-COVE - J mold/grid, in 9/16" Screw Slot or Flat Tee ceilings - J Channel wall side
GRUV2.5-IS-J/FLG-COVE - J mold/flange - J Channel wall side

Certifications

Approved to UL standards for damp locations as tested by CSA Intended for indoor use only
Chicago Plenum (CCEA) optional

Warranty

Amerlux's 5 year limited warranty. Please consult Amerlux website for details.

PROJECT: **TYPE:**

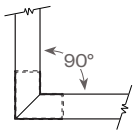
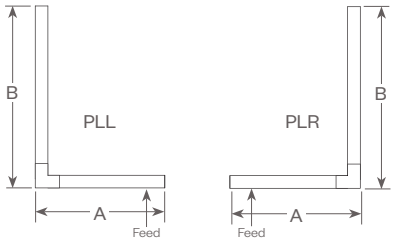
GRUV 2.5" PATTERNS:

Standard Patterns
All corners are standard 90°, standard length legs.
Use standard lengths: 4' min to 8' in 1 foot increments.
Continuous runs must be the same length in pairs for closed configuration.

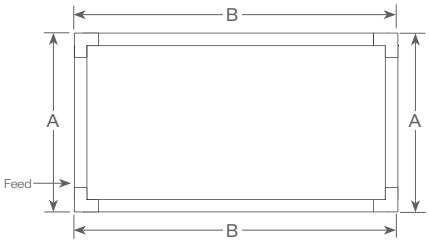
Custom Patterns
Please provide drawings of your configuration.
Made to Measure: +/- 1/8", consult factory.
PC - custom pattern, please provide drawings and consult factory



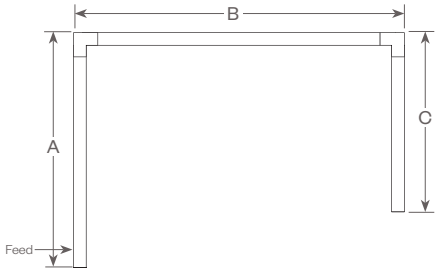
Gruv 2.5 Lens
Mitered Lens



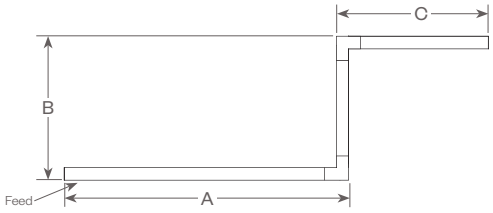
PLL - L Left, (2) straights + (1) 90° corner, leg right
PLR - L Right, (2) straights + (1) 90° corner, leg left
Provide overall lengths: A' & B'
Nomenclature: A-B-PLL A-B-PLR



PR - Closed Rectangle, (4) straight lengths + (4) 90° corners
Provide overall lengths: A' & B'
Nomenclature: A-B-PR



PU - Open U, (3) straight lengths + (2) 90° corners
Provide overall lengths: A', B' & C'
Nomenclature: A-B-C-PU



PZ - Open Z, (3) straight lengths + (2) 90° corners
Provide overall lengths: A', B' & C'
Nomenclature: A-B-C-PZ

Grüv® 2.5" Perimeter Cove

Recessed Linear LED

amerlux
A Delta Group Company

PROJECT: **TYPE:**

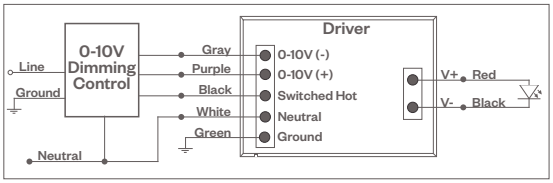
DIMMING COMPATIBILITY:
Amerlux® Gruv fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

0-10V - DIMMING (Standard)
Integrates into a variety of building management and daylighting controls

Notes:
- 120VAC or 277VAC*
- Dims down to 1% light output
- Requires interface to turn off power to driver
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

0-10V Wiring Diagram



Compatible Dimmers†:

Wall Box

Lutron:	Wattstopper:	Leviton:
Diva - DVSTV	ADF-120277	Renoir II
Maestro - MS-Z101		
Nova-T - NTSTV-DV		

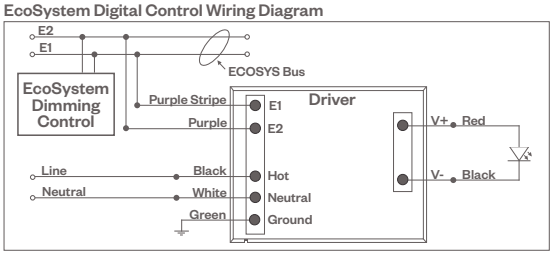
Center System

Lutron Grafixk Eye with GRX-TV1 Interface

LUTRON HI-LUME ECOSYSTEM DIMMING
Integrates into Lutron EcoSystem building management

Notes:
- 120VAC or 277VAC*
- Dims down to 1% light output
- EcoSystem Control
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

HILUME-H-ECO
EcoSystem Digital Control Wiring Diagram



Compatible Dimmers†:

Lutron ECO System	Central System
Pow Pak Dimming Modules	Lutron EcoSystem compatible controls
Energi Savr Node	
Grafik Eye QS/Homeworks	
QS Control Unit	
Quantum Hub	
Homeworks QS/My Room	

Notes:
* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer installation instructions for 277VAC wiring diagrams.
† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

Kugler Ning Lighting

Hornet® HP

Round Lensed Downlight/Wall Wash

amerlux
A Delta Group Company

PROJECT: **TYPE:**

Specifications

Application

Retail and commercial ambient or wall wash lighting

Construction

20 ga. galvanized steel frame
18 ga. galvanized steel splice housing and hanger brackets (not for Remodeler version)
Cast aluminum plaster frame with perforated face (for trimless version only)
Die-cast optical housing and trim
Die-cast heat sink

Optical

Lens Options (for RLD version):
Satin Ice lens for maximum source concealment and wide distribution with a visually "hotter" aperture.
Solite lens for maximum efficacy and a visually quieter aperture. 30°, 50° and 65° beam spread options. Visually best with SLV reflector finish.

Beam spreads (for RLD version):
30SOL - 30° beam with solite lens
50SOL - 50° beam with solite lens
65SOL - 65° beam with solite lens
75SAT - 75° beam with satin ice lens

Wall Wash:
Engineered nano technology lens provides high transmission while concealing LED image

LED

Color Temp Options:
2200K, 2700K, 3000K, 3500K, 4000K
CRI: 83 typ. (2700K, 3000K, 3500K, 4000K)
90+ typ. (2200K, 2700K, 3000K, 3500K, 4000K)
CrispWhite* and Class A** 3000K LEDs available
R9 Values: 11 (83 CRI), 55 (92 CRI)
Binning: 3 MacAdam (SDCM)
Life: 50,000+ hrs, > 70% of initial lumens at 50,000 hrs

**CrispWhite:* *CrispWhite Technology delivers the warmth of colors expected from a high 90 CRI solution but also creates the natural crisp white color that is pleasing to the eye. It creates the most impactful lighting ever available, by revealing the richest whites and vibrant colors that pop.*

***Class A LED: Class A LED's have a CRI > 80 and a GAI > 80. CRI defines color "Naturalness" and GAI defines color "Saturation." Both being high delivers rich colors and pure whites.*

Electrical

Wattage: 9, 12, 16, 23, 27, 30
Electronic constant current LED driver, 120/277VAC input
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge and over voltage damage is not covered under warranty.
Note: *Drivers are universal but thermal protector is voltage specific*

Drivers

LE/TE - Leading Edge, TRIAC, forward phase/Trailing Edge, ELV, reverse phase
0-10V, Lutron and DALI systems available
See pages 10-12 for more dimming information

Finish

Powder coat paint/wet paint
Consult factory for custom finishes

Mounting

26" Hanger bars included (except for Remodeler versions)
Optional **HB49** - hanger bars from min 29" to max 49" available
Trimmed Fixture:
For use in grid or sheetrock ceilings, 5/8" - 2" max (1" max for RLW trims) standard
Trimless Fixture:
For use in sheetrock ceilings, max ceiling thickness 5/8"
Millwork Fixture:
Millwork extension collars are based on ceiling material specifications and thickness. Provides flush trim appearance level with ceiling material. Ceiling thickness 1/2"-11/16". Consult factory for use in ceilings thicker than 11/16".
Not available for use with Remodeler model.

Certifications

CSA damp as tested to UL 1598 standards
CP - Chicago Plenum (CCEA) option
IC/AT rated (optional, 16W only)
Title 24 Compliant (see ordering page for options that apply)
Damp location
Wet location option

Warranty

5 year limited warranty

Emergency Battery Pack (EM)

Powers fixture at 5.1 watts (approx. 400 Lm) for 90 minutes *(not for use with REM, CP or IC/AT versions)*

PROJECT: **TYPE:**

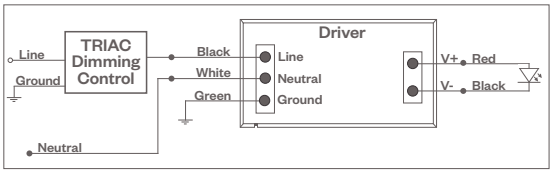
DIMMING COMPATIBILITY:
Amerlux® Hornet fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

TRIAC (Forward Phase) DIMMING (Standard)
Utilizes standard TRIAC dimmers that are in wide use in installations across the US. Best for retrofit applications where TRIAC dimmers are installed.

Notes:
- 120VAC or 277VAC*
- Dims down to 5% light output (most cases)
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!
- Must meet dimmer Minimum Load Requirements per dimming manufacturer

TRIAC Wiring Diagram



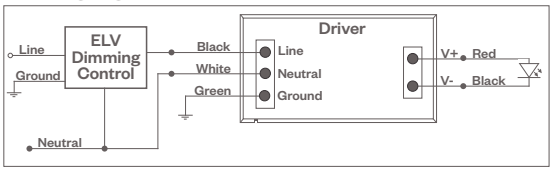
Compatible Dimmers†:

Wall Box (TRIAC 120VAC)	**Central System**
Lutron "Diva"	Lutron "GP" Panel
Lutron "Nova-T"	Lutron Grafik Eye QS
Lutron "Maestro"	
Lutron "Vareo"	
Lutron "Skylark"	

ELV - Electronic Low Voltage (Reverse Phase) DIMMING (Standard)
Utilizes specialized "ELV" dimmers.

Notes:
- 120VAC or 277VAC*
- Dims down to 5% light output (most cases)
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!
- Must meet dimmer Minimum Load Requirements

ELV Wiring Diagram



Compatible Dimmers†:

Wall Box (ELV 120VAC)	**Wall Box** (ELV 277VAC)	**Central System**
Lutron "Diva"	Leviton Revoir II AWSMT-E	Lutron "GP" Panel with PHPM-PA 120/277VAC
Lutron "Nova-T"		Lutron Grafik Eye QS with PHPM-PA 120/277VAC
Lutron "Maestro"		
Lutron "Vareo"		
Lutron "Skylark"		
Leviton "Surslide"		
Leviton "Vizio"		

Notes:
* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer manufacturer installation instructions for 277VAC wiring diagrams.
† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

PROJECT: **TYPE:**

Specifications

Application
Retail and commercial ambient or wall wash lighting

Construction
20 ga. galvanized steel frame
18 ga. galvanized steel splice housing and hanger brackets (not for Remodeler version)
Cast aluminum plaster frame with perforated face (for trimless version only)
Die-cast optical housing and trim
Die-cast heat sink

Optical
Lens Options (for SLD version):
Satin Ice lens for maximum source concealment and wide distribution with a visually "hotter" aperture.
Solite lens for maximum efficacy and a visually quieter aperture. 30º, 50º and 65º beam spread options. Visually best with SLV reflector finish.
Beam spreads (for SLD version):
30SOL - 30º beam with solite lens
50SOL - 50º beam with solite lens
65SOL - 65º beam with solite lens
75SAT - 75º beam with satin ice lens
Wall Wash:
Engineered nano technology lens provides high transmission while concealing LED image

LED
Color Temp Options:
2200K, 2700K, 3000K, 3500K, 4000K
CRI: 83 typ. (2700K, 3000K, 3500K, 4000K)
90+ typ. (2200K, 2700K, 3000K, 3500K, 4000K)
CrispWhite* and Class A** 3000K LEDs available
R9 Values: 11 (83 CRI), 55 (92 CRI)
Binning: 3 MacAdam (SDCM)
Life: 50,000+ hrs, > 70% of initial lumens at 50,000 hrs
**CrispWhite:* *CrispWhite Technology delivers the warmth of colors expected from a high 90 CRI solution but also creates the natural crisp white color that is pleasing to the eye. It creates the most impactful lighting ever available, by revealing the richest whites and vibrant colors that pop.*
***Class A LED:* *Class A LED's have a CRI > 80 and a GAI > 80. CRI defines color "Naturalness" and GAI defines color "Saturation." Both being high delivers rich colors and pure whites.*

Electrical
Wattage: 9, 12, 16, 23, 27, 30
Electronic constant current LED driver, 120/277VAC input
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge and over voltage damage is not covered under warranty.
***Note:** Drivers are universal but thermal protector is voltage specific*

Drivers
LE/TE - Leading Edge, TRIAC, forward phase/Trailing Edge, ELV, reverse phase
0-10V, Lutron and DALI systems available
See pages 10-12 for more dimming information

Finish
Powder coat paint/wet paint
Consult factory for custom finishes

Mounting
26" Hanger bars included (except for Remodeler versions)
Optional **HB49** - hanger bars from min 29" to max 49" available
Trimmed Fixture:
For use in grid or sheetrock ceilings, 5/8" - 2" max (1" max for SLW trims) standard
Trimless Fixture:
For use in sheetrock ceilings, max ceiling thickness 5/8"
Millwork Fixture:
Millwork extension collars are based on ceiling material specifications and thickness. Provides flush trim appearance level with ceiling material.
For **SLD** trim - ceiling thickness 1/2"- 11/16", consult factory for use in thicker ceilings.
For **SLW** trim - max ceiling thickness is 11/16".
Not available for use with Remodeler model

Certifications
CSA damp as tested to UL 1598 standards
CP - Chicago Plenum (CCEA) option
IC/AT rated (optional, 16W only)
Title 24 Compliant (see ordering page for options that apply)
Damp location
Wet location option

Warranty
5 year limited warranty

Emergency Battery Pack (EM)
Powers fixture at 5.1 watts (approx. 400 Lm) for 90 minutes (not for use with REM, CP or IC/AT versions)

Application Data:

Notes and Definitions:
Beam spread is to 50% center beam candlepower (CBCP).
D=Distance to floor or wall.
FC=Footcandles on floor or wall at center beam aiming location.
L=Effective Visual Beam length in feet (50% of maximum footcandle level).
W=Effective Visual Beam width in feet (50% of maximum footcandle level).
CB=Distance across or down to center beam location.

Hornet® HP

Square Lensed Downlight/Wall Wash

amerlux
A Delta Group Company

PROJECT: **TYPE:**

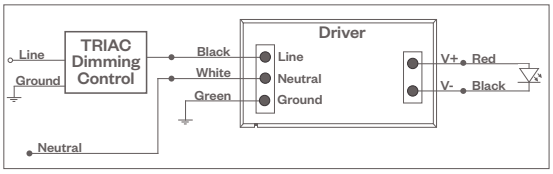
DIMMING COMPATIBILITY:
Amerlux® Hornet fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

TRIAC (Forward Phase) DIMMING (Standard)
Utilizes standard TRIAC dimmers that are in wide use in installations across the US. Best for retrofit applications where TRIAC dimmers are installed.

Notes:
- 120VAC or 277VAC*
- Dims down to 5% light output (most cases)
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!
- Must meet dimmer Minimum Load Requirements per dimming manufacturer

TRIAC Wiring Diagram



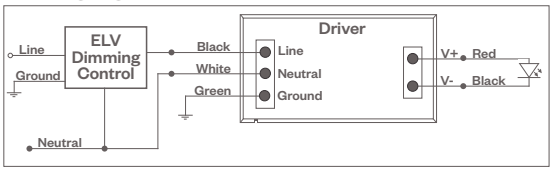
Compatible Dimmers†:

Wall Box (TRIAC 120VAC)	**Central System**
Lutron "Diva"	Lutron "GP" Panel
Lutron "Nova-T"	Lutron Grafik Eye QS
Lutron "Maestro"	
Lutron "Vareo"	
Lutron "Skylark"	

ELV - Electronic Low Voltage (Reverse Phase) DIMMING (Standard)
Utilizes specialized "ELV" dimmers.

Notes:
- 120VAC or 277VAC*
- Dims down to 5% light output (most cases)
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!
- Must meet dimmer Minimum Load Requirements

ELV Wiring Diagram



Compatible Dimmers†:

Wall Box (ELV 120VAC)	**Wall Box** (ELV 277VAC)	**Central System**
Lutron "Diva"	Leviton Revoir II AWSMT-E	Lutron "GP" Panel with PHPM-PA 120/277VAC
Lutron "Nova-T"		Lutron Grafik Eye QS with PHPM-PA 120/277VAC
Lutron "Maestro"		
Lutron "Vareo"		
Lutron "Skylark"		
Leviton "Surslide"		
Leviton "Vizio"		

Notes:
* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer manufacturer installation instructions for 277VAC wiring diagrams.
† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

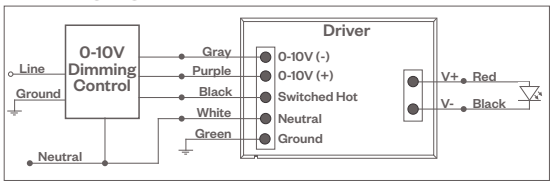
0-10V DIMMING

Integrates into a variety of building management and daylighting controls

Notes:
- 120VAC or 277VAC*
- Dims down to 1% light output
- Requires interface to turn off power to driver
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

0-10V Wiring Diagram



Compatible Dimmers†:

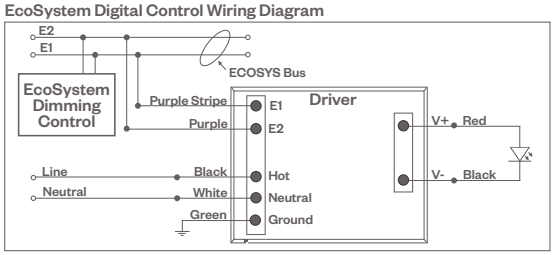
Wall Box		Central System
Lutron "Diva" - DVTV with PP-120H Interface	Leviton Renoir II 0-10V	Lutron Grafik Eye with GRX-TVI Interface

LUTRON H-SERIES / ECOSYSTEM DIMMING

Integrates into Lutron EcoSystem building management

Notes:
- 120VAC or 277VAC*
- Dims down to 1% light output
- EcoSystem Control
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

HILUME-H-ECO, HILUME-5-ECO
EcoSystem Digital Control Wiring Diagram



Compatible Dimmers†:

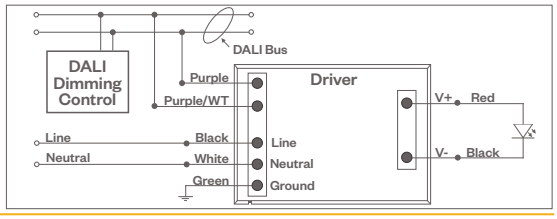
Lutron ECO System	Central System
Pow Pak Dimming Modules	Lutron EcoSystem compatible controls
Energi Savr Node	
Grafik Eye QS/Homeworks	
QS Control Unit	
Quantum Hub	
Homeworks QS/My Room	

DALI DIMMING

Digital control protocol allows individual fixture control

Notes:
- 120VAC - 277VAC*
- Dims down to 1% light output in most cases

DALI Wiring Diagram



Compatible Dimmers†:

Wall Box (3-Wire Fluorescent)	Central System
Leviton CD250 Controller	Dynalite
	Fifth Light

Notes:

Human Centric Tunable Fixtures

High Efficiency

AVAILABLE SHAPES

CIRCLE OVAL SQUARE RECTANGLE TRIANGLE

Features

HOUSING
- Die- formed pure aluminum sheet
- Exotic clad metal housing available - consult factory

FINISH
- Powder coat white standard
- RAL color options available

REMOTE DRIVER SYSTEM

- **Standard 0-10V:** 120-277VAC, 0-10V Dims to Dark (1%), Class II/B, THD < 10%, PF > 0.95. Programmable in 1mA increments up to 96W.
- **Analog Tunable White:** 120-277VAC, Dual 0-10V channels for both intensity and color (CCT) tunning. Class II/B, THD < 10%, PF > 0.95. Programmable in 1mA increments up to 50W.
- **DALI:** 120-277VAC, Dims to Dark (1%), Class II/B, THD < 10%, PF > 0.95. Programmable in 1mA increments up to 96W.
- **DMX:** 120-277VAC, Dims over DMX, Class II/B, THD < 10%, PF > 0.95. Programmable in 25mA increments up to 96W. Up to 4 Channel DMX.

OPTICS
Aluminum frame with polyvinyl diffusing membrane with integrated optic modules.

REFLECTOR
97% reflective white finish, die-formed aluminum

OPTIONS
- 90-Minute Emergency battery pack with test switch
- Acoustic dampening tiles

SOURCE
- Custom binned 2 SDCM color binning for ultra consistent, uniform distribution
- Available in 2700k,3000k, 3500k, 4000k, 5000k, + Dynamic White 2700-6000k
- Dynamic white standard control over 0-10V wires.
- DMX options available - consult factory

CERTIFICATIONS
- IBEW (local 3) Union-Made in the USA
- UL Listed, Damp Location.
- Wet location options available - consult factory.

MOUNTING OPTIONS
- Surface
- Gypsum mud-in
- Gyp Flange
- Pendant
- 9/16" T grid
- 9/16" Tegular

OUTPUT
- Low Output - 2W/170LM/SF
- Standard - 4W/340LM/SF
- High Output - 6W/510LM/SF
- Ultra - 8.4W/700LM/SF
- Higher outputs available. Consult Factory.

Grüv® 1.5”

Recessed Linear LED

amerlux
A Delta Group Company

Features

Prized for classic good looks, performance and flexibility, Grüv has taken a turn for the edgy. This Bauhaus-influenced family of linear LEDs has just expanded–by getting smaller. The Grüv 1.5" LED can climb walls, cross ceilings, literally go everywhere your design wants it to be. Get into Grüv. Perfect linear design, every time.

Product Overview

Type:	Recessed Direct Lens, Asymmetric, Grazer & Straight Blade Louver	
Wattage:	5W/ft, 10W/ft (other wattages availavle see p2)	
Color Temp:	2700K, 3000K, 3500K, 4000K; Tunable White (2700K-5700K)	
CRI:	83 or 90+ typ. (2700K, 3000K, 3500K, 4000K) 90+ (Tunable White)	
Dimming (wired):	Static White 0-10V, 1% dimming (standard) Lutron Hi-lume® EcoSystem, 1% dim, fade to off DALI dimming, 1% dim	Tunable White 0-10V TW, 1% dimming DALI DT8, 1% digital dimming Lutron T Series 1% dimming
Dimming (wireless):	Enlighted Sensor Lutron Athena (integral wireless RF node)	Enlighted Sensor TW Lutron Athena TW (integral wireless RF node)

				HW	120/277				

1 Model
GRUV1.5-FLG-A16† - exposed flange
GRUV1.5-FLG-GRID-A16† - exposed flange, grid mount
GRUV1.5-FR-GRID-A16† - regressed lens grid
GRUV1.5-GB-A16† - gyp board trimless mud-in
GRUV1.5-GRID-A16† - grid mount
GRUV1.5-IS-A16† - independently suspended, millwork
GRUV1.5-J/GB-A16† - j-mold/gyp board trimless
GRUV1.5-J/GRID-A16† - j-mold/grid
GRUV1.5-J/IS-A16† - j-mold/independently suspended

2 Optics
PL - performance lens (standard)
SLDW - straight blade louver (wh) solid blades w/overlay
SLDB - straight blade louver (blk) solid blades w/overlay
SLDS - straight blade louver (slv) solid blades w/overlay
ASY - asymmetric lens (not for FR version)
GRZ - grazer lens (suggest cove installation, see page 7)
DRP1 - 1" drop lens

3 Wattage (per foot)
Standard:
5 - 5W/ft
10 - 10W/ft
Optional:
3 - 3W/ft (4' minimum length required)
4 - 4W/ft (4' minimum length required), DLC listed *(see additional notes below)*
6 - 6W/ft
7 - 7W/ft
8 - 8W/ft
9 - 9W/ft

4 Color Temp-CRI

Static White:

27 - 2700K-83	**279** - 2700K-90+	
30 - 3000K-83	**309** - 3000K-90+	
35 - 3500K-83	**359** - 3500K-90+	
40 - 4000K-83	**409** - 4000K-90+	

Tunable White:
TW9-2757 - tunable white, 90 CRI (2700K-5700K)

5 Finish
HW - high reflectance matte white

6 Voltage
120/277

7 Length

(Length A)	(Length B)	Length C)
Length A (used for) - all patterns - IND/IND-S+ - CON/CON-S+ - CUS	Length B (used for) - all patterns - PR - 2 lengths of 2	Length C (used for) - PU - PZ

8 Configuration
IND[1] - individual fixture, 2' to 8' in 1' increments
IND-S+ - individual with standard plus (see pg8, for GRID or J/GRID only)
CON - continuous run > than 8', specify to nearest foot
CON-S+ - continuous run with standard plus (see pg8, for GRID or J/GRID only)
CUS - custom made to measure, +/- 1/8" of customer supplied field dimensions
Standard Patterns *(see page 8 for details)*:
PLL - L left, (2) straights + (1) 90° corner, leg right
PLR - L right, (2) straights + (1) 90° corner, leg left
PU - U shape, (3) straight lengths + (2) 90° corners
PR - Rectangle, (4) straight lengths + (4) 90° corners
PZ - Z shape, (3) straight lengths + (2) 90° corners
PWC - wall to ceiling (1) 90° Corner joining 2 segments
Custom Patterns:
PC - please provide drawings and consult factory

9 Drivers/Controls
Wired - Static White:
0-10V - 1% analogue dimming, 120-277VAC, Dim to off when selected with wireless dimming control
HILUME-H-ECO - Lutron "H" Series, 1% dim, fade to off, EcoSystem
DALI - DALI Dimming 120-277VAC, 1% dim
Wired - Tunable White:
0-10V TW - 1% dimming , multi-volt (120V-277V) constant current
DALI DT8 - 1% digital dimming, CCT control per DALI DT8, (120V-277V) constant current
Lutron T - Lutron T Series, digital link 1% dimming, (120V-277V)
Wireless - Static White:
ENLS-SR - Enlighted sensor, energy metering (not available w/Gruv 1.5 FR)
ENLS-010 - Enlighted sensor with controller unit (not available w/Gruv 1.5 FR)
AWNR-WH-SR - Lutron Athena wireless node, RF only, white
AWNR-BL-SR - Lutron Athena wireless node, RF only, black
AWNR-WH-010 - Lutron Athena wireless node, RF only, white
AWNR-BL-010 - Lutron Athena wireless node, RF only, black
Wireless - Tunable White:
ENLS-SR-TW - Enlighted sensor, energy metering (not available w/Gruv 1.5 FR)
AWNR-WH-SR-TW - Lutron Athena wireless node, RF only, white
AWNR-BL-SR-TW - Lutron Athena wireless node, RF only, black

10 Options/Accessories
CP - Chicago Plenum (CCEA)
WHIP - 6' whip, 18/5 conductor
EMC-PF[2] - emergency circuit requires power feed located in last fixture section (for other locations consult factory)
PF[2] - Extra power feed for additional circuiting
EMB - emergency battery pack (not available for lengths under 4')

DLC listed (4W fixture in 4', 5', 6', 7', 8' and runs to the neares whole foot)
1 - Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
2 - Not available with IND (individual) configuration.
† The "A" refers to the sequential revision in a year and "XX" refers to the year of update. Updates coincide with improved performance while not changing the overall fixture aesthetic and are reflected in the published performance data. Please contact your Amerlux representative for explanations of changes.

PROJECT: **TYPE:**

Specifications

Application
Commercial and retail recessed ambient lighting can be customized with made to measure lengths, patterns, ceilings or wall mounted fixtures.

Construction
One piece extruded aluminum housing and trim. Die-formed, cold-rolled steel internal components and external mounting brackets. Numerous configurations accommodate most architectural ceiling conditions.

Optical
All lenses are snap-in, extruded acrylic, with a maximum length of 8'. Fixtures shipped with lenses installed. Amerlux's proprietary acrylic lens provides excellent transmission while effectively concealing source image. All louvers are retained with spring clips attached to louver side rails, for good fit and retention.
PL - Performance Lens provides high efficiency with greater lens surface brightness.
SLD - Straight blade Louver Direct has ½" high blades ½" on center with overlay.
ASY - Asymmetric 20° throw lens is backed high diffusion film that eliminates striations.
GRZ - Grazer lens for highlighting wall surfaces. Suggest cove installation. No overlay is used to enhance grazing performance. (see page 7)
DRP1 - 1" Drop lens with illuminated end caps

LED
Amerlux's boards and patented connector design with brand name LEDs enables Amerlux fixtures to have excellent thermal management and offer a 5 year warranty. Our LED binning is within 3 MacAdam ellipse. Boards are configured for maximum flexibility resulting in even illumination no matter the fixture layout. LED boards are easily replaced in the field with just a Phillips screw driver.

	Static White	Tunable White
CCT:	2700K, 3000K, 3500K, 4000K	2700K-5700K
CRI:	83 or 90+ typical	90+ (92 typ)
R9:	16 @ CRI 83; >50 @ CRI 90+	>50

Life: 50,000+ hr., > 70% of initial lumens (L70)

Electrical
Wiring: Supply wires are easily accessible through access plate on top of fixture.
WHIP: Optional factory installed 6' Greenfield whip (18/5 conductor) simplifies installation.
Standard Wattage: 5W/ft, 10W/ft.
Optional Wattages: 3W/ft, 4W/ft, 6W/ft, 7W/ft, 8W/ft, 9W/ft. (3W & 4W have a minimum length of 4'). For other wattages consult factory.
Emergency circuit via remote inverter or auxiliary emergency power supply (by others).
This product complies with IEEE C62.41 for surge endurance up to 2.5KV. Amerlux® recommends using additional surge protection with this unit (supplied by others), surge damage is not covered under warranty.
EMC-PF - Emergency circuit requires power feed wire harness to be located in last fixture section for continuous runs. For other locations consult factory. Not available for individual (IND) configuration.
PF - Extra power feed wire harness for additional circuiting. Not available for individual (IND) configuration.

Finish
HW - High reflectance, matte white powder coat paint. Baked on finish for maximum durability and color stability.

Configurations/Lengths
IND - Individual fixtures are made of single standard lengths of 2 ft to 8 ft (in 1' increments). These are stand alone fixtures with matching End Caps, supplied with the mounting hardware. Lengths less than 4' may have restrictions based upon wattage, lengths, drivers or other options.
CON - Continuous runs, > 8', specified to nearest whole foot length in 1' increments. Runs made from standard lengths have End Caps at the beginning and end of run. Runs > 60' may require second power feed. Each housing has factory installed alignment pins. Mating fixtures are easily aligned and joined with "catch and latch" mechanisms out of sight, on top of the Housing. Wiring is made fast and positive with molded quick connectors.
S+ - Standard Plus is a field cuttable filler bracket that can be used when an Individual fixture or a Continuous run isn't to the nearest foot (+3/4" to 6" max per end). *See page 8 for details.*
CUS - Custom made to measure runs are made to nearest 1/8"of customer supplied field measurements or drawings. Custom lengths use the same hardware for hairline joining.
PXX - Standard Patterns consist of 90° corners with standard lengths (4' to 8' in 1' increments), continuous runs or made to measure lengths. Depending upon complexity of the pattern drawings may be required from the customer. If ordering please give overall lengths.
A'-B'-PLL - L Left - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PLR - L Right - (1) 90° Corner 2 segments. Specify overall segments: A' & B'
A'-B'-PR - Rectangle - (4) 90° Corners joining 4 segments. Specify overall segments: A' & B'
A'-B'-C'-PU - U shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-C'-PZ - Z shape - (2) 90° Corners joining 3 segments. Specify overall segments: A', B', & C'
A'-B'-PWC - Wall to Ceiling - 90° joining bracket. Specify overall segments: A' & B'
See page 8 for layouts.
PC - Custom Patterns may use standard lengths, Made To Measure, 90° or other corners (some limitations). Please provide drawing and consult factory.
Please note: Corners have lit mitered Lens.

Mounting
Intended for use in gypsum board, 9/16" Tee grid and Screw Slot, and millwork ceilings. Wall mounting J-Molding details available. For individual, continuous row, or pattern applications.
***Please note* - fixtures to be installed before gypsum board ceiling.**
GRUV1.5-FLG-A16 - exposed flange, fixture into gyp board ceiling
GRUV1.5-FLG-GRID-A16 - exposed flange grid mount, fixture into 9/16" Tee ceiling
GRUV1.5-FR-GRID-A16 - regressed lens grid, in 9/16" Screw Slot or Flat Tee ceilings (compatible with 4" TechZone™ & other 4" wide architectural ceiling systems)
GRUV1.5-GB-A16 - gyp trimless mud, fixture plastered into gypsum board ceiling
GRUV1.5-GRID-A16 - grid mount, in 9/16" Screw Slot or Flat Tee ceilings
GRUV1.5-IS-A16 -independently suspended, fixture in wood ceiling
GRUV1.5-J/GB-A16 - J mold/gyp trimless, plastered in ceiling - J Channel wall side
GRUV1.5-J/GRID-A16 - J mold/grid, in 9/16" Screw Slot or Flat Tee ceilings - J Channel wall side
GRUV1.5-J-IS-A16 - J mold/independently suspended in ceiling - J Channel wall side

Options
EMB - Emergency battery pack - 10W output power, 90 min of illumination time, up to 1300 lm of initial light output. Illuminated test-switch/charging indicator light is provided. Wattage consumption by EM: 2.5W/ft (4ft fixture), 1.66W/ft (6ft fixture), 1.25W/ft (8ft fixture). Request can be made to light up 4ft section on 8ft unit.

Certifications
Approved to UL standards for damp locations as tested by CSA.
Intended for indoor use only
Chicago Plenum (CCEA) optional.
IC rated

Warranty
Amerlux's 5 year limited warranty. Please consult Amerlux website for details.

PROJECT: **TYPE:**

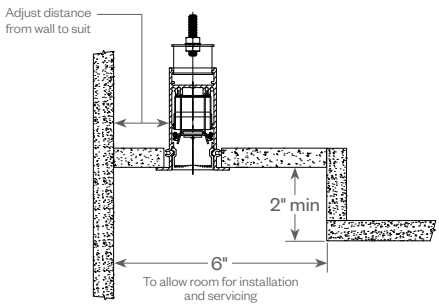
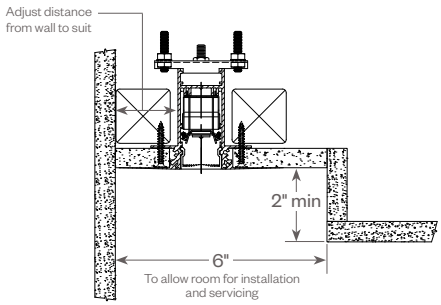
GRAZER LENS OPTIONS:

The Grazer Lens for the Gruv 1.5 was created to provide an effective and low cost wall grazing lighting tool. A cove or valance is suggested to block direct glare at mid to high angles. Surface mounting requires the housing to be attached to the structure above. Some fixture disassembly and reassembly required.

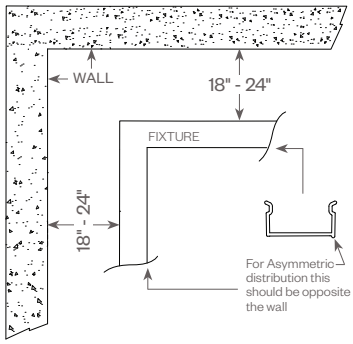
GRÜV1.5-FLG-GRZ (exposed flange)



GRÜV1.5-GB-GRZ (gyp board trimless mud-in)



ASYMMETRIC LENS OPTION:



NOTE: Not available for GRUV1.5-FR-GRID

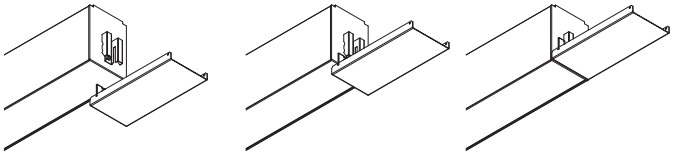
PROJECT: **TYPE:**

STANDARD PLUS

STANDARD PLUS (FILLER):

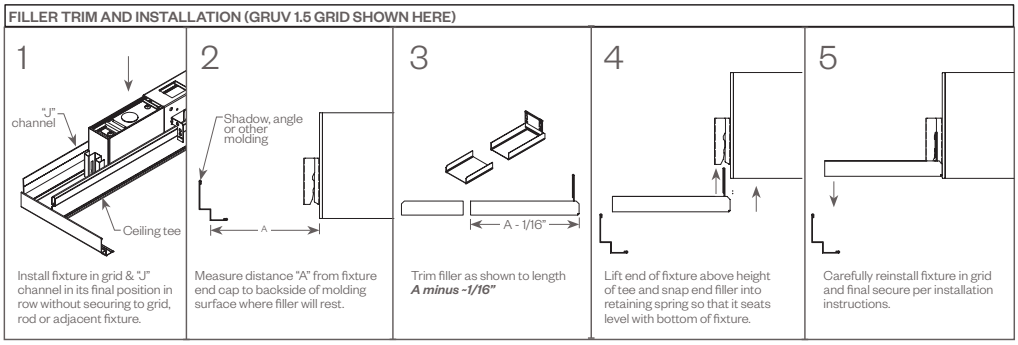
Whenever a continuous run is less than a foot to the next full foot length consider ordering Standard Plus field cuttable bracket for a perfect look. Fits 9/16" Slot Grid and 9/16" T grid. It snaps in place easily from below and gets you close to the wall with a standard fixture. Saves time and money compared to made-to-measure. (max length: 6")

GRID VERSION



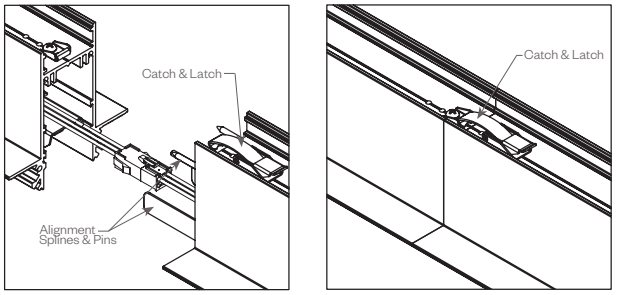
NOTE: Use with Gruv1.5-Grid and Gruv1.5-J/Grid

FILLER TRIM AND INSTALLATION (GRUV 1.5 GRID SHOWN HERE)



TOOLLESS JOINING:

Line up the two housings by using the alignment splines & pins. Secure them together by using the Catch & Latch System on the top of the extrusion.



OPTIONAL SENSOR/RF NODE:

Amerlux® has partnered with control companies to create building environments that are safer, and smarter, than ever before. At the heart of our partnership is intelligent RF nodes and Smart Sensor, the most advanced digital wireless communication and sensors available today. Integrated into Amerlux products.

Minimum run length is 3' for wireless sensor and RF node.

TYPE: KH

UHNJ - EMERGENCY DEPARTMENT EXPANSION

Kugler Ning Lighting

Grüv® 1.5”

Recessed Linear LED

amerlux
A Delta Group Company

PROJECT: **TYPE:**

STATIC WHITE - DIMMING COMPATIBILITY:
Amerlux® Gruv fixtures are compatible with all major dimming protocols prevalent in the United States. Please see below for general compatibilities and wiring diagrams. Amerlux recommends testing your unique dimming configuration as the exact full configuration (Dimmer, Fixture Quantity, Voltage, etc) may affect dimming performance.

--- NOTE: INFORMATION BELOW IS FOR WIRED DIMMERS ONLY. FOR WIRELESS DIMMERS, CONSULT FACTORY ---

0-10V - DIMMING (Standard)

Integrates into a variety of building management and daylighting controls

Notes:

- 120V or 277V*
- Dims down to 1% light output
- Requires interface to turn off power to driver
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

Compatible Dimmers†:

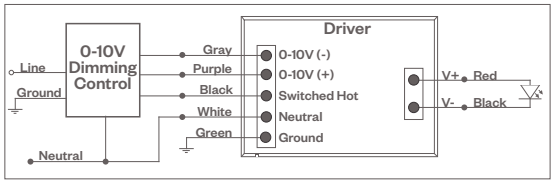
Wall Box

Lutron:	Wattstopper:	Leviton:
Diva - DVSTV	ADF-120277	Renoir II
Maestro - MS-Z101		
Nova-T - NTSTV-DV		

Center System

Lutron Grafixk Eye with GRX-TV1 Interface

0-10V Wiring Diagram



LUTRON HI-LUME ECOSYSTEM DIMMING

Integrates into Lutron EcoSystem building management

Notes:

- 120VAC or 277VAC*
- Dims down to 1% light output
- EcoSystem Control
- Consult Dimming manufacturer for installation instructions - DO NOT SHARE NEUTRALS!

Compatible Dimmers†:

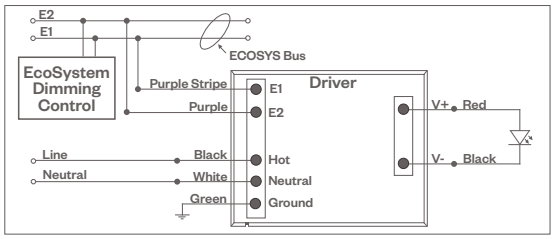
Lutron ECO System

Pow Pak Dimming Modules
Energi Savr Node
Grafik Eye QS/Homeworks
QS Control Unit
Quantum Hub
Homeworks QS/My Room

Central System

Lutron EcoSystem compatible controls

HILUME-H-ECO EcoSystem Digital Control Wiring Diagram



Notes:

* Driver is 277VAC dimmable with appropriate dimmer (by others). All provided wiring diagrams show 120VAC wiring colors and method. Please refer to 277VAC dimmer installation instructions for 277VAC wiring diagrams.

† The absence of a dimmer from the lists above does not imply incompatibility. Please consult factory for compatibility inquiries.

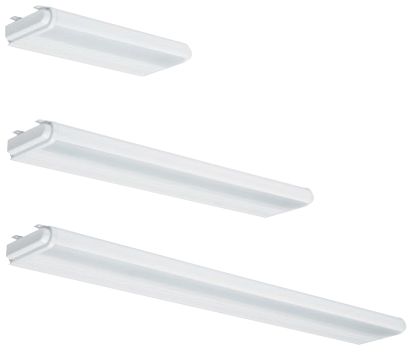
Day-Brite CFI by signify

Linear

LINCS LED undercabinet

10", 19", or 28" lengths



Project:
Location:
Cat.No:
Type:
Lamps: Qty:
Notes:

Day-Brite / CFI LINCS LED undercabinets enable flexibility to suit the needs of many applications including office, healthcare, educational, and residential. The state of the art LED system provides high resolution lighting with excellent color rendering for high visual acuity on the task plane. The modular design allows field application of control options and continuous connectivity for ease of configuration and installation. LINCS LED is an ideal choice where high performing undercabinet lighting is specified.

Ordering guide

Example: LINCS100EL28935UNVWHGDIM

Family	Length	Color	Voltage	Finish	Driver	Options
LINCS100E						
LINCS100E LINCS LED Energy Star	**L10** 10" **L19** 19" **L28** 28"	**930** 3000K, 90 CRI **935** 3500K, 90 CRI	**UNV** Universal Voltage 120-277V **120** 120V **277** 277V	**WHG** White Glossy **MB** Matte Black **SA** Satin Aluminum **SWH** Antimicrobial White	**DIM** Trailing edge phase dimming (ELV)	**CSJT3**[1,2] SJT cord set hard-wired into back of fixture. UL listed as a portable fixture for use in office workstations (120V only) **OSC**[3,4] Integral occupancy sensor control for UNV linking **OSHL**[3,4] Integral occupancy sensor control for UNV, hard wired **RSW**[4,5] Rocker switch (on/off) for linked input power, controls only this fixture **RSLL**[4,5] Rocker switch for hard linked input power, controls fixtures in the linked circuit **RSH**[4,5] Rocker switch for hard wired input power, controls only this fixture **RSHL**[4,5] Rocker swtich for hard wired input power, controls fixtures in linked circuit **SBF** Slow blow fuse

Accessories (order separately)

Specify Qty of Connectors Needed

QTY:	**LINCS1001**[6]	Wiring module
QTY:	**LINCS1001RSW**[6]	Wiring module with rocker switch
QTY:	**LINCS1002CO**[2,6]	Wiring module with duplex outlet
QTY:	**LINCS100PC3W**	3' Straight power cord, white
QTY:	**LINCS100PC6W**	6' Straight power cord, white
QTY:	**LINCS100ICSW**	6" Straight interconnect cord, white

Note: Power cords plug into left end of the luminaires.

Notes

1. LINCS fixtures with CSJT3 option can not be modularly connected.
2. 120V only.
3. OSC is not available with LINCS100EL10.
4. See controls table page 3.
5. Specify 120V or 277V only.
6. Specify voltage and finish for these accessories. Include voltage and finish codes from catalog matrix after "1" or "2", i.e. LINCS1001120WHGRSW.

SEE FIXTURE SCHEDULE FOR CATALOG NUMBER AND DESCRIPTION

TYPE: KJ

Kugler Ning Lighting

LINCS100E LINCS LED undercabinet

10", 19", or 28" lengths

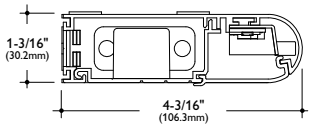
Features

- Miniature 1" deep profile
- Modular design with accommodating accessories for ease of installation and flexibility in the field.
- Optional wiring module with master on/off switch, duplex convenience outlet, or occupancy sensor
- Extruded aluminum design is durable, lightweight and corrosion resistant
- Available in a white, black, satin aluminum, or anitmicrobial white

Specifications

- **Construction:** .060" extruded aluminum housing with injection molded polycarbonate endcaps and covers.
- **Reflector and Lens:** Acrylic textured lens to minimize lamp image on task surface.
- **Finish:** LINCS is available in either a white or black polyester powder-coat paint finish. In addition, LINCS can be selected with an anodized satin aluminum finish. Standard white painted and antimicrobial finishes have matching white end caps. Black endcaps are provided with the black painted or satin aluminum finishes.
- **Lamps:** LINCS is supplied with high efficiency LEDs with a color temperature of 3000K or 3500K and 90 CRI. 70% of initial illumination at 50,000 hours at 25°C ambient. The LED board is field replaceable.
- **Listings:** cETLus Listed for direct-wire or portable installations. Damp rated. Energy Star® certified.
- **Electrical:** Luminaires are supplied with an integral, electronic Class "A" LED driver for 120V to 277V applications. Optional passive infrared occupancy sensor control (OSC) available.
- **Installation:** LINCS include male and female grounded connectors on each end to allow power conductivity with linking connector cord accessories. A UL recognized 3/8" flexible metal conduit/non-metallic sheathed wiring connector is supplied with the luminaire for direct-wiring into knockout in the back of the housing or through adapter plate at the left end. LINCS100-L19 and LINCS100-L28 models have a wiring access panel with a knockout to allow quick wiring of the first luminaire without opening the wireway cover. For portable installations, the LINCS100PC power cord plugs directly into the left end of the luminaire. It is not recommended that LINCS be plugged into a GFCI receptacle.
- **Warranty:** All luminaire components (except for the LED board and driver) are warranted against defects during the life of the original installation. The LED board and driver are warranted for 5 years from date of manufacture. Visit www.philips.com/warranties for complete warranty information.

Dimensional Data



Installation Notes:

- (1) End-plate supplied to allow direct wiring into left end
- When row mounting, allow 1" at end of a run connection of last fixture
- When using power cord, allow 3" at start of run
- Subract 7/16" for each end-cover removed in row mount applications.

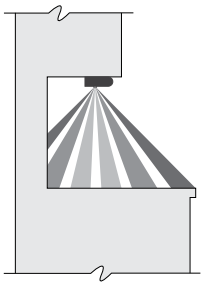
Controls

				Control		
Option Code	**Description**	**Voltage**	**Wiring Type**	**Single Fixture**	**All In Circuit**	**Linked Thru Power**
OSC (standard)	Integral Occ Sensor - Linked Input Power, Linked Control	UNV	Linked		X	X
OSHL	Integral Occ Sensor - Hard Wired Power, Linked Control	UNV	Hard Wired		X	X
RSW (standard)	Rocker Switch - Linked Input Power	120V or 277V	Linked	X		X
RSLL	Rocker Switch - Linked Input Power, Linked Control	120V or 277V	Linked		X	X
RSH	Rocker Switch - Hard Wired Power	120V or 277V	Hard Wired	X		X
RSHL	Rocker Switch - Hard Wired Power, Linked Control	120V or 277V	Hard Wired		X	X

Wiring Type Describes whether power is linked to the left side of the fixture, or direct wired to the back of the fixture.
Control - Single Fixture The integrated device controls only this single fixture.
Control - All in Circuit The integrated device controls this fixture and all adjacent fixtures (i.e. the thru power is controlled from this fixture).
Linked Thru Power Power is linked to adjacent fixtures via the LINCS connectors.



Integral occupancy sensor control (OSC)

The OSC has a passive infrared occupancy (PIR) that has a field-adjustable time delay that that can be set for 30 sec., 10 min., 20 min., or 30 min. Connect building power to the LINCS luminaire with the OSC. All additional luminaires interconnected to that luminaire will be controlled by the single OSC.

LINCS LED 28" 3500K

LER – 88

Catalog No. LINCS100E-L28-935-UNV-WHG-DIM
Test No. 35775
S/MH 1.2
Lamp Type LED
Lumens 627
Input Watts 7

Comparative yearly lighting energy cost per 1000 lumens – **$2.73** based on 3000 hrs. and **$.08** pwr KWH.

The photometric results were obtained in the Day-Brite laboratory which is NVLAP accredited by the National Institute of Standards and Technology.

Photometric values based on test performed in compliance with LM-79.

UHNJ - EMERGENCY DEPARTMENT EXPANSION

Day-Brite CFI by Signify

Recessed

FluxPanel LED gen 2 2x2

Up to 5400 lumens

Day-Brite/CFI FluxPanel LED gen 2 recessed is a highly versatile luminaire designed to provide smooth lighting gradient on the lens surface and ease of installation. Available for use in recessed, suspended, and surface mount orientation, FluxPanel is ideal for general lighting applications such as open office, schools, healthcare, clean rooms, and retail.

Footnotes

1 Integral control options dimmable to 1% via wireless wall switch. Non-controls options are 0-10V dimmable to 1% for Standard configurations and 5% for Base configurations.
2 All options only available with Standard configurations.
3 XDIM is 120V only.
4 Specify DIM driver option only.
5 Not available with 347V option.
6 Available in 30L through 54L packages.
7 Not available with surface or suspended accessories.
8 Maximum of 4 luminaires per controller.
9 Emergency and Control options not clean room certified.
10 Must order IRT9015 Interact commissioning remote with each system order.
11 Must be installed in conjunction with a UL1008 device.
12 Must be ordered with an integral controls option.
13 Failure to properly select the "BAC" suffix could result in you receiving product that is not BAA compliant product with no recourse for an RMA or refund. This BAC designation hereunder does not address (i) the applicability of, or availability of a waiver under, the Trade Agreements Act, or (ii) the "Buy America" domestic content requirements imposed on states, localities, and other non-federal entities as a condition of receiving funds administered by the Department of Transportation or other federal agencies.
14 Consult Signify to confirm whether specific accessories are BAA-compliant.

Accessories[14] (order separately)

- **FMA22 –** 2'x2' "F" mounting frame for NEMA "F" mounting
- **FSK22 –** 2'x2' surface mount field installation kit (factory welded seams)
- **FSF22 –** 2'x2' surface mount field assembly kit (field assembled)
- **FPZCH48-1D-SC-UNV –** adjustable cable hanger kit with straight white 18/5 cord for dimming (two-1 powered, 1 non-powered)
- **FPZCH48-1D-SC-347 –** adjustable cable hanger kit with straight white 18/5 cord for dimming (two-1 powered, 1 non-powered)
- **SWZDT[1,7,8,9] –** SpaceWise wireless controller with daylighting and occupancy, advanced grouping with dwell time functionality (compatible with all 0-10V options, see SWZDT spec sheet)
- **SBAZ10-CS[1,7,8,9,10] –** Interact Ready System Bridge Accessory, refer to Philips System Bridge Accessory specification sheet for options and ordering details
- **IRT9015 –** handheld remote for grouping and configuration (at least one remote required for any SWZCS installation).

TYPE: KK, KK1, KK2

Kugler Ning Lighting

2FPZ FluxPanel LED recessed 2x2

Up to 5400 lumens

Application

- Base configurations are 1 9/16". Standard configurations are 3 " Dimensions stated for overall depth, including driver box.
- Even distribution of light on the lens provides exceptionally low glare gradient minimizing distractions at the ceiling plane.
- General light distribution creates uniform horizontal and vertical illuminance on the work plane and limits scalloping on the walls.
- Excellent consistency of correlated color temperature (CCT) per ANSI C78.377.
- CRI 80 minimum color rendering with balanced spectrum.
- Designed for use with standard Grid (NEMA "G") or Narrow Grid (NEMA "NFG") ceiling T-bars. Drywall or plaster application require use with the FMA22 "F" mounting frame accessory (sold and shipped separately).
- Accessory field install kits available for surface (FSF22) and suspended (FPZCH48) mounting.

Construction/Finish

- Die formed galvanized steel housing.
- Extruded aluminum frame post painted with gloss white enamel finish. Corners are precision welded for seamless aesthetic.
- Emergency options available with factory installed battery pack and remote field installed test switch/ light with cover plate.
- Die formed driver box with standard access plate for ease of wiring, provides tool-free access to driver(s) from above.
- Back lit LED arrays with optics provide highlyefficient and unpixilated transfer of light tothe diffuser.
- Integral clips accommodate definitive attachment to T-bar grid for recessed applications.
- Die formed surface box accessory kit post painted gloss white enamel.

Enclosure

- Diffuser provides visual comfort and high efficiency.
- Flat opal lens is easy to clean and provides a uniform aesthetic on the ceiling plane.
- Tight enclosure assembly impedes ingress of dust and insects.

Electrical

- Up to 130 lm/W efficacy.
- High efficiency Advance driver featuring high power factor (>0.90), 120-277V 60/50Hz, and less than 15% THD.
- Minimum start temperature -20°C (-4°F).
- Standard configurations are 0-10V dimming to 1%. Base configurations are to 5%.
- To predict lumen output in emergency mode,multiply emergency pack wattage by luminiare efficacy, then by 1.10. Typical lumen output is 1200lm for BSL10LST, and 850lm for BSL6LST.
- Electromagnetic interference (EMI) compliant to FCC Title 47 Part 15 class A.
- Flicker and stroboscopic effect compliant to NEMA 77-2017.
- TM-21 predicted L70 lumen maintenance up to 90,000 hours per LED manufacturer LM-80 report.
- cULus (Base) or cETLus (Standard) listed to UL and CSA standards, suitable for damp locations.
- Rated for clean room use - meets ISO14644-1 Class 5-9 (equivalent to Federal Standard No. 209E Class 100-100,000)
- Base and Standard configurations are IC rated.
- FluxPanel luminaires are Designlights Consortium® Standard and Premium qualified. Please see the DLC QPL list for exact catalog numbers (www.designlights.org/QPL).

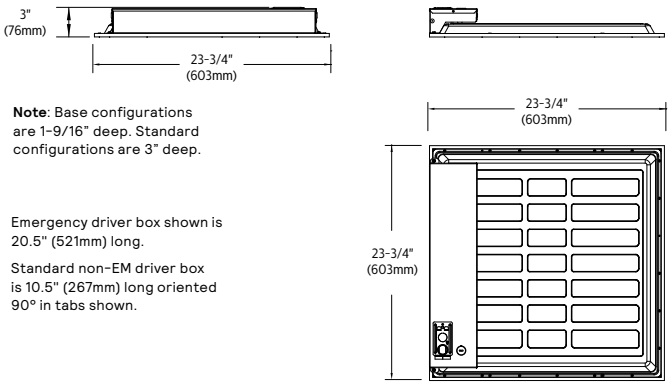
General Notes

- All options factory installed.
- All accessories are field installed.
- Many luminaire components, such as reflectors, refractors, lenses, sockets, lampholders, and LEDs are made from various types of plastics which can be adversely affected by airborne contaminants. If sulfur based chemicals, petroleum based products, cleaning solutions, or other contaminants are expected in the intended area of use, consult factory for compatibility.
- Five year limited luminaire warranty includes LED boards and driver. Visit www.signify.com/warranties for complete warranty information.

Energy data

Luminaire	Catalog Number	Input Power	Efficacy	DLC
2x2 Standard	2FPZ20L840	16	127	Premium
	2FPZ30L840	23	129	Premium
	2FPZ38L840	34	129	Premium
	2FPZ45L840	36	128	Premium
2x2 Base	2FPZ38B840	33	119	Standard

Dimensions



Note: Base configurations are 1-9/16" deep. Standard configurations are 3" deep.

Emergency driver box shown is 20.5" (521mm) long.

Standard non-EM driver box is 10.5" (267mm) long oriented 90° in tabs shown.

Kugler Ning Lighting

2FPZ FluxPanel LED recessed 2x2

Up to 5400 lumens

Wireless Controls Options

SpaceWise DT (SWZDT)

- Standalone daylight and occupancy sensing with advanced grouping, wireless mesh networking and dwell time.
- Commissioning via compatible Android phone and Philips Field App
- Dimming via compatible Zigbee wireless wall switch only (see link below for details)
- Register for the commissioning app at http://registration.componentcloud.philips.com/appregistration/
- Integral sensing options may not be combined
- For more information including recommended switches, refer to the following: –

  SWZDT – www.usa.lighting.philips.com/systems/lighting-systems/spacewise

Emergency Options (ER100)

- Power Sensing (Factory default) – Recommended UL924 option requires unswitched power sense line, absence of voltage on the normal circuit triggers luminaire to 100% output
- Power Interruption Detection (Field option) – Detects AC power interruption >30ms triggers 90 minute emergency mode with luminaire at 100% output

Interact Pro scalable sensor for Foundation, Advanced & Enterprise tiers (SWZCS and an evolution of SpaceWise)

- SWZCS is a connected sensor with integral occupancy and daylight sensing and supports wireless mesh connectivity.
- The sensor works in the Foundation mode (similar to SpaceWise) when configured without a gateway or in an Interact Pro Advanced or Enterprise mode if a compatible gateway is used.
- Interact Pro includes an App, a portal and a broad portfolio of wireless luminaires, lamps and retrofit kits all working on the same system.
- Startup is implemented via Interact Pro App (Android or iPhone) & BlueTooth connectivity. The App provides flexibility to choose between a gateway or non gateway mode for setup.
- Setup with the gateway requires wired internet access to the gateway. It is possible to add a gateway at a later point.
- Prepare project configuration steps remotely and use IRT9015 remote onsite to identify and group devices together.
  - Compatible with:
    - SWS200 wireless scene switch
    - Battery powered IP42 presence sensor OCC sensor IA CM WH 10/1
    - Battery powered IP42 presence & daylight sensor OCC-DL sensor IA CM IP42 WH
    - LCN3110: Battery powered IP65 presence sensor, OCC sensor IA CM IP65WH
    - LCN3120: Battery powered IP65 presence & daylight sensor, OCC-DL sensor IA CM IP65 WH
  - For more information on Interact Pro visit: www.interact-lighting.com/interactproscalablesystem

Radio only sensor (RADIO)

- Integral RADIO only sensor simply enables wireless mesh connectivity to the luminaire without any occupancy or daylight sensing.
- Ideal for applications where sensing functionality is managed by other Interact devices and the luminaire only needs to have wireless connectivity.

Luminaires for Surgical Applications

M4DL4 SERIES

PROJECT INFORMATION

Job Name _____

Fixture Type _____

Catalog Number _____

Approved by _____

PRODUCT FEATURES:

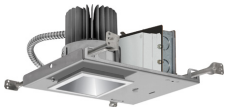
» 4" sealed, recessed downlight with round or square aperture

» Conducted emissions controlled as per MIL-STD-461G

» Delivered lumens: 983 - 2,640 lm

» 1% Dimming via 0-10V or DALI control

Round



Square

SPECIFICATIONS

HEAT SINK: Die-cast aluminum with external radial fins for natural convection.

ROUGH-IN FRAME: 18-gauge die-formed, corrosion-resistant steel. Vertically adjustable collar accommodates ceiling thicknesses up to 2", adjustable post-installation. Adjustable mounting bars for installation with wood and steel frame joists and T-grid ceiling systems spaced up to 24" on center. Quick-access junction box accessible post-installation from above and below ceiling. Includes (5) 1/2" knock-outs to allow straight conduit runs.

TRIM/HOUSING SECTION: IP-rated housing section incorporates the heat sink, LED module, optics and lower trim. Regressed lens trim is secured to the Rough-In frame with hidden torsion springs. Anti-microbial finish standard on all exposed painted surfaces.

OPTICAL: High-Efficiency mixing chamber design with regressed diffused acrylic lens producing uniform light output.Round or square aperture. Available with various reflector finishes. See Reflector Finish Ordering Information for available options.

ELECTRICAL: LED array available in multiple CCT and CRI combinations with a maximum 3-step MacAdam variation allowance. See Trim Ordering Information for available options. 120-277VAC or 347VAC, 50/60Hz electrical input with serviceable constant current driver (<20% THD, >0.90 PF). Minimum 85% driver efficiency. Standard 0-10V dimming with 1-100% range and dim-to-dark capabilities (non dim-to-dark with 347V); 165µA maximum source current. Optional eldoLED ECOdrive DALI driver with 1-100% range.

PHOTOMETRICS: Photometry tested to the IESNA LM-79-08 standard by an ILAC/ISO17025 accredited laboratory. For photometric information, go to www.kenall.com.

WARRANTY: Limited five (5) year LED warranty.

LISTINGS: Luminaire is certified to UL standards by Intertek Testing Laboratory for non-IC and Wet Location installations. IP64 rating per IEC60598. NSF2 Splash/Non-Food Zone. Conducted emissions controlled as per MIL-STD-461G. Optional CCEA compliant.

MEDMASTER® SAFESLOT™

Luminaires for Behavioral Health Applications

BHRS4 SERIES

PROJECT INFORMATION

Job Name _____

Fixture Type _____

Catalog Number _____

Approved by _____

PRODUCT FEATURES:

» 4" recessed linear slot luminaire in multiple lengths

» Single-function luminaire provides ambient lighting within the patient room

» Symmetric and 10° asymmetric optical distribution options

» One-piece doorframe with continuous lens retention and tamper-resistant fasteners

» High-output, high-CRI LED lamp sources

SPECIFICATIONS

HOUSING: Extruded 6063-T5 aluminum construction with aluminum endcaps. Low-gloss anti-microbial white TGIC polyester powder-coat finish with five-stage pre-treatment applied to exterior, room-side components.

DOORFRAME: One-piece extruded 6063-T5 aluminum outer frame with low-gloss anti-microbial white TGIC polyester powder-coat finish with five-stage pre-treatment. Inner aluminum extrusion continuously bonds lens to door. Closed-cell gasketing. Tamper-resistant T20 TORX fasteners secure doorframe to housing.

OPTIC: Symmetric (Lambertian) or 10° asymmetric distribution option. Diffused polycarbonate lens with 0.188" overall thickness.

LED MODULE: Serviceable mid-power LED array. Minimum 82 CRI standard (R9>20). See Ordering Information for available color temperature options.

DRIVER: 120-277VAC or 347VAC, 50/60Hz electrical input with serviceable constant-current driver (<20% THD, >0.90 PF). Minimum 85% driver efficiency. Standard 0-10V dimming with 1-100% range and dim-to-dark capabilities (non dim-to-dark with 347V); maximum 330 µA maximum source current. Optional eldoLED ECOdrive DALI drivers with 1-100% range.

INSTALLATION: Suitable for Type-IC recessed ceiling installation into 9/16" and 15/16" lay-in and tegular grid ceilings, flanged drywall ceilings and trimless mud-in installations with 5/8" drywall. See Ordering Information for selection. Suitable for 0°C - 40°C ambient temperature environments.

PHOTOMETRICS: Photometry tested to the IESNA LM-79-08 standard by an ILAC/ISO17025 accredited laboratory. For detailed photometric information, please visit www.kenall.com.

WARRANTY: Limited five (5) year warranty.

LISTINGS: Luminaire is certified to UL standards by Intertek Testing Laboratories for Type-IC and Wet Location installations. IP65 rating per IEC60598. NSF2 Splash/Non-Food Zone rated. Standard CCEA compliance.

KIRLIN HEALTHCARE LIGHTING

INFRALED® PRO 35

PRO-12035

Recessed Aimable LED Exam Light for Emergency, Patient Room, & ICU

Luminaire Specifications (see page 4 for Controls Specifications)

Luminaires are sold individually, and include the following standard features:

- OPTeCOLOR™ LEDs: 95+ CRI, high R9 (72), R13 (96), R15 (96), cool beam, 60,000 hour life (L70). Cyanosis Observation Index of 2.7 meets AS/NZS 1680.2.5
- Blue LED indicator strip designates luminaire under active control
- BioGard™ anti-microbial white finish, regressed flare trim with tempered clear flat glass lens
- IP66 rated, sealed and gasketed trim
- Perforation-free, rust and corrosion proof aluminum housing (exceeds 1000hr ASTM salt spray test)
- Up to 35° tilt (from nadir)
- Up to 4,090 fc (44,024 lux) on task
- 0-10V CCR 100-1% dimming
- Input voltage: 110 - 277V
- Serviceable through aperture; convenient plug-in components for easy installation and service
- Lightweight 18.5 lbs; complies with OSHPD seismic requirements with addition of safety wires (by others)
- System wattage 54.1W (per luminaire)
- 5 year warranty

KIRLIN HEALTHCARE LIGHTING

INFRALED® PRO 35

PRO-12035

Recessed Aimable LED Exam Light for Emergency, Patient Room, & ICU

INFRALED® PRO 35 is controlled via wall control panel and optional remote control. Each controller supports up to 4 luminaires from the INFRALED® PRO family. Each wall control panel includes an infrared sensor. An optional ceiling-mounted infrared sensor is also available. All wall controls, remote controls, and remote sensors must be ordered separately.

Wall Control Panel (PRO-WALLC) Required

- Full function controls for power, fixture selection, intensity and direction
- Tactile-membranes and smooth surfaces for easy cleaning with isopropyl alcohol and disinfecting agents
- May be located outside of patient room or in a secure remote location. If remote control use is anticipated, add **PRO-SENSR** option, see below
- Includes infrared receiver for remote control operation
- Magnetic docking station for remote control
- Back box provided by Kirlin
- Add option **-ACH** (Alternative channel) on wall control when adding an additional wall control in the same room
- 5 year warranty

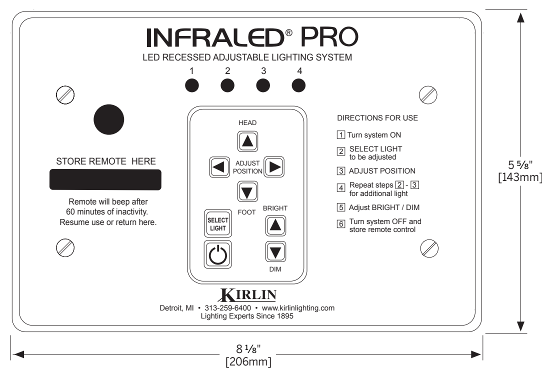
Remote Control (PRO-REMOT)

- Full function controls for power, fixture selection, intensity and direction
- Convenient one hand operation
- Tactile-membranes and smooth surfaces for easy cleaning with isopropyl alcohol and disinfecting agents
- Invisible infrared signal will not interfere with other equipment in the room
- Impact resistant construction
- Loss deterring beeper to remind user to return remote to docking station. Beeper is activated if remote control is not used for, nor returned to dock within 1 hour
- “Write-on” area for marking room number
- 2-AA batteries provided
- Low stand-by current assures long battery life
- Add option **-ACH** (alternative channel) on remote control when adding an additional remote/wall control in the same room
- Add option **-BI** (beeper inactive) when wishing to add a silence function to the remote
- Add **PRO-SENSR** (below) when wall control is located outside of patient room or obstructed from remote control’s IR signal
- 1 year warranty

Remote Sensor (PRO-SENSR)

- Optional ceiling mounted infrared sensor enhances signal reception if wall control panel is obstructed
- Each PRO-WALLC supports one PRO-SENSR
- 5 year warranty

Wall Control Panel (PRO-WALLC)



Remote Control (PRO-REMOT)

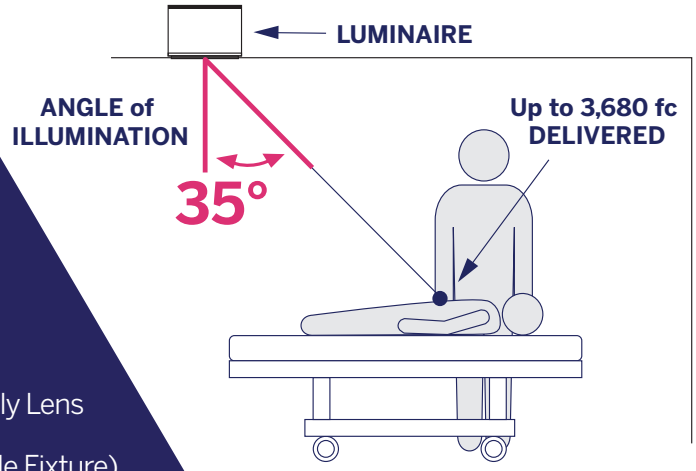
INFRALED® PRO 35V
BEHAVIORAL EXAM

Catalog#: **PRV-12035**

Job Name: Type:

Vandal/Ligature Resistant Recessed Aimable LED Exam Light for Behavioral Health

- 35° Tilt, 360° Rotation
- Fully Recessed System
- Ultimate Infection Control
- Cool LED Beams, 95+ CRI
- Wall and Remote Controlled
- Adjustable Direction & Intensity
- IK10 Impact Resistant Trim with Poly Lens
- 3680 fc (39,620 lux) on Task (Single Fixture)



INFRALED® PRO
Configurable remote-aimable lighting system for healthcare applications

60	**PRO 60** High-angle exam light with 60° beam for Childbirth & Surgery
45	**PRO 45** 19" exam light with 45° beam for OR, Hybrid OR, & Cath Lab
35	**PRO 35/PRO 35V** 12" exam light with 35° beam for ICU, Patient Room, ED, & Behavioral
25	**PRO 25** 9" exam light with 25° beam for NICU, ICU, & Patient Room

KIRLIN HEALTHCARE LIGHTING

INFRALED® PRO 35V BEHAVIORAL EXAM

PRV-12035

Vandal/Ligature Resistant Recessed Aimable LED Exam Light for Behavioral Health

Luminaire Specifications (see page 4 for Controls Specifications)

Luminaires are sold individually, and include the following standard features:

- OPTeCOLOR™ LEDs: 95+ CRI, high R9 (72), R13 (96), R15 (96), cool beam, 60,000 hour life (L70). Cyanosis Observation Index of 2.7 meets AS/NZS 1680.2.5
- BioGard™ anti-microbial white finish, regressed flare trim with clear flat poly lens
- IK10 impact resistant design with 0.22" polycarbonate lens and tamper-proof hardware
- Perforation-free, rust and corrosion proof aluminum housing (exceeds 1000hr ASTM salt spray test)
- Optional IP65-rated sealed and gasketed trim: stops migration of contaminants
- Up to 35° tilt (from nadir)
- Up to 3,680 fc (39,620 lux) on task
- 0-10V CCR 100-1% dimming
- Input voltage: 110 - 277V
- Serviceable through aperture; convenient plug-in components for easy installation and service
- Lightweight 19 lbs; complies with OSHPD seismic requirements with addition of safety wires (by others)
- System wattage 54.1W (per luminaire)
- 5 year warranty

KIRLIN HEALTHCARE LIGHTING

INFRALED® PRO 35V
BEHAVIORAL EXAM
PRV-12035

Vandal/Ligature Resistant Recessed Aimable LED Exam Light for Behavioral Health

INFRALED® PRO 35V is controlled via wall control panel and optional remote control. Each controller supports up to 4 luminaires. Each wall control panel includes an infrared sensor. An optional vandal resistant ceiling-mounted infrared sensor is also available. All wall controls, remote controls, and remote sensors must be ordered separately.

Wall Control Panel (PRO-WALLC) Required

- Full function controls for power, fixture selection, intensity and direction
- Tactile-membranes and smooth surfaces for easy cleaning with isopropyl alcohol and disinfecting agents
- May be located outside of patient room or in a secure remote location.
- Includes infrared receiver for remote control operation
- Magnetic docking station for remote control
- Back box provided by Kirlin
- Add option **-ACH** (Alternative channel) on wall control when adding an additional wall control in the same room
- 5 year warranty

Remote Control (PRO-REMOT)

- Full function controls for power, fixture selection, intensity and direction
- Convenient one hand operation
- Tactile-membranes and smooth surfaces for easy cleaning with isopropyl alcohol and disinfecting agents
- Invisible infrared signal will not interfere with other equipment in the room
- Impact resistant construction
- Loss deterring beeper to remind user to return remote to docking station. Beeper is activated if remote control is not used for, nor returned to dock within 1 hour
- "Write-on" area for marking room number
- 2-AA batteries provided
- Low stand-by current assures long battery life
- Add option **-ACH** (alternative channel) on remote control when adding an additional remote/wall control in the same room
- Add option **-BI** (beeper inactive) when wishing to add a silence function to the remote
- Add **PRV-SENSR** (below) when wall control is located outside of patient room or obstructed from remote control's IR signal
- 1 year warranty

Remote Sensor (PRV-SENSR)

- Vandal-resistant ceiling mounted infrared sensor enhances remote control signal: Required if wall control panel is remotely located or is obstructed and remote control is being used. Optional under all other conditions.
- Beveled round flat plate with BioGard™ antimicrobial white finish and tamperproof hardware.
- Each PRO-WALLC supports one PRV-SENSR
- 5 year warranty

FSS FluxStream strip	**2** 2'	**20L** 2000 **30L** 3000	**830** 80 CRI, 3000K **835** 80 CRI, 3500K **840** 80 CRI, 4000K **850**[3] 80 CRI, 5000K	**UNV** Universal voltage 120-277V **120**[4] 120V **277**[4] 277V **347**[5] 347V	**DIM**[11] Dimming **SDIM**[6,7] Step dimming to 40% input power **XDIM**[4,6,7] MarkX phase dimming **DALI**[8] DALI	**EMLED**[5,6,9] Factory wired Bodine BSL310LP integral emergency pack. Nominal 1100lm **ER100**[12,13,17] UL924 listed bypass sensor relay, factory installed between driver & sensor PS/PI (Interact Pro compatible) **ER100/HVPS**[12,13,17] UL924 listed sensor bypass relay, factory installed between driver & sensor for 347/480 Power Sense (Interact Pro compatible) **ER100/HVPI**[12,13,17] UL924 listed sensor bypass relay, factory installed between driver & sensor 347/480 Power Interrupt (Interact Pro compatible) **GTD/E**[12] UL924 listed Bodine GTD factory installed on driver input **GTD/SNSR**[12,13] UL924 listed Bodine GTD factory installed between driver & sensor (alternate option to ER100) **SWZCS**[10,15] Interact Pro scalable sensor with integral daylight & occupancy sensing, advanced grouping with dwell time **SWZDT**[10] SpaceWise sensor, daylighting and occupancy, advanced grouping, with dwell time **RADIO**[10] Integral Interact Pro RF sensor, enables wireless connected lighting control **SWZCSH**[14] Interact Pro scalable high bay sensor with integral daylight & occupancy sensing, advanced grouping with dwell time for high mounting heights **IAOSB**[10,15] Interact Pro wireless sensor with occupancy, daylight, and environmental sensing capabilities **LSXR10** 120-347V motion sensor, factory installed on end cap **LSXR10ADC**[10] 120-347V motion sensor with photocell and hi/lo trim dimming, factory installed on end cap **PAF** Paint after fabrication for extra corrosion resistance (white) **BK** Matte black paint color **ST** Satin aluminum paint color **BAC**[18] Meets the requirements of the Buy American Act of 1933 (BAA)
	3 3'	**30L** 3000				
	4 4'	**30L** 3000 **40L** 4000 **55L** 5500 **70L** 7000				
	8[1] 8'	**60L** 6000 **80L** 8000 **110L** 11000 **140L** 14000				

Other lumen packages may be ordered in increments of 500lm from 3000 to 7000 lumens for 4' unit and increments of 1000lm from 6000 to 14000 lumens for 8' unit.

Ordering guide – PoE controls example: FSS440L840-LV-POE-IAO

Series	Length (nominal)	Lumens[2] (nominal)	Color temp. (K)	Voltage	Driver	Options
FSS			–	LV –	POE –	
FSS FluxStream Strip	**4** 4'	**30L** 3000 **40L** 4000 **60L** 6000	**830** 80 CRI, 3000K **835** 80 CRI, 3500K **840** 80 CRI, 4000K **850** 80 CRI, 5000K	**LV** Low voltage	**POE** Power over ethernet	**IAO** Interact PoE daylighting and occupancy sensor, enables wired connected lighting control **EMPOE**[16] 600lm integral emergency driver and battery pack. **PAF** Paint after fabrication for extra corrosion resistance (white) **BK** Matte black paint color **ST** Satin aluminum paint color **IAOSB** Interact Pro wireless sensor with occupancy, daylight, and environmental sensing capabilities
	8[16] 8'	**60L** 6000				

1 8' is tandem (2) 4' lenses with single piece 8' body.
2 Nominal delivered lumens at 25°C ambient.
3 Not available in 3' model.
4 XDIM option only available with 120V.
5 347V with EMLED only available in 8' models.
6 Not available in 2' or 3' model.
7 Not available in 4' 70L model or 8' 140L model.
8 DALI available up to 80L models only, consult factory for other options.
9 EMLED on 8' models illuminates 4' section in emergency mode.
10 Available with DIM driver option only.
11 Integral controls options dimmable to 5% via wireless wall switch. Non-integral controls configurations are 0-10V dimmable to 1%.
12 Must be installed in conjunction with a UL1008 device.
13 Only ordered with an Interact integral sensing option.
14 High bay motion detector. Motion sensing zone is extremely limited if used below 15' mounting height.
15 Must order IRT9015 Interact commissioning remote with each system order.
16 EMLED on 8' models illuminates 4' section in emergency mode.
17 ER100 options not available in 2', 3' only has availability when selecting UNV.
18 Failure to properly select the "BAC" suffix could result in you receiving product that is not BAA compliant product with no recourse for an RMA or refund. This BAC designation hereunder does not address (i) the applicability of, or availability of a waiver under, the Trade Agreements Act, or (ii) the "Buy America" domestic content requirements imposed on states, localities, and other non-federal entities as a condition of receiving funds administered by the Department of Transportation or other federal agencies.
19 Consult Signify to confirm whether specific accessories are BAA-compliant.

Accessories[19] (order separately)

- **FSSD2L** – 2' Diffuse replacement lens
- **FSSD3L** – 3' Diffuse replacement lens
- **FSSD4L** – 4' Diffuse replacement lens (order two for 8' models)
- **FSSWG4** – 4' wire guard (order two for 8' models)
- **FSTH** – Sliding hanger bracket (set of two)
- **LSXR10** – Low bay PIR motion sensor, 120-277V (not available with PoE)
- **LSXR10ADC** – Low bay PIR motion sensor with photocell and hi/lo trim dimming, 120-277V (not available with PoE)
- **FSSDEK** – Decorative plastic end cap (set of two)

(See last page for details and more options)

SWZCS accessories[19] (order separately)

- **IRT9015** – handheld remote for grouping and configuration(at least one remote required for any SWZCS installation).

General notes

Many luminaire components, such as reflectors, refractors, lenses, sockets, lampholders, and LEDs are made from various types of plastics which can be adversely affected by airborne contaminants. If sulfur based chemicals, petroleum based products, cleaning solutions, or other contaminants are expected in the intended area of use, consult factory for compatibility.

PAF (Paint after fabrication) option is required for all products that will be used in a damp or humid location, such as under a canopy or covered parking area.

Not all product variations listed on this page are DLC qualified. To ensure that a specific model is qualified, visit www.designlights.org/search

interact ready.

SEE FIXTURE SCHEDULE FOR CATALOG NUMBER AND DESCRIPTION

TYPE: KQ

Kugler Ning Lighting

FSS FluxStream LED strip

2', 3', 4' and 8'

Features

- Compact design for installation in tight spaces.
- Frosted acrylic diffuser provides wide light distribution and superior glare control.
- Diffuser and LED plate snap into place allowing tool-free access to LED boards and driver.
- 2', 3', 4' and 8' tandem lengths available to accommodate many field applications.
- Up to 100,000 hour predicted L70 LED lumen maintenance provides long service life to reduce maintenance costs.
- Can be surface mounted on ceilings or walls, or suspended via chain, pendants or cables.
- Wall mountable - ADA compliant.
- Ideal for cold applications (-20°C).
- Continuous row mounting using standard end caps. No extra parts needed.
- 7/8" knock out provided at each end and on base of luminaire. Note: Center knockout is covered and not useable in 4' version with EMLED option.
- Multiple driver options available with 0-10V as standard.
- Enclosed lens minimizes penetration of dust, insects, and other debris into the LED compartment.
- 8' tandem unit is two 4' optical assemblies with a center mullion on a single full length chassis.
- Integral controls options include sensor mounted in control module extension mounted on fixture end (see dimension drawing).
- Fluxstream luminaires are Designlights Consortium® qualifed. Please see the DLC QPL list for exact catalog numbers www.designlights.org/QPL.
- 5 year manufacturer's limited warranty. Visit signify.com/warranties for complete warranty information.

Finish

- Baked white acrylic matte high reflectance paint finish.
- PAF (Paint after fabrication) option, which is required for all products that will be used in damp or humid locations, such as a canopy or covered parking area, provides extra corrosion resistance.

Shielding

- Contoured frosted acrylic lens.

Electrical

- LED boards and drivers are RoHS (Restriction of Hazardous Substances) compliant. Total system life rated at 50,000 hours. Predicted L70 lifetime based on LED manufacturer's supplied LM-80 data and in-situ laboratory testing.
- Integral emergency driver with EMLED option. To estimate lumen output in emergency mode, multiply emergency pack wattage by efficacy, then by 1.10.
- The GTD/E option is used to bypass wall switches and allow luminaire operation on auxiliary power. Generator transfer requires installation in conjunction with a UL1008 listed device.
- The GTD/SNSR option is used to bypass integrated sensor control in the event of utility power loss. Generator transfer requires installation in conjunction with a UL1008 listed device.

Materials

- Heavy gauge cold rolled steel housing, LED plate, and end caps.

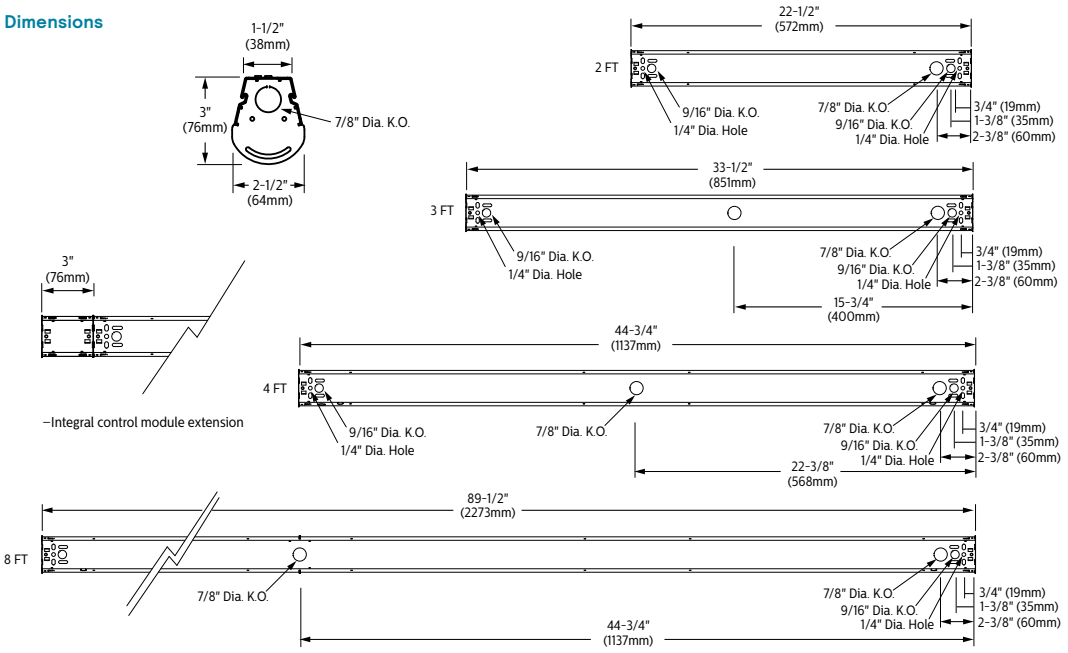
Labels

- cETLus listed.
- Suitable for damp locations.

Ambient temperature data

Configuration	Ambient
FSS470L	-20°C to 30°C
FSS8110L	-20°C to 35°C
FSS8140L	-20°C to 25°C
EMLED option	Minimum 0°C
All others	-20°C to 40°C

Dimensions



SEE FIXTURE SCHEDULE FOR CATALOG NUMBER AND DESCRIPTION

TYPE: KQ

Kugler Ning Lighting

FSS FluxStream LED strip

2', 3', 4' and 8'

Wireless Controls Options

SpaceWise DT (SWZDT)

- Standalone daylight and occupancy sensing with advanced grouping, wireless mesh networking and dwell time.
- Commissioning via compatible Android phone and Philips Field App
- Dimming via compatible Zigbee wireless wall switch only (see link below for details)
- Register for the commissioning app at http://registration.componentcloud.philips.com/appregistration/
- Integral sensing options may not be combined
- For more information including recommended switches, refer to the following: –

SWZDT – www.usa.lighting.philips.com/systems/lighting-systems/spacewise

Emergency Options (ER100)

- Power Sensing (Factory default) – Recommended UL924 option requires unswitched power sense line, absence of voltage on the normal circuit triggers luminaire to 100% output
- Power Interruption Detection (Field option) – Detects AC power interruption >30ms triggers 90 minute emergency mode with luminaire at 100% output
- 347V requires step-down transformer and must be ordered indicating Power Sensing or Power Interruption Detection.

FluxStream strip shown with integral sensor

Interact Pro scalable sensor for Foundation, Advanced & Enterprise tiers (SWZCS/SWZCSH and an evolution of SpaceWise)

- SWZCS/SWZCSH is a connected sensor with integral occupancy and daylight sensing and supports wireless mesh connectivity.
- The sensor works in the Foundation mode (similar to SpaceWise) when configured without a gateway or in an Interact Pro Advanced or Enterprise mode if a compatible gateway is used.
- Interact Pro includes an App, a portal and a broad portfolio of wireless luminaires, lamps and retrofit kits all working on the same system.
- Startup is implemented via Interact Pro App (Android or iPhone) & BlueTooth connectivity. The App provides flexibility to choose between a gateway or non gateway mode for setup.
- Setup with the gateway requires wired internet access to the gateway. It is possible to add a gateway at a later point.
- Prepare project configuration steps remotely and use IRT9015 remote onsite to identify and group devices together.
  - Compatible with:
    - SWS200 wireless scene switch
    - Battery powered IP42 presence sensor OCC sensor IA CM WH 10/1
    - Battery powered IP42 presence & daylight sensor OCC-DL sensor IA CM IP42 WH
    - LCN3110: Battery powered IP65 presence sensor, OCC sensor IA CM IP65WH
    - LCN3120: Battery powered IP65 presence & daylight sensor, OCC-DL sensor IA CM IP65 WH
- For more information on Interact Pro visit: www.interact-lighting.com/interactproscalablesystem

Radio only sensor (RADIO)

- Integral RADIO only sensor simply enables wireless mesh connectivity to the luminaire without any occupancy or daylight sensing.
- Ideal for applications where sensing functionality is managed by other Interact devices and the luminaire only needs to have wireless connectivity.

Interact Pro scalable sensor bundles for Enterprise tier

- IAOSB option in addition to occupancy and daylight sensing supports advanced IoT capabilities such as people estimation analysis, desk level temperature & humidity sensing, noise classification, and BLE beacon.
- Compatible with SWS200 wireless scene switch and Interact Ready wireless battery powered sensors.
- Use Interact software and insights to increase building efficiency, achieve building wide integration and optimize space through occupancy analytics.
- Requires compatible Gateway and internet connectivity for commissioning.
- For more information, visit: www.interact-lighting.com/office or www.usa.lighting.philips.com/systems/system-areas/offices

Wired Controls Options

Interact PoE

- PoE based IoT connected lighting solution for large enterprises that span across multiple floors, buildings and require multiple gateways.
- Use Interact software and insights to increase building efficiency, achieve building wide integration and optimize space through occupancy analytics.
- IAOSB option in addition to occupancy and daylight sensing supports advanced IoT capabilities such as people estimation analysis, desk level temperature & humidity sensing, noise classification, and BLE beacon.
- PoE lighting controller is accessible from below.
- Integral sensor option for occupancy sensing (PIR) and/or daylight harvesting available for additional energy savings.
- Optional integral emergency controller and battery pack provides 600lm nominal output. Test switch and indicator light mounted on side of chassis on one end.
- Emergency battery has a 3 month pre-installed shelf life, and must be stored and installed in environments of 20C to 30C (-4F to 86F) ambient, and 45-85% relative humidity.
- For more information, visit: www.interact-lighting.com/office or www.usa.lighting.philips.com/systems/system-areas/offices

Accessories[19]

Accessory Catalog Code	Description	
FSTH	Sliding hanger bracket (pair)	
SV5F12	12" Stem and canopy kit	White stem and canopy kit, 1/4" trade size (1/2" O.D.) locknuts included. Works with 9/16" k.O. on base of housing.
SV5F18	18" Stem and canopy kit	
SV5F24	24" Stem and canopy kit	
SV5F36	36" Stem and canopy kit	
SV5F48	48" Stem and canopy kit	
FKR-126	Chain hanger set (pair)	Includes two 5' heavy duty link chains with "V" hooks. Attaches to base of housing.
DACHxx	Adjustable cable hanger kit (single)	Works with 1/4" hole on base of housing or FSTH hanger bracket. **xx**=cable length in inches, enter 48" to 180" lengths in 12" increments
DACHxx-1-SC	Adjustable cable hanger kit with white straight 18/3 cord (single)	
DACHxx-1-CC	Adjustable cable hanger kit with white coiled 18/3 cord (single)	
DACHxx-2-SC	Adjustable cable hanger kit with white straight 18/4 cord (single)	
DACHxx-2-CC	Adjustable cable hanger kit with white coiled 18/4 cord (single)	
DACHxx-1D-SC	Adjustable cable hanger kit with white straight 18/5 cord with dimming leads (single)	
LSXR10	Low bay pir motion sensor (120-277v)	
LSXR10ADC	Low bay pir motion sensor with photocell and hi/lo trim dimming (120-277v)	
FSSWG4	4' Wire guard (order two for 8' models)	
FSSD2L	2' Diffuse replacement lens	
FSSD3L	3' Diffuse replacement lens	
FSSD4L	4' Diffuse replacement lens (order two for 8' models)	
FSSDEK	Decorative plastic end cap (set of two)

SECTION 265100
INTERIOR LIGHTING

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Interior luminaires.

B. Exit signs.

C. Drivers.

D. Light Source (Lamps/Modules).

E. Accessories.

1.02 RELATED REQUIREMENTS

A. Section 260529 - Hangers and Supports for Electrical Systems.

B. Section 260533.16 - Boxes for Electrical Systems.

C. Section 260547/260548 - Vibration and Seismic Controls for Electrical Systems.

D. Section 260553 - Identification for Electrical Systems: Identification products and requirements.

E. Section 260923 - Lighting Control Devices.

1.03 REFERENCE STANDARDS

A. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

B. IES LM-63 - Approved Method: IES Standard File Format for the Electronic Transfer of Photometric Data and Related Information 2019.

C. IES LM-79 - Approved Method: Optical and Electrical Measurements of Solid-State Lighting Products 2019.

D. IES LM-80 - Approved Method: Measuring Maintenance of Light Output Characteristics of Solid-State Light Sources 2021.

E. NECA 1 - Standard for Good Workmanship in Electrical Construction 2015.

F. NECA/IESNA 500 - Standard for Installing Indoor Lighting Systems 2006.

G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

I. UL 924 - Emergency Lighting and Power Equipment Current Edition, Including All Revisions.

J. UL 1598 - Luminaires Current Edition, Including All Revisions.

K. UL 8750 - Light Emitting Diode (LED) Equipment for Use in Lighting Products Current Edition, Including All Revisions.

1.04 DEFINITIONS

A. CCT: Correlated color temperature.

B. CRI: Color-rendering index.

C. Chromaticity: The property of color of light defined by the dominant or complementary wavelength and purity aspects of the color taken together.

D. Emergency Lighting Batteries: Integral battery mounted within normal use luminaire or dedicated emergency on only luminaire with light source.

E. Junction Box: Outlet Box

F. L80: The extrapolated life in hours of the luminaire when the luminous output depreciates 20 percent from initial values.

G. LED: Light Emitting Diode
H. LED Light Source: Integral LED luminous component in the form of boards or modules.
I. LER: Luminaire efficacy rating.
J. Lumen: Measured output of lamp and luminaire, or both.
K. Luminaire (Fixture): Complete lighting fixture, including driver.
L. MacAdam: Shape on the CIE chromaticity diagram that illustrates how much one can “stray” from the target before perceiving a difference from the target color
M. NEMA: National Electrical Manufacturers Association
N. SSL: Solid State Lighting
O. THD: Total Harmonic Distortion - The amount of higher frequency power on the power line.

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
1. Luminaires, drivers, lamps and other components meet or exceed the requirements of all applicable federal, state, and/or municipal energy codes.
2. Coordinate LEDs, light sources, drivers, lamps, dimming ballasts with lighting control systems. Before ordering any equipment, verify with manufacturers that proposed drivers are compatible with proposed lighting controls, and that proposed LEDs, light sources, or lamps are compatible with proposed drivers.
3. Coordinate the installation of luminaires with mounting surfaces installed under other sections or by others. Coordinate the work with placement of supports, anchors, etc. required for mounting. Coordinate compatibility of luminaires and associated trims with mounting surfaces at installed locations.
4. Coordinate the placement of luminaires with structural members, ductwork, piping, equipment, diffusers, fire suppression system components, and other potential conflicts installed under other sections or by others.
5. Coordinate the placement of exit signs with furniture, equipment, signage or other potential obstructions to visibility installed under other sections or by others.
6. Notify Architect and lighting designer of any conflicts or deviations from Contract Documents to obtain direction prior to proceeding with work.

1.06 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.
B. Submittals shall be provided a minimum of 12 weeks prior to commencement of luminaire installation unless otherwise approved. Failure to submit within the deadline constitutes a guarantee that only the base specified products will be supplied and that no other products, whether listed as alternates or not, will be installed.
C. Submittals or shop drawings lacking sufficient detail to indicate clear and complete compliance with specifications shall be rejected.
D. "Approved Equal" specification status does not and shall not exempt the identified manufacturers from full and complete compliance with all criteria identified either in the specifications or as attributed to "prime specification" equipment with regards to photometric performance, brightness control, size, finishes, credentials or experience, etc. Consideration, acceptance or rejection of any proposed submittal at any time shall rest solely upon the evaluation of the Lighting Designer for those areas within the project scope.
E. Shop Drawings:
1. Provide plans, elevations, sections, details, and attachment to other work.
2. Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
3. Submit project-specific, factory-produced shop drawings for linear luminaires mounted in continuous rows. Drawings shall show housing lengths, light source layout, joiners, lens seams, supports, endcaps, corners, and unlighted end sections as applicable for all

unique row lengths, suspension installation hardware or components.

4. All continuous-run luminaire lengths, whether straight or curvilinear, shall be fabricated based upon field verified dimensions only.

F. Substitutions:
   1. Subject to compliance with project requirements, luminaires that may be incorporated into the Work include, but are not limited to, the products specified in the Luminaire Schedule included on the drawings.
      a. Where three or more manufacturers are indicated for each luminaire type, no other manufacturers will be considered.
      b. Where one manufacturer is indicated for each luminaire type, other manufacturers will be considered only if the engineer, architect, or lighting consultant can determine that the proposed equipment is equal to the specified equipment. A maximum of one (1) submission of substitutions for lighting fixtures will be accepted, after which time luminaires must be submitted as specified.
      c. Where a design series number is listed in the Light Fixture Schedule (as opposed to a complete cataloge number), the listed manufacturer shall comply with all of the requirements contained in the construction documents, even if they do not offer a standard project which meets all of these requirements. It is the responsibility of the contractor for work of this section to insure that their price includes only products which comply with all project requirements.
   2. Where owners provided standard products are specified, no substitutions will be considered.
   3. Provide photometric calculations where luminaires are proposed for substitution upon request.

G. Product Data:
   1. For all luminaires and lamps, provide manufacturer's standard catalog pages and data sheets, arranged in order of luminaire designation with model number nomenclature clearly marked with all proposed features. Catalog pages shall include the following information:
      a. Detailed information on luminaire construction.
      b. Dimensions.
      c. Power supplies.
      d. Lamping.
      e. Ratings.
      f. Finishes.
      g. Mounting requirements.
      h. Listings.
      i. Service conditions.
      j. Photometric performance.
      k. Installed accessories.
      l. Ceiling compatibility.
   2. For LED luminaires:
      a. Include estimated useful life, calculated based on IES LM-80 test data.
      b. Include IES LM-79 test report upon request.
      c. Include correlated color temperature (CCT), color rendering index (CRI), and delivered lumens.
   3. Provide electronic files of photometric data certified by a National Voluntary Laboratory Accreditation Program (NVLAP) lab or independent testing agency in IES LM-63 standard format upon request.
   4. For drivers: Include wiring diagrams, list of compatible controls, and driver data including dimming percentage.
   5. Submit driver and dimming ballast compatibility certificates signed by the lighting control system manufacturer certifying that proposed driver and dimming ballasts are compatible with proposed dimming systems.

H. Samples:
   1. Provide one sample(s) of each luminaire proposed for substitution upon request.
   2. Samples shall include the following:
      a. Lamps and drivers, installed.
      b. Cords and plugs.
      c. Support system.
      d. Custom factory-applied finishes, if required.
      e. Accessories.

I. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

J. Operation and Maintenance Data: For luminaires and lighting systems to include in operation and maintenance manuals.
   1. Provide a list of all lamp types used on Project; use ANSI and manufacturers' codes.
   2. Provide a list of all luminaires used on Project, including model number and manufacturer cutsheets.
   3. Provide installation and maintenance instructions for all luminaires used on Project.
   4. Provide warranty information for all luminaires used on Project.

K. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
   1. See Section 016000 - Product Requirements, for additional provisions.
   2. Extra Lenses and Louvers: Two% of total quantity installed for each type, but not less than one of each type.
   3. Extra Lamps: Ten% of total quantity installed for each type, but not less than two of each type.
   4. Extra Drivers and Ballasts: Three% of total quantity installed for each type, but not less than one of each type.
   5. Luminaire-mounted emergency battery pack: One for every 50 emergency lighting units.
   6. Globes and Guards: One for every 20 of each type and rating installed. Furnish at least one of each type.
   7. LED's: One for every 40 of each type and rating installed. The spare component shall be the smallest discrete element that the manufacturer recommends servicing in the field without voiding the warranty. In some cases, this will be a snap-in diode. In other cases, it will be a replacement fixture. Furnish at least one of each type.

L. Project Record Documents: Record actual connections and locations of luminaires and any associated remote components.

1.07 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

C. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

D. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

E. Qualification Data: For testing laboratory providing photometric data for luminaires.

F. Product Test Reports: For each luminaire, for tests performed by manufacturer and witnessed by a qualified testing agency.

G. Mockups:
   1. Refer to Architect’s list of required mockups.
   2. Provide with complete power and control connections.

3. Obtain Lighting Designer and Architect's approval of luminaires in mockups before starting installations.
4. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
6. Approved fixtures in in-place mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

H. Electrical Components of luminaires are listed and labeled by UL where applicable.

I. Provide luminaires and accessory components specified in this Section that are listed and labeled for their indicated use and installation conditions on Project.
1. Luminaires specified for installation in damp or wet locations are listed and labeled for use in such locations.
2. Luminaires specified for installation in insulated ceilings are IC-rated if insulation comes within 3" (76.2 mm) of sides of luminaire housings, or within 6" (152.4 mm) of top of luminaire housings.
3. Luminaires specified for installation in hazardous locations conform to UL 844.
4. Luminaires specified for installation underwater comply with UL 676.

1.08 DELIVERY, STORAGE, AND PROTECTION

A. Receive, handle, and store products according to NECA/IESNA 500 (commercial lighting), NECA/IESNA 502 (industrial lighting), and manufacturer's written instructions.

B. Keep products in original manufacturer's packaging and protect from damage until ready for installation.

1.09 FIELD CONDITIONS

A. Maintain field conditions within manufacturer's required service conditions during and after installation.

B. Final coordination of fixtures with ceiling types and finishes is the responsibility of the Architect.

C. For mechanical spaces, electrical rooms, EMR’s and similar spaces, final mounting locations of fixtures and coordination with equipment is the responsibility of the installing contractor.

1.10 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for LED luminaires, including drivers.

C. All above warranty periods shall start from date of substantial completion.

1.11 TECHNICAL AND ADMINISTRATIVE REQUIREMENTS

A. All information identified in the following Schedules, Details, Layouts and Specifications shall be considered to form a complete and integrated Specification for Lighting Fixtures and Control Systems in the agreed upon Scope Areas. The Lighting Designer shall be contacted for any queries regarding the proper interpretation of all information indicated on the Lighting Fixture Schedules, Fixture Cuts, Details and Specifications.

B. The submission of a contractor bid will be construed as evidence that a careful, complete and thorough examination of the premises, existing job conditions and Specifications has been made and later claims for labor, materials or equipment required or for difficulties encountered, which could have been foreseen had such an examination been made, will not be recognized. It shall also constitute a representation that the site has checked and verified all quantities, work and materials involved and shall take complete responsibility for any deficiencies encountered thereafter.

C. Specifications and drawings are intended to convey the salient features, function and character of the fixtures only, and do not undertake to illustrate or set forth every item or detail necessary for the work. Minor details not usually indicated on the drawings nor specified, but that are

necessary or normally required for the proper execution, completion, installation and operation of the fixtures, shall be included, the same as if they were herein specified or indicated on the drawings.

PART 2 PRODUCTS

2.01 LUMINAIRE REQUIREMENTS

A. Provide products listed and classified by UL, CSA, or ETL only.

B. Provide products that comply with requirements of NFPA 70.

C. Provide products that are listed and labeled as complying with UL 1598, where applicable.

D. Provide products listed, classified, and labeled as suitable for the purpose intended.

E. Provide products complying with Federal Energy Management Program (FEMP) requirements.

F. Unless otherwise indicated, provide complete luminaires including chip-on-board LEDs, lamp(s) and all sockets, drivers/ballasts, reflectors, lenses, housings and other components required to position, energize and protect the lamp and distribute the light.

G. Unless specifically indicated to be excluded, provide all required conduit, boxes, wiring, connectors, hardware, supports, trims, accessories, etc. as necessary for a complete and fully functional operating system.

H. Provide products suitable to withstand normal handling, installation, and service without any damage, distortion, corrosion, fading, discoloring, etc.

I. Recessed Luminaires:
   1. Ceiling Compatibility: Comply with NEMA LE 4.
   2. Luminaires Recessed in Insulated Ceilings: Listed and labeled as IC-rated, suitable for direct contact with insulation and combustible materials.
   3. Luminaires Recessed in Sloped Ceilings: Provide suitable sloped ceiling adapters.

J. Lamp base shall comply with applicable ANSI standards.

K. Luminaire shall comply with applicable NEMA standards.

L. Nominal Operating Voltage: As indicated on the drawings. Luminaires and components shall be suitable for operation at the voltage of the building circuits to which they are connected.

M. Lampholders shall be suitable for operation of the specified lamps and are set such that lamps are positioned in optically correct relation to all luminaire components. All lampholders comply with applicable requirements of ANSI C81.

N. Luminaires for use in damp or wet locations shall be suitably gasketed to prevent the entrance of moisture and shall be listed for such use.

O. LED Luminaires:
   1. Components: UL 8750 recognized or listed as applicable.
   2. Tested in accordance with IES LM-79 and IES LM-80.
   3. LED Luminaire Estimated Useful Life: Minimum of 50,000 hours at 70% lumen maintenance, calculated based on IES LM-80 test data.
   4. Compliant with Restriction of Hazardous Substances Directive (RoHS).
   5. LED luminaire shall be operated at constant and carefully regulated current levels. LEDs shall not be overdriven beyond their specified nominal voltage and current.
   6. For wet and damp use, LED-based fixture itself shall be sealed, rated, and tested for appropriate environmental conditions, not accomplished by using an additional housing or enclosure.
   7. LED luminaire housing shall be designed to transfer heat from the LED board to the outside environment.
   8. Luminaires shall have internal thermal protection.
   9. All hardwired connections to LED fixtures shall be reverse polarity protected and provide high voltage protection in the event connections are reversed or shorted during the installation process.

10. The lighting system shall consist of the type and manufacturer as shown on the drawings or approved equal. If other than fixture shown is submitted, complete illumination calculations are required to show equality.
11. LED fixtures shall be modular and allow for separate replacement of LED lamps and drivers. User serviceable LED lamps and drivers shall be replaceable from the room side. LED Boards shall be suitable for field maintenance and have plug-in connectors. LED boards shall be upgradable.
12. As in the case of other new technologies, it is possible that replacement products may not be available in the long term since technological advances may render older designs obsolete. Therefore, it is essential that the manufacturer guarantees availability of same or relatively similar products over at least a ten-year period.

P. LED Tape Lighting Systems: Provide all power supplies, drivers, cables, connectors, channels, covers, mounting accessories, and interfaces as necessary to complete installation.

Q. LED products which are connected to dimming systems shall be provided with dimmable power supplies and drivers which are compatible with the specified dimmer or dimming system.

R. Track Lighting Systems: Provide track compatible with specified track heads, with all connectors, power feed fittings, current limiters, dead ends, hangers and canopies as necessary to provide a and functional complete installation. All components shall be provided by one manufacturer.

S. Luminaires Mounted in Continuous Rows: Provide quantity of units required for length indicated, with all accessories required for joining and aligning, with no sway or visible angle changes.

T. General Construction:
1. Luminaires are constructed with joints made only by means of welded, brazed, screwed, or bolted construction methods. Soldered joints will not be permitted. No self-tapping screws, bled metal tapping methods, or rivets are employed for fastening any parts to or in any wireway or wiring chamber, for fastening any parts which must be removed to gain access to electrical components requiring service or replacing, or for fastening any electrical component or support for same.
2. All ferrous parts and supports, other than parts manufactured of stainless steel, are completely rustproofed after fabrication, and before finish coatings are applied. Rustproofing is by means of galvanizing, bonderizing, zinc plating, or by treatment with other industry standard rust-preventing processes providing rustproofing qualities equal to the processes mentioned above.
3. All screws, bolts, nuts, and other fascinating and latching hardware are cadmium or equivalent plated.
4. All metallic cast or extruded parts are close grained, sound, and free from imperfections or discolorations. Cast or extruded parts are rigid, true to pattern, and of ample weight and thickness. Cast or extruded parts are properly fitted, filed, ground buffed, and chased to provide furnished surfaces and joints free of imperfection with all details or ornamentation brought out. Finished thickness of all cast parts is not less than 1/8" (3.175 mm).
5. Housings are constructed such that all electrical components are easily accessible and replaceable without removing housings from their mountings.
6. Sheet metal components are fabricated of steel, except as indicated, Form and support sheet metal to prevent warping and sagging.
7. Doors, frames, and other means of internal access operate smoothly, free from light leakage under operating conditions, and are arranged to permit maintenance without use of tools, unless indicated otherwise on drawings. Arrange doors, frames, lenses, diffusers, and other pieces to prevent accidental falling during maintenance and when secured in operating position.
8. Specular, semi-specular, and laminated silver metallized film reflectors have a non-iridescent coating. Reflectors have total hemispheric reflectances equal to or greater than the following values, unless otherwise noted:
   a. White surfaces: 90%.
   b. Specular surfaces: 87%.

c. Semi-specular surfaces: 84%.
d. Laminated silver metallized films: 95%.

9. Reflector Cones
   a. Cones shall provide a minimum of 50-degree cutoff to source and source image.
   b. Plastic material shall not be used for reflector cones.
   c. Cones shall not be permanently fastened to the housing and shall be removable without tools. Retention devices shall not deform the cone or be visible from normal viewing angles.
   d. Trim shall be flush to ceiling without gaps or light leaks. Where the flange trim is separate from the cone, it shall have the same finish as the reflector cone.
   e. Reflector cones shall be uniform gauge, not less than 0.032” (0.8128 mm) thick, high purity aluminum Alcoa 3002 alloy. Cones shall be free from spin marks or other defects.
   f. Manufacture cones using the Alzak® process. Refer to Luminaire Schedule for cone color and finish, i.e., specular or diffuse requirements.

U. Diffusers and Globes
1. Acrylic Lighting Diffusers: 100% virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
   a. Lens Thickness: At least 1/8" (3.175 mm) minimum unless otherwise indicated.
   b. UV stabilized.
2. Glass: Annealed crystal glass unless otherwise indicated.
3. Factory-Applied Labels: Comply with UL 1598. Include recommended LED/Driver combinations. Labels shall be located where they will be readily visible to service personnel, but not seen from normal viewing angles when lamps are in place.
   a. Wattage restriction labels, where required.

2.02 EXIT SIGNS

A. Description: Exit signs complying with NFPA 101 and applicable state and local codes, ASHRAE Std 90.1 I-P or local energy code having jurisdiction and listed and labeled as complying with UL 924.
1. Color, letter height, and letter stroke comply with all requirements of authorities having jurisdiction, unless otherwise noted.
2. Edge-lit exit signs which are visible from two directions shall have a mylar mirror film inserted in the center of the panel, such that letters are not visible from the opposite direction.
3. Internally illuminated with LEDs unless otherwise indicated. 50,000 hours minimum rated lamp life. 5W maximum power consumption.
4. Number of illuminated faces: Single-face or double-face as indicated or as required for installed location.
5. Directional Arrows: As indicated or as required for installed location.
6. Mounting: As indicated or as required for installed location.

B. Self-Powered Exit Signs:
1. Operation: Upon interruption of normal power source or brownout condition exceeding 20% voltage drop from nominal, solid-state control automatically switches connected lamps to integral battery power for minimum of 90 minutes of rated emergency illumination, and automatically recharges battery upon restoration of normal power source.
2. Battery: Maintenance-free nickel cadmium (NiCad) unless otherwise indicated.
3. Diagnostics: Provide power status indicator light and accessible integral test switch to manually activate emergency operation.
4. Provide low-voltage disconnect to prevent battery damage from deep discharge.
5. Self-Diagnostics: Provide units that self-monitor functionality and automatically perform testing required by NFPA 101 where indicated; provide indicator light(s) to report test and diagnostic status.
6. Charger: Solid State, fully automatic with a sealed transfer relay. When the input voltage drops to 80% of normal or below, the relay energizes the lamps from the battery pack,

instead of the normal building power. When normal power is restored, the relay energizes the lamps from the normal building power, automatically recharges the battery, and floats it on the charger.

7. AC Only:
   a. Exit signs without battery to be powered by emergency circuit.
8. Provide cold temperature compatible unit where required.

C. Accessories:
1. Provide compatible accessory mounting brackets where indicated or required to complete installation.
2. Provide compatible accessory high impact polycarbonate vandal shields where indicated.
3. Provide compatible accessory wire guards where indicated.
4. Provide weatherproof type where indicated.
5. Provide heavy duty protection guard where indicated.
6. Where indicated, provide emergency remote heads that are compatible with the emergency lighting unit they are connected to and suitable for the installed location.

2.03 BALLASTS AND DRIVERS

A. Manufacturers:
1. Substitutions: See Section 016000 - Product Requirements.
2. Manufacturer Limitations: Where possible, for each type of luminaire provide ballasts or drivers produced by a single manufacturer.
3. Where a specific manufacturer or model is indicated elsewhere in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.

B. Ballasts/Drivers - General Requirements:
1. Provide ballasts or drivers containing no polychlorinated biphenyls (PCBs).
2. Minimum Efficiency/Efficacy: Provide ballasts or drivers complying with all current applicable federal and state ballast efficiency/efficacy standards.
3. Electronic Ballasts/Drivers: Inrush currents not exceeding peak currents specified in NEMA 410.

C. Dimmable LED Drivers:
1. Minimum Starting Temperature: Minus 20 deg F (Minus 29 deg C).
2. Rated Ambient Operating Temperature: 130 deg F (54 deg C).
3. Sound Rating: Class A.
4. Total Harmonic Distortion Rating: Less than 20%.
5. Transient Voltage Protection: IEEE C62.41.1 and IEEE C62.41.2, Category A or better.
6. Power Factor: 0.90 or higher.
7. Interference: Comply with 47 CFR 18, Ch. 1, Subpart C, for limitations on electromagnetic and radio-frequency interference for non-consumer equipment.
8. LED drivers shall conform to IEEE 1789 standards. Alternatively, manufacturers must demonstrate conformance with product literature and testing which demonstrates this performance. Systems that do not meet IEEE 1789 will not be considered.
9. Flicker Frequency: Greater than 100 Hz.
10. Dimming Protocol: Constant Current Reduction or Hybrid Pulse Width Modulation and Variable Frequency, unless otherwise indicated, required to reduce flicker. Protocol shall be as specified on Luminaire Schedule.
11. Dimming Range: Continuous dimming from 100% to ten% relative light output unless dimming capability to lower level is indicated, without strobing, flickering, or visible steps in transition.
12. Control Compatibility: Fully compatible with the dimming controls to be installed.
    a. Certified by manufacturer for use with individually specified luminaire, LED board/module, and individually specified control components.
13. Manufacturer(s):
    a. Unless otherwise noted, luminaire manufacturers bear responsibility for selecting compatible driver manufacturers.

2.04 LIGHT SOURCE (LAMPS, MODULES, BOARDS, ETC.)

A. Substitutions: See Section 016000 - Product Requirements.

B. Manufacturer Limitations: Where possible, provide lamps produced by a single manufacturer.
   1. Where a specific manufacturer or model is indicated in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.

C. General Requirements:
   1. Unless explicitly excluded, provide new, compatible, operable lamps in each luminaire.
   2. Verify compatibility of specified lamps with luminaires to be installed. Where lamps are not specified, provide lamps per luminaire manufacturer's recommendations.
   3. Minimum Efficiency: Provide lamps complying with all current applicable federal and state lamp efficiency standards.
   4. Color Temperature Consistency: Unless otherwise indicated, for each type of lamp furnish products which are consistent in perceived color temperature. Replace lamps that are determined by the Architect to be inconsistent in perceived color temperature.

D. Light Emitting Diodes (LED).
   1. Static LED Technology
      a. Correlated Color Temperature (CCT): 3500K unless otherwise indicated.
      b. Color Rendering Index (CRI): Not less than 80.
      c. Integral LEDs
         1) Individual LEDs shall be connected such that a catastrophic loss or the failure of one LED will not result in the loss of all LEDs within the luminaire.
         2) Lumen output shall not decrease by more than 20% over the minimum operational life of 50,000 hours at the rated ambient operating temperature.
         3) LEDs binned within a maximum three-step MacAdam Ellipse to ensure color consistency among luminaires of same type.
         4) Manufacturers:
            (a) Nichia
            (b) Samsung
            (c) Bridgelux
            (d) Xicato
            (e) Cree
            (f) Lumileds (Philips)
            (g) _____
   2. LED Retrofit Lamps - Wattage and lamp type as indicated, with base type as required for lighting fixture
      a. Comply with NEMA SSL 4 “SSL Retrofit Lamps: Suggested Minimum Performance Requirements”.
      b. Minimum Rated Life: 215,000 hours, unless otherwise indicated.
      c. LED retrofit lamps shall be tested for compatibility with lighting control systems to be installed. If provided lamps are not certified for compatibility without flicker, lamps shall be provided to lighting control manufacturer for testing.
      d. Manufacturers: as specified on Luminaire Schedule:
   3. Where a specific manufacturer or model is indicated elsewhere in the luminaire schedule or on the drawings, substitutions are not permitted unless explicitly indicated.

2.05 FINISHES

A. Provide metal finishes and paint colors as selected by the Architect.

B. Where a "Custom Color Finish" is specified but not identified, match sample provided by Architect.

C. Apply paint finishes over corrosion-resistant treatment or primer, free of streaks, runs, stains, blisters, and similar defects.

D. When the Architect issues no instructions pertaining to finishes, provide standard finishes as follows:

1. Unpainted non-reflecting surfaces are satin finished and coated with a baked-on clear lacquer to preserve the surface. Where aluminum surfaces are treated with an anodic process, the clear lacquer coating may be omitted.
2. Enamel coatings are of the high temperature baked-on type. Enamel reflecting surfaces are white with 90% minimum initial reflectance.
3. Porcelain enameled finishes meet or exceed RLM standards in all respects.
4. Painted surfaces on fixtures for use in damp or wet locations exhibit moisture resisting qualities equal to surfaces having epoxy-based coatings and appropriate to location.
5. Unpainted aluminum surfaces are anodized.

2.06 ACCESSORIES

A. Comply with requirements in Section 26 0529 "Hangers and Supports for Electrical Systems" for channel and angle iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2" (13 mm) steel tubing with swivel ball fittings and ceiling canopy. Finish same as luminaire.

C. Twin-Stem Hangers: Two, 1/2" (13 mm) steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

D. Wires: ASTM A 641/A 641 M, Class 3, soft temper, zinc-coated steel, 12 gauge (2.68 mm).

E. Rod Hangers: 3/16" (5 mm) minimum diameter, cadmium-plated, threaded steel rod.

F. Hook Hangers, Integrated assembly matched to luminaire, line voltage, and equipment with threaded attachment, cord, and locking-type plug.

G. Provide accessory plaster frames for luminaires recessed in plaster ceilings.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that field measurements are as indicated.

B. Verify that junction boxes are installed in proper locations and at proper mounting heights and are properly sized to accommodate conductors in accordance with NFPA 70.

C. Verify that suitable support frames are installed where required.

D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to luminaires.

E. Verify that conditions are satisfactory for installation prior to starting work.

3.02 PREPARATION

A. Provide extension rings to bring junction boxes flush with finished surface.

B. Clean dirt, debris, plaster, and other foreign materials from junction boxes.

3.03 TEMPORARY LIGHTING

A. If approved by the Architect and Lighting Designer, use permanent luminaires for temporary lighting. Install and energize the minimum number of luminaires necessary. When construction is sufficiently complete, remove the temporary luminaires; disassemble, clean, and install new lamps; and reinstall luminaires.

3.04 INSTALLATION

A. Coordinate locations of junction boxes provided under Section 260533.16 as required for installation of luminaires provided under this section.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Install products in accordance with manufacturer's instructions.

D. Install luminaires securely, in a neat and workmanlike manner, as specified in NECA 500 (commercial lighting) and NECA 502 (industrial lighting).

E. Provide required support and attachment in accordance with Section 260529.

F. Provide required seismic controls in accordance with Section 260548.

G. Install luminaires plumb and square and aligned with building lines and with adjacent luminaires.

H. Comply with requirements in Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables" and Section 26 0533 "Surface Raceways for Electrical Systems" for wiring connections and wiring methods.

I. Provide low voltage circuitry as required between dimming equipment and driver/ballasts in accordance with manufacturer's instructions.

J. Light fixture locations shown on electrical drawings are approximate. For light fixtures in building equipment rooms (Mechanical, Electrical, Telecommunications, etc.), coordinate fixture locations with equipment, such that optimal light distribution is obtained, without obstructing access to equipment. All other light fixtures are installed as shown on architectural drawings, or as directed by Architect.

K. Fixtures with asymmetric light distributions are oriented as shown in manufacturer’s installation instructions. When manufacturer’s instructions are not clear, obtain clarification from Architect before proceeding with installation.

L. Fixture manufacturer shall coordinate conduit entry locations with installing site condition.

M. Suspended Ceiling Mounted Luminaires:
   1. Do not use ceiling tiles to bear weight of luminaires.
   2. Do not use ceiling support system to bear weight of luminaires unless ceiling support system is certified as suitable to do so.
   3. Secure surface-mounted and recessed luminaires to ceiling support channels or framing members or to building structure.
   4. Secure pendant-mounted luminaires to building structure.
   5. Secure lay-in luminaires to ceiling support channels using listed safety clips at four corners.
   6. In addition to ceiling support wires, provide two galvanized steel safety wire(s), minimum 12 gauge, connected from opposing corners of each recessed luminaire to building structure.
   7. See appropriate Division 9 section where suspended grid ceiling is specified for additional requirements.
   8. Supports:
      a. Sized and rated for luminaire weight.
      b. Able to maintain luminaire position after cleaning and relamping.
      c. Provide support for luminaire without causing deflection of ceiling or wall.
      d. Luminaire mounting devices shall be capable of supporting a horizontal force of 100% of luminaire weight and vertical force of 400% of luminaire weight.
   9. Ceiling-Grid-Mounted Luminaire Supports: Use grid as a support element.
      a. Install ceiling support system rods or wires, independent of the ceiling suspension devices, for each luminaire. Locate not more than 6" (152.4 mm) from luminaire corners.
      b. Support Clips: Fasten to luminaires and to ceiling grid members at or near each luminaire corner with clips that are UL listed for the application.
      c. Luminaires of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support luminaires independently with at least two 3/4" (20 mm) metal channels spanning and secured to ceiling tees.
      d. Install at least one independent support rod or wire from structure to a tab on luminaire. Wire or rod shall have breaking strength of the luminaire weight at a safety factor of 3.

N. Recessed Luminaires:
   1. Install trims tight to mounting surface with no visible light leakage.
      a. Secured to junction box.
      b. Attached to ceiling structural members.
      c. Trim ring flush with finished surface.

2. Non-IC Rated Luminaires: Maintain required separation from insulation and combustible materials according to listing.
3. Luminaires Recessed in Fire-Rated Ceilings: Install using accessories and firestopping materials to meet regulatory requirements for fire rating.

O. Suspended Luminaires:
1. Unless otherwise indicated, specified mounting heights are to bottom of luminaire.
2. Install using the suspension method indicated, with support lengths and accessories as required for specified mounting height.
3. Provide minimum of two supports for each luminaire equal to or exceeding 8 feet nominal length, with no more than 6 feet between supports.
4. Install canopies tight to mounting surface.
5. Unless otherwise indicated, support pendants from swivel hangers.
6. Suspended Lighting Luminaire Support:
   a. Pendants and Rods: Where longer than 48" (1219.2 mm), brace to limit swinging.
   b. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with an approved junction box and accessories that hold stem and provide damping of luminaire oscillations. Support junction box vertically to building structure using approved devices.
   c. Continuous Rows of Luminaires: Use power cable or stem for power feeding at one end and tubing, rod, or wire support for suspension for each unit length or luminaire chassis, including one at each end.
   d. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.
   e. Feed location within room shall be submitted for Lighting Designer approval prior to installation.

P. Wall-Mounted Luminaires:
1. Unless otherwise indicated, specified mounting heights are to center of luminaire.
2. Wall-Mounted Lighting Luminaire Support:
   a. Attached to structural members in walls.
   b. Attached to a minimum 1/8" (3 mm) backing plate attached to wall structural members.
   c. Attached using through bolts and backing plates on either side of wall.
   d. Do not attach luminaires directly to gypsum board.

Q. Cove-Mounted Luminaires:
1. Luminaires shall be installed so as to produce a continuous and unbroken band of light free of visual imperfections, hot spots, socket shadows, light gaps, etc. The inability to provide this appearance shall be brought immediately to the Lighting Designer’s attention prior to installation.

R. Install accessories as indicated in luminaire schedule and furnished with each luminaire.

S. Bond products and metal accessories to branch circuit equipment grounding conductor.

T. Exit Signs:
1. Unless otherwise indicated, connect unit to unswitched power from same circuit feeding normal lighting in same room or area. Bypass local switches, contactors, or other lighting controls.
2. Install lock-on device on branch circuit breaker serving units.

U. Remote LED Drivers:
1. Distance between the driver and luminaire shall not exceed that recommended by driver manufacturer. Verify, with driver manufacturers, maximum distance between driver and luminaire.
2. Locate in a ventilated and accessible area in accordance with manufacturer requirements.

V. Identify luminaires connected to emergency power system in accordance with Section 260553.

W. Install lamps in each luminaire as required.

X. Coordinate layout and installation of luminaires and suspension system with other construction that penetrates ceilings or is supported by them.

3.05 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Inspect each product for damage and defects.

C. Perform the following tests and inspections:
   1. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
   2. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery power and retransfer to normal.
   3. For emergency power units perform the following:
      a. Charge emergency power units and batteries a minimum of one hour and depress switch to conduct short-duration test.
      b. Charge emergency power units and batteries a minimum of 24 hours and conduct one-hour discharge test.

D. Operate each luminaire after installation and connection to verify proper operation.

E. All LED fixtures mounted in locations which are not readily accessible by a ladder, or by a lift which resides permanently on the premises, shall be operated at full output for a minimum of 500 hours, and all failed components promptly replaced, before the scaffolding or construction lift used to install them is removed.

F. Luminaire will be considered defective if it does not pass operation tests and inspections.

G. Prepare test and inspection reports.

H. Test self-powered exit signs, emergency lighting units, and fluorescent emergency power supply units to verify proper operation upon loss of normal power supply.

I. Correct wiring deficiencies and repair or replace damaged or defective products. Repair or replace excessively noisy ballasts/drivers as determined by Architect.

J. Repair and retest malfunctioning fixtures and components. Repeat procedure until all units operate properly.

3.06 ADJUSTING

A. Aim and position adjustable luminaires to achieve desired illumination as indicated or as directed by Architect and Lighting Designer . Secure locking fittings in place. Where possible, units shall be focused during the normal working day. However, where daylight interferes with seeing, aiming shall be accomplished at night.

B. Exit Signs with Field-Selectable Directional Arrows: Set as indicated or as required to properly designate egress path as directed by Architect or authority having jurisdiction.

3.07 CLEANING

A. Clean surfaces according to NECA 500 (commercial lighting), NECA 502 (industrial lighting), and manufacturer's instructions to remove dirt, fingerprints, paint, or other foreign material and restore finishes to match original factory finish.

B. Clean lenses to remove dirt and debris.

C. Clean reflectors to remove fingerprints, dust, and debris.

3.08 CLOSEOUT ACTIVITIES

A. See Section 017800 - Closeout Submittals, for closeout submittals.

B. See Section 017900 - Demonstration and Training, for additional requirements.

C. Demonstration: Demonstrate proper operation of luminaires to Architect, and correct deficiencies or adjust as directed.

D. Just prior to Substantial Completion, replace all lamps that have failed.

E. Confirm or re-adjust all recessed luminaires such that trims are flush to ceiling and light leakage is not visible.

3.09 PROTECTION

A. Protect installed luminaires from subsequent construction operations.

END OF SECTION 265100

SECTION 270500 - COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 GENERAL

1.01 SUMMARY

A. This section covers the basic materials and installation methods for telecommunications work. It applies in general to all sections under DIVISION 27.

B. Section includes:
1. Communications system design requirements.
2. Communications pathways.
3. Sleeves and sleeve seals.
4. Fire-Rated cable pathways.
5. Requirements for common communications installation.

1.02 DEFINITIONS

A. "Furnish" or "provide": to supply, install and make complete, safe, and operable, the particular work referred to unless specifically indicated otherwise.

B. "Install": to erect, mount and make complete with all related accessories.

C. "Supply": to purchase, procure, acquire, and deliver complete with related accessories.

D. "Work": includes labor, materials, equipment, services, and all related accessories necessary for the proper and complete installation of complete systems.

E. "Wiring": includes raceway, fittings, wire, boxes, and all related accessories.

F. "Concealed": not in view, installed in masonry or other construction, within furred spaces, double partitions, hung ceilings, trenches, crawl spaces, or enclosures.

G. "Exposed": in view, not installed underground or "concealed" as defined above.

H. "Indicated," "shown," or "noted": as indicated, shown or noted on drawings or specifications.

I. "Similar" or "equal": of base bid manufacturer, equal in quality, materials, weight, size, performance, design and efficiency of specified product, conforming with "Base Bid Manufacturers."

J. "Reviewed," "satisfactory," "accepted," or "directed": as reviewed, satisfactory, accepted, or directed by or to Architect and/or Engineer.

K. "Finished Spaces": Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

L. "Exposed, Interior Installations": Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

M. "Exposed, Exterior Installations": Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

N. "Concealed, Interior Installations": Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.

O. "Concealed, Exterior Installations": Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

P. EPDM: Ethylene-propylene-diene terpolymer rubber.

Q. NBR: Acrylonitrile-butadience rubber.

1.03 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 260533.13 - Conduit for Electrical Systems.

C. Section 260533.16 - Boxes for Electrical Systems.

1.04 REFERENCE STANDARDS

A. Published specifications, standards tests, or recommended methods of trade, industry or governmental organizations apply to work in all Sections as noted below:
   1. NEMA - National Electrical Manufacturers' Association.
   2. NECA - National Electrical Contractors Association.
   3. TIA/EIA - Telecommunications Industry Association/Electronic Industries Alliance.
   4. BICSI - Building Industry Consulting Service International Telecommunications Distribution Methods Manual, Latest Edition.
   5. ANSI - American National Standards Institute.
   6. IEEE - Institute of Electrical and Electronics Engineers.
   7. ASTM - American Society for Testing and Materials.
   8. NEC - National Electrical Code.
   9. NFPA - National Fire Protection Association.
   10. CFR - Code of Federal Regulations.
   11. UL - Underwriters' Laboratories, Inc.
   12. OSHA - Occupational Safety and Health Administration Regulations.

B. NECA/BICSI 568 - Standard for Installing Building Telecommunications Cabling; National Electrical Contractors Association 2006.

C. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. TIA-568 (SET) - Commercial Building Telecommunications Cabling Standard Set 2016.

E. TIA-569 - Telecommunications Pathways and Spaces 2015d, with Addendum (2016).

F. TIA-569-D - Telecommunications Pathways and Spaces Rev D, 2015.

G. TIA-568-C.2 - Balanced Twisted-Pair Telecommunications Cabling and Components Standards Rev C, 2009 (with Addenda; 2016).

H. TIA-568-C.3 - Optical Fiber Cabling Components Standard Rev C, 2008 (with Addenda; 2011).

I. TIA-569-D - Telecommunications Pathways and Spaces Rev D, 2015.

J. TIA-606 - Administration Standard for Telecommunications Infrastructure 2017c.

K. TIA-606-B - Administration Standard for Telecommunications Infrastructure Rev B, 2012 (with Addenda; 2015).

L. TIA-607 - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises 2015c, with Addendum (2017).

M. TIA-607-C - Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises Rev C, 2015.

N. The referenced standards establish a base level of quality with industry standards. The contract drawings and these specifications take precedence over any documentation referenced below.

O. Nothing in the contract drawings or these specifications is intended to conflict with the standards referenced above. Any conflicts determined by the contractor shall be communicated to the Architect and Engineer prior to the work in question being performed or material being purchased.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. See Section 016000 - Product Requirements, for submittal requirements of factory fabricated items.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

D. Sustainable Design Documentation: Submit manufacturer's product data on cable and cable insulation showing compliance with specified lead content requirements.

E. Shop Drawings: Show compliance with requirements on isometric schematic diagram of network layout, showing cable routings, telecommunication closets, rack and enclosure layouts and locations, service entrance, and grounding, prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).

F. Submit shop drawings for approval ten (10) days prior to start of work and prior to ordering of material to consist of one (1) set of reproducible and three (3) sets of prints of drawings, diagrams, and/or manufacturers' data in accordance with the contract documents.

G. Evidence of qualifications for installer.

H. Test Plan: Complete and detailed plan, with list of test equipment, procedures for inspection and testing, and intended test date; submit at least 60 days prior to intended test date.

1.06 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a 1 year period after Date of Acceptance by the Owner.

C. The Contractor shall furnish a written guarantee to replace or repair promptly and assume responsibility for all expenses incurred for any workmanship and equipment in which defects develop within one year form the date of final certificate for payment and/or from date or actual use of equipment or occupancy of spaces by Owner included under the various parts of work, whichever date is earlier. This work shall be done as directed by the Owner. This guarantee shall also provide that where defects occur, the Contractor will assume responsibility for all expenses incurred in repairing and replacing work of other trades affected by defects, repairs or replacements in equipment supplied by the Contractor.

D. A manufacturer and/or supplier's warranty shall be provided by the contractor for all associated hardware and labor for a period of twenty-five (25) years from the date of acceptance by the Owner. Contactor shall replace any defective components at no cost to the Owner for parts or labor. The warranty shall cover channel and link performance parameters that meets or exceeds the specifications for the designed solution.

1.07 QUALITY ASSURANCE

A. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

B. Manufacturer Qualifications: At least 3 years experience manufacturing products of the type specified.

C. Installer Qualifications: A company having at least 3 years experience in the installation and testing of the type of system specified, and:
   1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
   2. Supervisors and installers factory certified by manufacturers of products to be installed.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

F. All work shall combine with National Electrical Code and all applicable local codes.

G. All equipment and accessories shall be the product of manufacturers regularly engaged in their manufacture. All items of a given type shall be the products of the same manufacturer.

H. Furnish all materials, equipment and accessories new and free from defects.

I. All electrical equipment shall be listed by Underwriters' Laboratories, Inc. (UL) or bear UL labels.

J. Supply all equipment and accessories in complete compliance with and in accordance with the applicable standards listed in reference standards of this Section and with all applicable

national, state and local codes.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Ship materials and equipment in crated sections of sizes to permit passing through available space, where required

C. Deliver equipment with protective crating and shrink-wrapped covering.

D. Receive and accept materials and equipment at the site, properly handle, house, and protect them from damage and the weather until installation. Replace equipment damaged in the course of handling without additional charge.

E. Store to prevent damage and protect from weather, dirt, fumes, water, and construction debris in clean dry space

F. Arrange for and provide storage space or area at the job site for all materials and equipment to be received and/or installed in this project

G. All exposed openings of equipment and materials are to be covered

H. Handle according to manufacturer's written rigging and installation instructions for unloading, transporting, and setting in final location

I. Protect units from physical damage. Leave factory shipping covers in place until installation

1.09 INSPECTIONS

A. Independent testing and inspections shall be provided by this contractor who shall hire the inspector or testing agency.

B. Register with the approved agency for the AHJ prior to starting any work.

C. Furnish inspection certificates from said agency upon completion of the work for all equipment and systems installed or furnished as part of the work.

1.10 COORDINATION

A. Arrange for distribution spaces, space for equipment, chases, slots, and openings in building structure during progress of construction, to allow for telecommunications installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for telecommunication items requiring access that are concealed behind finished surfaces.

D. The Communications Drawings indicate the work for the communications systems. The Architectural, Structural, and Mechanical Drawings contain certain information and details pertinent to the communications work. The telecommunications contractor should become familiar with all drawings and requirements pertinent to the work.

E. Drawings are diagrammatic and should not be used to obtain dimensional requirements by scaling the drawings.

F. The commmunications equipment should be arranged, mounted, and supported to:
   1. Allow maximum headroom, unless indicated by the drawings to mount at a specific height at a reduced headroom.
   2. Provide for minimual interference to other equipement installations when disconnecting the equipment pertinent to this work.
   3. Allow for right of way of piping and conduit.
   4. Allow for clear working and access space of other equipment from installed pathways, cables, cable trays, and wireways.

G. Coordinate selection and application of sleeves with firestopping as specificed in Section 078400 - Firestopping.

1.11 EQUIPMENT LOCATIONS

A. Locations are subject to changes in order to avoid obstacles in building construction. All dimensions and conditions are to be verified on site. Check layout for sizes and clearances, so that the apparatus and material may be installed and operated satisfactorily in space provided. Install equipment and raceways to preserve headroom and to keep openings and passageways clear.

B. Install equipment, boxes and outlets in accessible locations. Obtain final locations of all outlets and equipment from details on drawings and from Architect. Examine drawings of other trades and avoid interferences with their work.

C. Refer to architectural details for mounting heights and locations of devices.

D. Install conduit to avoid mechanical and/or structural obstructions, minimizing crossovers.

E. Exposed conduit shall be installed parallel or perpendicular to building lines.

F. Provide minimum of 6 inches clearance between communications work and electrical work, flues, steam pipes and other heat sources.

G. Mounting heights of outlets and equipment shall be as indicated on "Mounting Height" Schedule, or as specified herein.

H. Verify all door swings before installing switch boxes. In case of conflict between drawings, Architectural details shall take precedence.

I. Architect reserves the right to change, without additional cost, location of any communications outlet, provided such changed location is not more than 10 feet, and is ordered changed before said work is completely "roughed in".

J. Locations of communications equipment and connections to all other equipment are approximately correct, and are subject to such modifications as are required at time of installation, in order to meet field conditions or the dimensions of equipment actually being supplied.

K. No changes are to be made in the original design without written approval by Architect.

PART 2 PRODUCTS

2.01 SLEEVES FOR PATHWAYS

A. Conduit: As specified in Section 260533.13; provide pull cords in all conduit.

B. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.
   1. Products:
      a. Refer to parts list on T series drawings.

C. J-Hooks
   1. Description: Prefabricated sheet metal cable supports for telecommunications cable.
   2. Manufacturers: Subject to compliance with requirements, provide by the following. For requirements regarding Substitutions for Cause see Division 01.
      a. Erico
      b. Owner approved Equal.
   3. Listed and labelled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
   4. Comply with TIA-569-D.
   5. Stainless steel.
   6. J or U shape, based on usage.
   7. Provide J-hooks as specified in Drawings. J hooks shall be wide based and sized appropriately to allow correct fill ratio with 20% expansion.
   8. Utilize the appropriate attachment hardware as required (i.e., straps, clamps, brackets, etc.)

2.02 FIRE STOPPING

A. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by Article 300-21 of the National Electric Code.

B. Use sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM E 119, and NFPA 251 and the hose stream test in accordance with UL 1OB.

C. Provide removable fire-stopping pillows (IPC flamesafe sealbags or approved equivalent) in an approved fashion in openings greater than 4" diameter, or 4" x 4" square cross section. Provide wire mesh grate over bags as recommended by manufacturer subsequent to installation.

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA-568 (SET) (cabling), TIA-569 (pathways), TIA-607 (grounding and bonding), NECA/BICSI 568, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Comply with Communication Service Provider requirements.

C. Grounding and Bonding: Perform in accordance with TIA-607 and NFPA 70.

D. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400 - Firestopping.

E. Follow manufacturers' instructions for installing all telecommunications cabling. Where instructions are unavailable, follow approved industry practice.

F. Compare communications drawings and specifications with the drawings and specifications of other trades, report any discrepancies to the Consultant; and obtain written instructions for changes necessary in the work. Include most stringent requirements in bid.

G. Repairs or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

H. Clean up all debris generated by installation activities and discard as directed by the Construction Manager.

I. Maintain a current copy of this Specification and related Drawings at the job site at all times.

3.02 INSTALLATION OF PATHWAYS

A. Install pathways with the following minimum clearances:
   1. 48 inches from motors, generators, frequency converters, transformers, x-ray equipment, and uninterruptible power systems.
   2. 12 inches from power conduits and cables and panelboards.
   3. 5 inches from fluorescent and high frequency lighting fixtures.
   4. 6 inches from flues, hot water pipes, and steam pipes.

B. Conduit, in Addition to Requirements of Section 260533.13:
   1. Arrange conduit to provide no more than the equivalent of two 90 degree bend(s) between pull points.
   2. Conduit Bends:
      a. For conduits trade size 2 or smaller: not less than 6 times conduit internal diameter.
      b. For conduits greater than trade size 2: not less than 10 times conduit internal diameter.
   3. Arrange conduit to provide no more than 100 feet between pull points.

C. Outlet Boxes:
   1. Coordinate locations of outlet boxes provided under Section 260533.16 as required for installation of telecommunications outlets provided under this section.

3.03 INSTALLATION OF EQUIPMENT AND CABLING

A. Cabling:
   1. Do not bend cable at radius less than manufacturer's recommended bend radius; for unshielded twisted pair use bend radius of not less than 4 times cable diameter.
   2. Do not over-cinch or crush cables.
   3. Do not exceed manufacturer's recommended cable pull tension.
   4. When installing in conduit, use only lubricants approved by cable manufacturer and do not chafe or damage outer jacket.

B. Service Loops (Slack or Excess Length): Provide the following minimum extra length of cable, looped neatly:
   1. At Distribution Frames: 120 inches.

C. Copper Cabling:
   1. Category 5e and Above: Maintain cable geometry; do not untwist more than 1/2 inch from point of termination.
   2. For 4-pair cables in conduit, do not exceed 25 pounds pull tension.
   3. Use T568B wiring configuration.

D. Identification:
   1. Use wire and cable markers to identify cables at each end.

3.04 STAFFING

A. Designate a qualified foreman. The foreman shall be present in the field at all times during the performance of the work.

B. Provide a supervisory work force sufficient to maintain efficient performance of the contractor's responsibilities.

C. Use only skilled and reliable work force and discontinue the services of anyone employed on this project upon written request by the Owner, Architect, Construction Manager or Consultant.

D. Use personnel who are qualified (at minimum) to perform all of the installation and testing work activities required under the contract.

E. Provide and use the proper tools in good working order for the performance of the work. The Consultant reserves the right to review the tools and tool maintenance procedures of the contractor and require replacements to be obtained.

F. Telephone and data industry cable installation standards, TIA/EIA and BICSI standards, and manufacturers' instructions shall be used for in-process quality control and final acceptance of the work.

3.05 FIELD QUALITY CONTROL

A. See Section 014000 - Quality Requirements, for additional requirements.

B. Comply with inspection and testing requirements of specified installation standards.

C. Visual Inspection:
   1. Inspect cable jackets for certification markings.
   2. Inspect cable terminations for color coded labels of proper type.
   3. Inspect outlet plates and patch panels for complete labels.
   4. Inspect patch cords for complete labels.

3.06 CABLE TESTING

A. Test all cables installed under the contract.

B. Pre-installation Inspection
   1. Visually inspect all cables, cable reels and shipping cartons for shipping damage. Return visibly damaged items to the manufacturer.
   2. Prior to testing, submit for review and approval copies of test report forms proposed for use. Forms shall, at minimum, contain: Project name; Contractor's name; Date of test; Media type and description; Make, model and serial number of the test equipment used

and date of last calibration.

C. Post Installation Testing
   1. Test only completed systems. Partial or statistically sampled testing is not acceptable, except by prior, written approval from the Consultant.
   2. perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.
      a. Test cable pairs from the work area outlet, through all conductors, patches and cross connects, to the equipment room.
      b. Test horizontal cable pairs not cross-connected to backbone from their furthest termination point to the work area outlet.
   3. 4-pair Category 6 UTP: in addition to end-to-end tests listed above,
      a. Conduct a permanent link test of each cable including: wire map, length, insertion loss, NEXT loss, PSNEXT loss, ELFEXT loss, PSELFEXT loss, propagation delay, and delay skew with injected standard signals, utilizing automated test equipment. Record all results. Test bi-directionally in accordance with ANSI/TIA/EIA-568 () and compare results with the performance requirements of ANSI/TIA/EIA-568-B.1 and/or B.2-1 respectively.
      b. Test cabling not cross connected or patched within the closet as a permanent link.
   4. For 4-pair, 25-pair, and 50-pair cables, replace the entire cable if a bad pair or conductor is found. For cables with a pair count of 100-pairs or higher, replace if more than 5 pairs are bad.
   5. Remove all defective cables from cable pathways. Do not abandon cables in place.
   6. The Consultant reserves the right to observe the conduct of any or all portions of the testing process and to conduct, and to require the Contractor, using the Contractor's equipment and labor, a random re-test of up to five (5) percent of the cable plant to confirm documented test results.
   7. Document all test results and corrective procedures and submit to the Consultant within ten (10) working days of test completion.
   8. In addition to the actions specified above, the contractor may be required to be present while the owner or owner's designated representatives conduct performance tests of the transport electronics connected to the cabling system.

3.07 ACCEPTANCE

A. Once the testing has been completed, as-built and testing documentation delivered to the Consultant, and the Consultant is satisfied that all work is in accordance with the contract documents, the Consultant shall notify the contractor in writing of the acceptance of the work performed. The date of this acceptance shall constitute the commencement of the warranty period.

3.08 CABLE IDENTIFICATION SYSTEM

A. Use color coding in accordance with the TIA-606-B standards.

B. Jacks, faceplates and wall outlets at the user locations, termination blocks and individual lateral cables shall be labeled with (at minimum) machine generated black uppercase lettering on a permanent adhesive label stock, covered with a permanent water resistant sealer. Labeling stock and/or lettering must be used that provides a high contrast with the color of the terminating equipment, faceplate or cable.

C. Place labels on both ends of the cable at least 4 inches from the point at which the cable is terminated on the connector or terminal block.

D. Provide permanent, machine generated cable tags. Temporary tags are acceptable only during construction. Label each tag with the appropriate cable number as shown on the drawings and as indicated on the cable schedules provided by the Consultant.

E. Cable identification numbers shown on the plans are presented in an abbreviated format. All cables ID's shall (at minimum) indicate the floor, originating closet ID, and the sequential cable number shown on drawings.

F. If at any time during the job the permanent cable tag becomes illegible or is defaced or removed, immediately replace it with a duplicate pre-printed cable tag.

3.09 PANEL IDENTIFICATION

A. Furnish a nameplate for each patch panel, cross-connect field, equipment rack, etc. Unless otherwise noted, use a permanent adhesive label stock, covered with a permanent water-resistant sealer.

3.10 TERMINATING BLOCKS, DISTRIBUTION RACKS AND PATCH PANELS

A. Locate and place all terminating and distribution hardware as shown on drawings.

B. Assemble and install all equipment per manufacturers' printed instructions.

C. Terminate all horizontal Category 6 UTP cables directly on the 110-type termination strips at the rear of rack-mounted 24-port patch panels, unless otherwise noted.

3.11 CABLE PULLING

A. Do not exceed a pulling tension of 110 N (25 lbf) on 4-pair UTP cables.

3.12 CABLE INSTALLATION

A. Special Conditions
   1. Furnish and install communications cables per the drawings and specifications provided by the Consultant and per manufacturer's recommendations.
   2. Install each station cable as an uninterrupted conductor section from the IDF closet to the user-end termination point, as indicated on the drawings, without splices or mechanical couplers between the points of origin and termination.
   3. The pathways shall be parallel to building lines and shall sweep/turn at 90 degree angles while maintaining minimum bend radius for cable, and shall comply with the guidelines and recommendations outlined in the TIA-568-C.2 and TIA-568-C.3 Series of standards and the TIA-569-D Standard.
   4. Contractor shall support all backbone cables and all primary horizontal cable bundles on open mesh cable tray to be furnished and installed under the Telecommunications Pathways work. No non-re-enterable tie wraps shall be used to secure cables to the trays.
   5. Where horizontal cables exit trays to run to workstation locations, contractor shall furnish and install J-hooks with the appropriate mounting hardware every 60 inch OC (maximum) for open cable runs. J-hooks shall not be fastened to suspended ceiling support structures, electrical or plumbing piping or any other trade work.
      a. J-Hooks shall be installed 48" to a maximum of 60 inch apart. Spacing shall maintain maximum sag of 12" between hooks. Closer spacing will be required anytime the condition exists.
      b. J-Hooks shall be installed at the point of elevation change as well as change of direction.
   6. Provide all other outlet configurations in accordance with the Drawings.

B. Terminate all four-pair UTP horizontal cables on 4-pair Category 6 jacks. The pinning configuration of the outlet jacks shall be T568B unless otherwise specified by the Owner prior to installation. The jacks shall then be inserted into appropriate faceplates for flush wall mounted receptacles, surface-mounted channels or boxes.

C. Unless otherwise noted, route all intra-building station cables above the finished ceilings, transitioning vertically to wall mounted back boxes and/or surface-mounted wiring channels via conduit stub-ups into the ceiling void or to floor boxes or poke-thru fittings to the floor above, as required.

D. Label each outlet and each cable with an appropriate ID number.

3.13 EQUIPMENT ROOM

A. All cables, after entry into the equipment rooms must be secured to backboards and dressed into supports. The contractor shall attach the cables where required to plywood backboards using Velcro-type re-enterable cable ties at spacing of approximately 12 inches. Velcro cable ties shall be secured to backboards using #10 machine screws and metallic washers, or rigid

tabs.

B. Support all cables mounted onto patch panels with strain management bars on rear of rack.

C. Route cables from work locations into equipment rooms via overhead distribution. Maintain overhead distribution wherever possible within equipment rooms.

END OF SECTION

SECTION 270526 - GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Grounding and bonding requirements.

B. Conductors for grounding and bonding.

C. Connectors for grounding and bonding.

D. Ground busbars.

1.02 DEFINITIONS

A. BCT: Bonding conductor for telecommunications.

B. EMT: Electrical metallic tubing.

C. TBB: Telecommunications bonding backbone.

D. TGB: Telecommunications grounding busbar.

E. TMGB: Telecommunications main grounding busbar.

1.03 SYSTEM DESCRIPTION

A. Provide a communications bonding and grounding system as described in this document, documents and drawings specific to that project, and in compliance with the above cited Codes, Standards and Agencies.

B. Comply with the requirement of Code of Practice for Info-Communications Facilities in Buildings.

C. Comply with the requirement for 260526 - Grounding and Bonding for Electrical Systems.

D. Bond the following items within the telecommunications grounding system.
   1. Metallic raceway systems, including metallic cable trays.
   2. Communications equipment enclosures (cabinets) or cross-connect frames.
   3. All metal cable conduit.
   4. Electrical service panels in entrance facilities, telecommunications and equipment rooms.
   5. Wall and rack mounted grounding busbars.
   6. Exposed building steel that is within 6 feet of equipment racking systems.
   7. Building steel extending to earth in outside-plant.
   8. All related bonding accessories.

1.04 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Grounding to conform to applicable building codes.

C. Cable and equipment to be installed in a neat and workmanlike manner.

D. Methods of construction that are not specifically described or indicated in the contract documents to be subject to the control and approval of the owner or their official representatives.

E. Equipment and materials specified shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed.

F. Where “approved equal” is stated, equipment shall be equivalent in every way to that of the equipment specified and subject to written approval by from owner per the Substitutions Policy listed below.

G. Materials and Methods shall comply in every way with above cited Standards and Codes.

H. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

I. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.

J. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff..

K. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements for submittals procedures.

B. Product Data: Provide manufacturer's standard catalog pages and data sheets for grounding and bonding system components.

C. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of product.

D. Field quality control test reports.

E. Materials Substitution Policy:
1. Substitution of products for those specified within this document is not allowed without express written permission from owner.
2. Should Contractor feel product substitution unavoidable for reasons of logistics or availability, Contractor shall submit to the owner project representative a request for product substitution in writing no less than 5 business days in advance of bid explaining need for deviation from this specification.
3. Written requests for substitution shall be accompanied by all drawings, specification sheets and engineering documents, as well as third party laboratory performance test results proving equivalent or superior performance in mechanical or electrical function of the product to be substituted.
4. Equal substituted product acceptance must be received in writing from owner or their official representatives.
5. Contractor shall be responsible for, and assume all costs for removal and replacement of any substituted materials or products not approved in writing from owner or their official representatives. Such costs shall include, but not be limited to labor, materials as well as any penalties or fees for late completion.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.01 GROUNDING AND BONDING REQUIREMENTS

A. Do not use products for applications other than as permitted by NFPA 70 and product listing.

B. Unless specifically indicated to be excluded, provide all required components, conductors, connectors, conduit, boxes, fittings, supports, accessories, etc. as necessary for a complete grounding and bonding system.

C. Where conductor size is not indicated, size to comply with NFPA 70 but not less than applicable minimum size requirements specified.

D. Communications Systems Grounding and Bonding:
1. Provide intersystem bonding termination at service equipment or metering equipment enclosure and at disconnecting means for any additional buildings or structures in accordance with NFPA 70.
2. Provide bonding jumper in raceway from intersystem bonding termination to each communications room or backboard and provide ground bar for termination.
   a. Bonding Jumper Size: 6 AWG, unless otherwise indicated or required.
   b. Raceway Size: 3/4 inch trade size unless otherwise indicated or required.
   c. Ground Bar Mounting Height: 8 feet above finished floor unless otherwise indicated.

2.02 GROUNDING AND BONDING COMPONENTS

A. General Requirements:

1. Provide products listed, classified, and labeled as suitable for the purpose intended.
2. Provide products listed and labeled as complying with UL 467 where applicable.
3. Comply with TIA-607-C.

B. Telecommunications Main Grounding Busbar (TMGB)
1. Meet BICSI and TIA-607-C requirements for network systems grounding applications.
2. Telecommunications Main Grounding Busbar (TMGB) shall be constructed of 0.25 inch thick solid copper bar.
3. Minimum 95% copper content.
4. The busbar shall be 4 inch high and 20 inch long and shall have 30 attachment points (two rows of 15 each) for two-hole grounding lugs.
5. Employ BICSI hole spacing to fit HGBL series 2-hole lugs.
6. The busbar shall include wall-mount stand-off brackets, assembly screws and insulators creating a 4 inch standoff from the wall.
7. The busbar shall be UL Listed as grounding and bonding equipment.

C. Telecommunications Grounding Busbar (TGB)
1. Meet BICSI and TIA-607-C requirements for network systems grounding applications.
2. Telecommunications Grounding Busbar (TGB) shall be constructed of 0.25 inch thick solid copper bar.
3. Minimum 95% copper content.
4. The busbar shall be 2 inch high and 12 inch long and shall have 9 attachment points (one row) for two-hole grounding lugs.
5. Employ BICSI hole spacing to fit HGBL series 2-hole lugs.
6. The busbar shall include wall-mount stand-off brackets, assembly screws and insulators creating a 2 inch standoff from the wall.
7. The busbar shall be UL Listed as grounding and bonding equipment.

D. Conductors for Grounding and Bonding, in Addition to Requirements of Section 260526:
1. Use insulated copper conductors unless otherwise indicated.
   a. Stranded copper wire, green or green with yellow stripe insulation, insulated for 600 V, and complying with UL 83.
   b. Ground wire for custom-length equipment ground jumpers shall be No. 6 AWG, 19-strand, UL-listed, Type THHN wire.
   c. Cable Tray Grounding Jumper:
      1) Not smaller than No. 6 AWG and not longer than 12 inches (300 mm). If jumper is a wire, it shall have a crimped grounding lug with two holes and long barrel for two crimps. If jumper is a flexible braid, it shall have a one-hole ferrule. Attach with grounding screw or connector provided by cable tray manufacturer.

E. Connectors for Grounding and Bonding:
1. Description: Connectors appropriate for the application and suitable for the conductors and items to be connected; listed and labeled as complying with UL 467.
2. Unless otherwise indicated, use exothermic welded connections for underground, concealed and other inaccessible connections.
3. Unless otherwise indicated, use mechanical connectors, compression connectors, or exothermic welded connections for accessible connections.

F. Product(s):
1. Refer to parts list on T series drawings.

2.03 LABELING

A. Comply with TIA-606-B .

B. Comply with UL 969.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verify that work likely to damage grounding and bonding system components has been completed.

B. Verify that field measurements are as indicated.

C. Verify that conditions are satisfactory for installation prior to starting work.

3.02 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Perform work in accordance with NECA 1 (general workmanship).

C. Comply with TIA-607-C.

D. Make grounding and bonding connections using specified connectors.
   1. Remove appropriate amount of conductor insulation for making connections without cutting, nicking or damaging conductors. Do not remove conductor strands to facilitate insertion into connector.
   2. Remove nonconductive paint, enamel, or similar coating at threads, contact points, and contact surfaces.
   3. Exothermic Welds: Make connections using molds and weld material suitable for the items to be connected in accordance with manufacturer's recommendations.
   4. Mechanical Connectors: Secure connections according to manufacturer's recommended torque settings.
   5. Compression Connectors: Secure connections using manufacturer's recommended tools and dies.

3.03 TELECOMMUNICATIONS MAIN GROUND BUSBAR (TMGB)

A. Where a panelboard (electrical power panel) is located in the same room or space as the TMGB that panelboard’s alternating current equipment ground (ACEG) bus (when equipped) or the panelboard enclosure shall be bonded to the TMGB.

B. The TMGB should:
   1. Be located in the telecommunications entrance facility.
   2. Have a mounting height adjusted to accommodate overhead or underfloor cable routing.
   3. Minimize the length of bonding conductor for telecommunications.
   4. Be located near backbone cabling and associated terminations.
   5. Serve telecommunications equipment that is located within the same room space.

C. Attachments to TMGB:
   1. Bonding Conductor – Electrical Distribution Panel.
   2. Building Steel.
   3. Outside plant cables.
   4. Backbone cables that incorporates a shield or metallic member.
   5. All metallic pathways for telecommunications cabling located within the same room or space as the TMGB.
   6. Cable tray.
   7. Ladder rack.
   8. Conduit – via grounding hubs.
   9. Telecommunications equipment located in the telecommunications equipment room.
   10. TBB.

3.04 TELECOMMUNICATION GROUND BUSBAR (TGB)

A. The TBG shall:
   1. Maintain 36” separation from active electronics
   2. The TGB is the grounding connection point for telecommunications systems and equipment in the area served by that telecommunications room or equipment room.

3. Where a panelboard is located in the same room or space as the TGB that panelboard's ACEG bus (ac electrical ground when equipped) or the panelboard enclosure shall be bonded to the TGB. When a panelboard for telecommunications equipment is not in the same room or space as the TGB, that TGB should be bonded to the panelboard that feeds the distributor.
4. The TBBs and other TGBs within the same space shall be bonded to the TGB with a conductor the same size as the TBB.
5. Where a grounding equalizer (GE) is required, it shall be bonded to the TGB.

3.05 TELECOMMUNICATIONS BONDING BACKBONE (TBB)

A. The intended function of a TBB is to reduce or equalize potential differences between telecommunications systems. While the TBB will carry some current under AC power ground fault conditions, it is not intended to provide the only ground fault return path.

B. The TBB shall:
1. Be connected to the TMGB.
2. Be a continuous copper 3/0 AWG conductor.
3. Be consistent with the design of the telecommunications backbone cabling system.
4. The TBB conductors shall be installed and protected from physical and mechanical damage.
5. The TBB conductors should be installed without splices.
a. Where splices are necessary, the number of splices should be a minimum and they shall be accessible and located in telecommunications spaces.
b. Joined segments of a TBB shall be connected using exothermic welding, irreversible compression-type connectors, or equivalent.

C. Permit multiple TBBs as dictated by the building size.

D. The metallic cable shield shall not be used as a TBB.

3.06 TELECOMMUNICATIONS EQUIPMENT BONDING CONDUCTOR

A. Connects the TMGB or TGB to equipment racks/cabinets

B. Shall be a continuous copper conductor that should be sized per the length of cable.

C. Shall be separated from ferrous materials by 2" or be bonded to the ferrous metal
1. May be routed within cable trays or suspended 2" under or off the side of the cable tray or ladder rack

D. Shall be supported every 3ft

E. 8" Bend radius – with no less than a 90 degree bend

F. May come in contact with other cable groups at a 90 degree angle only

G. Cable shields do not satisfy the requirements of a TEBC

H. There may be more than one TEBC within each telecommunication room.

3.07 RACK BONDING CONDUCTOR

A. A bonding conductor used to connect the rack/cabinet directly to the TMGB or TGB.

B. Metallic enclosures, including telecommunications cabinets and racks, shall be bonded to the TMGB or TGB using a minimum sized conductor of No. 6 AWG.

C. Cabinets, racks, and other enclosures in computer rooms shall not be bonded serially; each shall have their own dedicated bonding conductor to the TMGB or TGB.

3.08 ELECTRICAL DISTRIBUTION PANEL

A. When located in the same room as the TMGB or TGB, the EDP's equipment grounding bus or the panel board enclosure shall be bonded to the TMGB/TGB

B. Use a 3/0 AWG bonding conductor.

C. A qualified electrician shall make all connections within an AC electrical panel.

D. Outside of the scope of TIA-607-C.

3.09 CONDUCTIVE FIBER OPTIC CABLES

A. The metallic components of a conductive cable are capable of transmitting current.

B. Conductive fiber-optic cables should be bonded and grounded as specified in NEC Article 770.100

3.10 LADDER RACK AND/OR CABLE TRAY

A. To achieve the objective of potential equalization in the TR, all cable runway sections are bonded together and bonded back to the TMGB or TGB.

B. Maintain a 8” Bend Radius on the telecommunications equipment bonding conductor.

C. Keep a 2” separation from other cables, power and telecommunications.

D. Remove any paint, oxidation, ect. from the runway surfaces that are being bonded.

E. Drill two holes as required to accommodate the 2-hole compression lug.

F. Apply a thin coat of antioxidant around the holes and on the surface where the lug will be in contact.

G. Attach straps to the runway using stainless steel hardware sized for the lug holes.

H. Tighten the hardware.

I. Wipe off any excess antioxidant after installation of the lug.

3.11 LABELING

A. The format for the telecommunications main grounding busbar shall be FS-TMGB, while the format for the TGBs shall be FS-TGB.
   1. FS is the telecommunications space identifier for the space containing the busbar; floor & space.
   2. TMGB is the portion of an identifier designating a telecommunications main grounding busbar.
   3. TGB is the portion of the identifier designating a telecommunications grounding busbar.

3.12 FIELD QUALITY CONTROL

A. Investigate and correct deficiencies where measured ground resistances do not comply with specified requirements.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Perform tests and inspections.

D. Tests and Inspections:
   1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
   2. Test the bonding connections of the system using an ac earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing a TMGB and a TGB and using the process recommended by BICSI TDMM. Conduct tests with the facility in operation.
      a. Measure the resistance between the busbar and the nearest available grounding electrode. The maximum acceptable value of this bonding resistance is 100 milliohms.
   3. Test for ground loop currents using a digital clamp-on ammeter, with a full-scale of not more than 10 A, displaying current in increments of 0.01 A at an accuracy of plus/minus 2.0 percent.
      a. With the grounding infrastructure completed and the communications system electronics operating, measure the current in every conductor connected to the TMGB and each TBG. Maximum acceptable ac current level is 1 Amp.

E. Excessive Ground Resistance: If resistance to ground at the BCT exceeds 5 ohms, notify Architect promptly and include recommendations to reduce ground resistance.

F. Grounding system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Inspecting Contractor shall verify that any conduit longer than 3 feet through which a grounding conductor passes is properly bonded to the grounding conductor as described in this document.

I. During inspections contractor shall verify compliance with all stipulations specified in this document and compliance with all regulatory references (Standards and Codes) cited.

J. All opens or gaps in the bonding system during final inspections will be recorded in the inspection report and remedied.

K. All bonded connections failing the test described above shall be remedied and retested by the installation contractor at contractor's expense.

SECTION 270528 - PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES:

A. Telecom Outlets (TO)
B. Horizontal Distribution Systems
C. Station Conduits
D. Junction Box Requirements for Stations Conduits
E. Service Entrance Conduits
F. Pathway Requirements for Entrance Conduits
G. Riser Conduits
H. Firestopping

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.
B. Section 270526 - Grounding and Bonding for Communications Systems.
C. Section 270536 - Cable Trays for Communications Systems
D. Section 260529 - Hangers and Supports for Electrical Systems.
E. Section 270500 - Common Work Results for Communications.
F. Section 271100 - Communications Equipment Room Fittings.
G. Section 271300 - Communications Backbone Cabling
H. Section 271500 - Communications Horizontal Cabling

1.03 REFERENCE STANDARDS

A. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems 2013a.
B. BICSI TDMM - Telecommunications Distribution Methods Manual, 13th Edition 2014.
C. NECA/BICSI 568 - Standard for Installing Building Telecommunications Cabling; National Electrical Contractors Association 2006.
D. NEMA FG 1 - Fiberglass Cable Tray Systems 1993 (with Rev 1; 1994).
E. NEMA VE 1 - Metal Cable Tray Systems 2009.
F. NEMA VE 2 - Cable Tray Installation Guidelines 2013, with Errata 2016.
G. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
H. NFPA 70B - Recommended Practice for Electrical Equipment Maintenance Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
I. NFPA 70E - Standard for Electrical Safety in the Workplace 2015.
J. TIA-569-D - Telecommunications Pathways and Spaces 2015d, with Addendum (2016).
K. TIA-606-B - Administration Standard for Telecommunications Infrastructure Rev B, 2012 (with Addenda; 2015).
L. UL 1479 - Standard for Fire Tests of Penetration Firestops Current Edition, Including All Revisions.

1.04 DEFINITIONS

A. ARC: Aluminum rigid conduit.
B. GRC: Galvanized rigid conduit.
C. IMC: Intermediate metal conduit.

D. RTRC: Reinforced thermosetting resin conduit.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer’s standard catalog data for specified products demonstrating compliance with referenced standards and listing numbers of systems in which each product is to be used.

C. Shop Drawings: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance ratings.

D. Manufacturer's Instructions: Submit manufacturer’s printed installation instructions.

1.06 QUALITY ASSURANCE

A. Comply with requirements of NFPA 70.

B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three (3) years documented experience.

C. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

D. Products/Systems: Provide firestopping systems that comply with the following requirements:
   1. Firestopping tests are performed by a qualified, testing and inspection agency. A qualified testing and inspection agency is UL, or another agency performing testing and follow-up inspection services for firestop system acceptable to authorities having jurisdiction.
   2. Firestopping products bear the classification marking of qualified testing and inspection agency.

E. Installer Qualifications: Experience in performing work of this section who is qualified by the firestopping manufacturer as having been provided the necessary training to install firestop products in accordance with specified requirements.

F. All cable and equipment shall be installed in a neat and workmanlike manner. All methods of construction that are not specifically described or indicated in the contract documents shall be subject to the control and approval of the Owner or Owner Representative. Equipment and materials shall be of the quality and manufacture indicated. The equipment specified is based upon the acceptable manufacturers listed. Where “approved equal” is stated, equipment shall be equivalent in every way to that of the equipment specified and subject to approval.

G. Strictly adhere to all Building Industry Consulting Service International (BICSI) and Telecommunications Industry Association (TIA) recommended installation practices when installing communications/data cabling.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store products in accordance with manufacturer's instructions and NEMA VE 2.

B. Handle products carefully to avoid damage to finish.

C. Delivery:
   1. Manufacturer’s original, unopened, undamaged containers, identification labels intact identifying product and manufacturer, date of manufacture; lot number; shelf life, if applicable; qualified testing and inspection agency’s classification marking; and mixing instruction for multicomponent products.
   2. Handle and store products according to manufacturer’s recommendations published in technical materials. Leave products wrapped or otherwise protected and under clean and dry storage conditions until required for installation.

D. Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.

1.08 PROJECT CONDITIONS

A. Do not install firestopping products when ambient or substrate temperatures are outside limitations recommended by manufacturer.

B. Do not install firestopping products when substrates are wet due to rain, frost, condensation, or other causes.

C. Maintain minimum temperature before, during, and for a minimum 3 days after installation of materials.

D. Do not use materials that contain flammable solvents.

E. Coordinate construction of openings and penetrating items to ensure that through-penetration firestop systems are installed according to specified requirements.

F. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.

G. Schedule installation of firestopping after completion of penetrating item installation but prior to covering or concealing of openings.

PART 2 PRODUCTS

2.01 TELECOM OUTLETS (TO)

A. New construction TO consists of one (1) 4 inches square by 2-1/8" deep (100 mm square by 60 mm deep) flush mounted box. Each outlet box shall have a EMT conduit stubbed above the drop ceiling or extended into the hallway cabletray. Conduits size is as follows:
   1. For Outlets with 3 or less cables, use a 1” EMT conduit
   2. For Outlets with 3-6 cables, use a 1.25” EMT conduit
   3. For all other sizes, calculate fill ratio at 40% for proper sized conduit

B. Existing surface-mounted construction TO typically consists of surface-mounted raceway including base, cover, end fitting, entrance end fitting, and (2) 1" EMT conduits stubbed out top of entrance end fitting to above ceiling or out to nearest hallway distribution system. Size of the raceway is site dependent based on number of conductors to be installed.

C. The intent of the installation of the TOs which consist of the raceway is as follows:
   1. Where ceilings are accessible, the raceway and entrance end fitting shall extend above the ceiling and the conduits installed above the ceiling in the room to the nearest hallway distribution system.
   2. Where ceilings are partially accessible, or if the Drawings and/or Specifications indicate installation of access panels, the raceway shall extend above the ceiling and the conduits installed above the ceiling in the room to the nearest hallway distribution system.
   3. Where ceilings are inaccessible or no ceilings exist, the raceway shall extend up as close to the ceiling as practical to allow installation of conduits as high as possible to the nearest hallway distribution system.

2.02 HORIZONTAL DISTRIBUTION SYSTEMS

A. Conduit System (Renovations only, where conduit exists)
   1. Provide conduits secured to wall above corridor ceilings as shown on the Drawings or as specified herein for installation of telecommunications cables.
   2. Corridor conduits shall be 4" EMT, furnished in 10 foot lengths wherever possible, with no sharp edges, reamed as necessary, evenly supported at two locations per 10-foot section spacing. Conduits shall be sized and quantified to account for handling cables in all TO conduits at 40% fill back to the TR and/or ER rooms. Verify size prior to installation. Bushings and/or connectors on ends of EMT are required.
   3. All conduits shall be installed stacked and attached to walls unless conditions exist which prohibit this type of installation. When this condition exists, mount conduits side-by-side supported with 3/8” rod attached to building structure utilizing unistrut channel to form a trapeze. Double nut the top and bottom at the unistrut. Utilize conduit clamp to secure conduits to unistrut.

4. Provide measured pull line in each conduit rated at 1200 lbs. minimum. Increments must be in 12” steps.
5. Grounding of conduits is not required per NEC #250-33, Exception No. 2. shall be painted except conduit above suspended ceilings or in mechanical, electrical or telecommunication rooms. Color to match that of surface installed upon or as directed by Owner’s Representative. Coordinate with other trades prior to painting.
6. Provide restorable fire stops inside and around conduits as recommended by UL 1479 or ASTM E814 for all conduits penetrating fire-rated construction. Fire rated construction to be verified with AHJ.

B. Corridor Cable Tray System
1. Complete wall mounted or suspended aluminum cable tray system and necessary accessories shall be provided as shown on plans. Install entire cable tray system in accordance with manufacturer’s minimum installation practices and all local governing codes.
2. Coordinate installation of cable tray with other trades to allow a minimum of 12” above, 12” in front, and 12” below of clearance from piping, conduits, ductwork, etc. Allowance must be provided for access to the tray with reasonable room to work. Obstructions to the tray must be minimized and cannot block more than 6 feet of the tray at any point in the run.
3. Cable tray shall not be loaded beyond 60% of manufacturer’s recommended load capacity.
4. Where a new cable tray distribution system encounters a wall, install sufficient re-enterable firestopping assemblies through the wall so cabling does not exceed 40% fill.
5. Where cable tray is exposed below ceiling, install the appropriate solid bottom inserts to conceal cables.
6. Install cable tray dropouts where large quantities of cables exit the distribution system.
7. Cable tray must be sized to facilitate sufficient growth capacity for migration cable plant to coexist in same tray as existing cable plant, wherever possible.
8. Manufacturer of cable tray in corridors and telecom rooms shall be:
   a. Refer to parts list on T series drawings.

C. Telecommunication Room Cable Tray System
1. TR cable tray shall completely wrap all walls within the room. Cable tray shall extend over all equipment frames.
2. Cable tray shall be a minimum width of 2” high x 12” wide. Cable tray may be sized upwards if fill ratio requirements need to be met based on cable quantities.
3. Cable tray shall be 12 inch cable runway.
4. Manufacturer of cable tray in telecom rooms shall be:
   a. Refer to parts list on T series drawings.

D. Re-enterable Firestopping Assemblies
1. EZ-Path Series 44 and multi-gang wall mount bracket, w/ radius control fittings.
   a. Refer to parts list on T series drawings.

E. Cable Supports
1. J-hooks Description: Prefabricated sheet metal cable supports for telecommunications cable.
2. Manufacturers: Subject to compliance with requirements, provide by the following. For requirements regarding Substitutions for Cause see Division 01.
   a. Erico
   b. Owner approved Equal.
3. Listed and labelled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
4. Comply with TIA-569-D.
5. Stainless steel.
6. J or U shape, based on usage.
7. Provide J-hooks as specified in Drawings. J hooks shall be wide based and sized appropriately to allow correct fill ratio with 20% expansion.

8. Utilize the appropriate attachment hardware as required (i.e., straps, clamps, brackets, etc.)

F. All open pathway/trays shall be installed a minimum of six (6) inches away from any light fixture or other source of EMI (Electromagnetic Interference).

G. All pathways shall be grounded per NEC Article 250.

H. Provide external grounding strap at expansion joints, sleeves and crossover and at other locations where pathway/tray continuity is interrupted.

I. Support all pathways from building construction. Do not support pathways from ductwork, piping, or equipment hangers.

J. Install cable tray level and straight unless noted on the construction drawings

2.03 STATION CONDUITS

Station conduit is defined as conduit that originates at the TO and rises within the walls or is exposed from a raceway and extends up into the drop ceiling or over to the hallway distribution system.

A. Provide station conduits from TOs to above the drop ceiling or extend over to the hallway distribution systems consisting of 1” EMT minimum or appropriate size as shown on the Drawings or as specified herein for installation of telecommunications cables.

B. Provide an insulating press fit bushing on all telecommunications conduits including interconnecting nipples and stub to distribution system. To prevent conflicts with other cables or conduits to cable tray, the conduit shall be stubbed not less than 6" above or below conduit/cable tray center line. Where space permits, every effort shall be made to bend station conduits down such that the flow of installed cables promotes the minimum length back to the TR and the least amount of bends in the cables. Bushings must be rated to be used in an environmental air handling space (Plenum).

C. Manufacturer of insulating bushing on all telecommunication conduits shall be:

D. Provide measured pull line in 12” increments in each empty conduit to hallway distribution system.

E. Indelibly mark station conduit at hallway distribution end with Room # that conduit serves.

F. The use of 90-degree electrical pulling elbows is prohibited.

G. Do not include more than two 90-degree bends between pulling points when installing station conduit runs. If the path of the station conduits requires more than 180 degrees of total bends, installation of an appropriate sized junction box is required. See section 2.4 for junction box requirements.

H. Place an appropriate sized junction box in each individual station conduit run that exceeds 100 feet in length.

I. The use of a third bend in a conduit is only acceptable if:
1. The total conduit run is reduced by 15%.
2. The conduit size is increased to the next trade size.
3. One of the bends is located within 12” of the cable feed end.

2.04 JUNCTION BOX REQUIREMENTS FOR STATION CONDUITS

A. If the station conduit route exceeds the 180 degree of total bends limitation, an appropriate sized junction box is required within a straight section of the conduit run.

B. Each station conduit run requires a separate junction box. The sharing of a junction box by multiple conduits is prohibited.

C. A junction box shall not be used in place of a bend. All junction boxes in station conduit paths shall be installed within a straight section of the conduit run.

2.05 SERVICE ENTRANCE CONDUITS

A. Minimum of two (2) 4" IMC conduits shall be installed from the nearest utility tunnel on outside of the building as shown on the Drawings.

B. Terminate entrance conduits entering Enterance Rooms (ER) from below grade to extend 4" above finished floor. Location of entrance conduits shall be within 12” of room corners.

C. Terminate entrance conduits entering ER rooms from above ceiling height to extend 4" below finished ceiling or 12” above cable tray.

D. Terminate entrance conduits entering an ER rooms from below ceiling height to extend 4" into the room.

E. Entrance conduits shall be continuous into the building and to the ER. Securely fasten all entrance conduits to the building to withstand any cable placing operation. Do not include more than two 90-degree bends between pulling points when installing entrance conduits.

F. On exterior wall penetrations, seal both sides of the wall around outside of conduit with hydraulic cement to prevent water from entering the building. Seal the inside of the conduit on both sides with conduit plugs, water plugs, or duct sealer to prevent water, vapors, or gases from entering the building.

2.06 PATHWAY REQUIREMENTS FOR ENTRANCE CONDUITS

A. If the entrance conduits exceed the 180 degree of total bends limitation, an appropriate sized junction box, manhole, or handhole is required.

B. As-built drawings of entrance conduit path required to be submitted to Owner’s Representative before covered with soil.

2.07 RISER CONDUITS

Riser conduits shall only be used when noted on the Construction Documents for special applications only. As a rule, riser conduits are not required for the riser system. However, when required:

A. Minimum of two (2) 4" conduits shall be installed between the ER room and each TR room as shown on the Drawings.

B. Conduits entering ER and TR rooms shall be reamed or bushed and terminated not more than 4" from entrance wall and within 12” of room corners.

C. Conduits entering ER and TR rooms from below floor shall be terminated not more than 4" above finished floor.

D. Conduits for riser cables shall be continuous and separate from all other conduit or enclosed raceway systems. Do not include more than two 90-degree bends between pulling points when installing riser conduits. Where junction boxes are required, locate in accessible areas, such as above suspended ceilings in hallways.

E. Conduits shall not be less than 4" trade size and be equipped with a measured pull line at 12” increments rated at a minimum 1200-pound test.

F. Provide restorable fire stops inside and around conduits as recommended by UL 1479 or ASTM E814 for all conduits penetrating fire-rated construction. Fire-rated construction to be verified with AHJ.

G. Provide an insulating press fit bushing on all telecommunications riser conduits. Bushings must be rated to be used in an environmental air handling space (Plenum).

H. Riser conduits shall not be used for the distribution of horizontal cables.

2.08 FIRESTOPPING

A. General: Use only firestopping products that have been tested for specific fire resistance rated construction conditions conforming to construction assembly type, penetrating item type, annular space requirements, and fire rating involved for each separate instance.

B. In all buildings, floor/ceiling assemblies, stairs, and elevator penetrations must be sealed with a 2-hour fire stop assembly at a minimum, unless otherwise noted.

C. Contact Owner’s Representative to identify walls which are fire-rated construction. Walls must be sealed with a 2-hour fire stop assembly at a minimum.

D. Communication pathways requiring fire stopping shall utilize removable/re-usable fire stopping putties for ease of Moves, Adds, and Changes.

E. All fire stopping penetrations shall conform to the recommended practices listed in UL 1479 or ASTM E814.

PART 3 EXECUTION

3.01 GENERAL REQUIREMENTS

A. The intention of the telecommunications conduits is to provide a route between ER and TR rooms, routes from the TRs throughout building floors to hallways, and routes from hallway distribution systems into rooms to individual TOs for telecommunications cabling.

B. Installation of new pathways shall not interfere with existing pathways in such a way that installation of new cables within the existing pathway is made more difficult.

3.02 EXAMINATION

A. Before beginning installation, verify that substrate conditions previously installed under other sections are acceptable for installation of firestopping in accordance with manufacturer’s installation instructions and technical information.

B. Surfaces shall be free of dirt, grease, oil, scale, laitance, rust, release agents, water repellants, and any other substances that may inhibit optimum adhesion.

C. Provide masking and temporary covering to protect adjacent surfaces.

D. Examine areas to receive cable management system. Notify the Owner’s Representative of conditions that would adversely affect the installation or subsequent utilization of the system.

E. Do not proceed with installation until unsatisfactory conditions are corrected.

3.03 INSTALLATION

A. General: Install through-penetration firestop systems in accordance with Performance Criteria and in accordance with the conditions of testing and classification as specified in the published design.

B. Manufacturer’s Instructions: Comply with manufacturer’s instructions for installation of firestopping products.

C. Install in accordance with recognized industry practices, to ensure that the equipment complies with requirements of the NEC, and applicable portions of NFPA 70B and NECA "Standards of Installation" pertaining to general electrical installation practice.

D. Coordinate installation with other trades.

E. Field verification is required before installation.

F. Install cable management system at locations indicated on the drawings and in accordance with manufacturer's instructions.

3.04 FIELD QUALITY CONTROL

A. Inspections: Owner shall engage qualified independent inspection agency to inspect through-penetration firestop systems.

B. Keep areas of work accessible until inspection by authorities having jurisdiction.

C. Where deficiencies are found, repair firestopping products so they comply with requirements.

3.05 ADJUSTING AND CLEANING

A. Remove equipment, materials, and debris, leaving area in undamaged, clean condition.

B. Clean all surfaces adjacent to sealed openings to be free of excess firestopping materials and soiling as work progresses.

SECTION 271100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 GENERAL

1.01 SUMMARY

A. This section covers the basic materials and installation methods for telecommunications work in equipment rooms.

B. Section includes:
   1. Telecommunications mounting elements.
   2. Telecommunications equipment racks and cabinets.
   3. Backboards.
   4. Grounding.

1.02 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. LAN: Local area network.

C. RCDD: Registered Communications Distribution Designer

1.03 RELATED REQUIREMENTS

A. Section 078400 - Firestopping.

B. Section 260526 - Grounding and Bonding for Electrical Systems.
   1. Includes intersystem bonding termination.
   2. Includes bonding jumpers for bonding of communications systems and electrical system grounding.

C. Section 260536 - Cable Trays for Electrical Systems.

D. Section 270500 - Common Work Results for Communications.

E. Section 271300 - COMMUNICATIONS BACKBONE CABLING.

F. Section 271500 - Communications Horizontal Cabling.

G. Section 28 0513 - Conductors and Cables for Electronic Safety and Security.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. See Section 016000 - Product Requirements, for submittal requirements of factory fabricated items.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

D. Sustainable Design Documentation: Submit manufacturer's product data on cable and cable insulation showing compliance with specified lead content requirements.

E. Shop Drawings: Show compliance with requirements on isometric schematic diagram of network layout, showing cable routings, telecommunication closets, rack and enclosure layouts and locations, service entrance, and grounding, prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).

F. Submit shop drawings for approval ten (10) days prior to start of work and prior to ordering of material to consist of one (1) set of reproducible and three (3) sets of prints of drawings, diagrams, and/or manufacturers' data in accordance with the contract documents.

G. Evidence of qualifications for installer.

1.05 QUALITY ASSURANCE

A. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

B. Manufacturer Qualifications: At least 3 years experience manufacturing products of the type specified.

C. Installer Qualifications: A company having at least 3 years experience in the installation and testing of the type of system specified, and:
   1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
   2. Supervisors and installers factory certified by manufacturers of products to be installed.
   3. Employing BICSI Registered Cabling Installation Technicians (RCIT) for supervision of all work.

D. Products: Listed, classified, and labeled as suitable for the purpose intended.

E. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

F. All work shall combine with National Electrical Code and all applicable local codes.

G. All equipment and accessories shall be the product of manufacturers regularly engaged in their manufacture. All items of a given type shall be the products of the same manufacturer.

H. Furnish all materials, equipment and accessories new and free from defects.

I. All electrical equipment shall be listed by Underwriters' Laboratories, Inc. (UL) or bear UL labels.

J. Supply all equipment and accessories in complete compliance with and in accordance with the applicable standards listed in reference standards of this Section and with all applicable national, state and local codes.

PART 2 PRODUCTS

2.01 SYSTEM DESIGN

A. Main Distribution Frame (MDF): Centrally located support structure for terminating horizontal cables that extend to telecommunications outlets, functioning as point of presence to external service provider.
   1. Locate main distribution frame as indicated on the drawings.

B. Intermediate Distribution Frames (IDF): Support structures for terminating horizontal cables that extend to telecommunications outlets.
   1. Locate intermediate distribution frames as indicated on the drawings.

C. Entrance Facilities: Contains the cables, network demarcation point(s), connecting hardware, protection devices and other equipment that connect to the access provider (AP) or private network cabling. It includes connections between outside plant and inside building cabling.

D. Backbone Cabling: Cabling, pathways, and terminal hardware connecting intermediate distribution frames (IDF's) with main distribution frame (MDF), wired in star topology with main distribution frame at center hub of star.

E. Cabling to Outlets: Specified horizontal cabling, wired in star topology to distribution frame located at center hub of star; also referred to as "links".

2.02 BACKBOARDS

A. Backboards: Interior grade plywood without voids, 3/4 inch thick; UL-labeled fire-retardant.
   1. Size: 48 by 96 inches.
   2. Do not paint over UL label.

2.03 EQUIPMENT FRAMES, RACKS AND CABINETS:

A. Component Racks: EIA/ECA-310 standard 19 inch wide.

B. Floor Mounted Racks: Aluminum or steel construction with corrosion resistant finish; vertical and horizontal cable management channels, top and bottom cable troughs, and grounding lug.

C. Freestanding Cabinets: Front and rear doors with locks; removable side panels with locks; vented top and rear door; adjustable leveling feet; cable access in roof and base; grounding bar.

D. Cabinets: Steel construction with corrosion resistant finish.

E. Locks: Keyed alike.

F. Cable Management:
   1. Metal with cable retaining fingers or cover.
   2. Vertical cable management shall be dual sided with front and rear channels, with covers.
   3. Provide a horizontal cable manager at the top of each floor mounted rack with a minimum size of 2 RMU.

G. Product(s):
   1. Refer to parts list on T series drawings.

2.04 GROUNDING AND BONDING COMPONENTS

A. Comply with TIA-607.

B. Comply with Section 27 0526.

C. Wall-mount Busbars (TGB and TMGB)
   1. Meet BICSI and TIA-607-C requirements for network systems grounding applications.
   2. Employ BICSI hole spacing to fit LCC-W series 2-hole lugs.
   3. Be made of high conductivity copper and tin-plated to inhibit corrosion.
   4. Come pre-assembled with brackets and insulators attached for quick installation.

2.05 LABELING

A. Comply with TIA-606.

B. Comply with UL 969.

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA-568 (SET) (cabling), TIA-569 (pathways), TIA-607 (grounding and bonding), NECA/BICSI 568, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Comply with Communication Service Provider requirements.

C. Comply with BICSI TDMM for layout and installation of communications equipment rooms.

D. Grounding and Bonding: Perform in accordance with TIA-607 and NFPA 70.

E. Coordinate layout and installation of communications equipment with Owner's telecommunications and LAN equipment and service suppliers.

F. Coordinate service entrance arrangement with local exchange carrier.

G. Power raceways and receptacles shall be coordinated with locations of communications equipment requiring electrical power to operate.

H. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

I. Follow manufacturers' instructions for installing all telecommunications cabling. Where instructions are unavailable, follow approved industry practice.

J. Compare communications drawings and specifications with the drawings and specifications of other trades, report any discrepancies to the Consultant; and obtain written instructions for changes necessary in the work. Include most stringent requirements in bid.

K. Repairs or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

L. Clean up all debris generated by installation activities and discard as directed by the Construction Manager.

M. Maintain a current copy of this Specification and related Drawings at the job site at all times.

3.02 INSTALLATION OF EQUIPMENT AND CABLING

A. Wall-Mounted Racks and Enclosures:
   1. Install to plywood backboards only, unless otherwise indicated.
   2. Mount so height of topmost panel does not exceed 78 inches above floor.

B. Floor-Mounted Racks and Enclosures: Permanently anchor to floor in accordance with manufacturer's recommendations.

C. Floor-Mounted Enclosures: Connect adjacent cabinets together and remove interior side panels.

D. Cabling:
   1. Do not bend cable at radius less than manufacturer's recommended bend radius; for unshielded twisted pair use bend radius of not less than 4 times cable diameter.
   2. Do not over-cinch or crush cables.
   3. Do not exceed manufacturer's recommended cable pull tension.
   4. Furnish and install communications cables per the drawings and specifications provided by the Consultant and per manufacturer's recommendations.

E. For power raceways and receptacles, coordinate location with locations of communications equipment requiring electrical power to operate.

3.03 FIRE STOPPING

A. Comply with Section 27 0300.

B. Comply with requirements in Section 078413 "Penetration Firestopping."

C. Comply with TIA-569-B, Annex A, "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

E. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by Article 300-21 of the National Electric Code.

F. Use sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM E 119, and NFPA 251 and the hose stream test in accordance with UL 1OB.

3.04 GROUNDING AND BONDING COMPONENTS

A. Comply with TIA-607.

B. Comply with Section 27 0526.

C. Grounding shall be installed according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

D. Locate grounding bus bar to minimize length of bonding conductors.

E. Grounding bus bar shall be connected to a suitable electrical building ground with a minimum of a No. 4 AWG grounding electrode conductor.

F. Metallic equipment shall be grounded to the grounding bus bar with a minimum of No. 6 AWG equipment grounding conductor.

3.05 IDENTIFICATION

A. Use identification nameplate to identify cross-connection equipment, equipment racks, and cabinets.
   1. Unless otherwise noted, use a permanent adhesive label stock, covered with a permanent water-resistant sealer.

B. Comply with TIA/EIA-606-A for identification of system components, wiring, and cabling.

C. Comply with requirements in Section 26 0553 "Identification for Electrical Systems."

D. Comply with requirements in Section 09 9123 "Interior Painting" for painting backboards.
   1. For fire-resistant plywood, do not paint over manufacturer's label.

E. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for Class 2 level of administration including optional identification requirements of this standard.

F. Labels shall be preprinted or computer-printed type. Hand written labels are unacceptable.

END OF SECTION

SECTION 271300 - COMMUNICATIONS BACKBONE CABLING

PART 1 GENERAL

1.01 SUMMARY

A. This section covers the basic materials and installation methods for backbone cabling.

B. Section includes:
   1. Pathways.
   2. UTP cable and cable connection hardware.
   3. 8.3/125 and 50/125-micrometer, optical fiber cabling, and cable connecting hardware.
   4. Coaxial cable and cable connecting hardware.
   5. Cabling identification products.

C. Examine the contract documents in their entirety (including drawings and specification sections in the other divisions) for requirements or work which may affect work under this section, regardless of whether such requirements or work are specifically indicated in this section.

D. Related Sections
   1. Section 260526 - Grounding and Bonding for Electrical Systems.
   2. Section 270500 - Common Work Results for Communications.
   3. Section 270526 - Grounding and Bonding for Communications Systems.
   4. Section 271100 - Communications Equipment Room Fittings.
   5. Section 271500 - Communications Horizontal Cabling.

1.02 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. Cross–Connect: equipment used to terminate and tie together communications circuits.

C. EMI: Electromagnetic interference.

D. FDE: Fiber Distribution Enclosure.

E. IDC: Insulation displacement connector.

F. LAN: Local area network.

G. RCDD: Registered Communications Distribution Designer.

H. UTP: Unshielded twisted pair.

1.03 REFERENCES

A. Most recent editions and addenda of the following documents:

B. TIA/EIA-568 series, most recent revisions, addenda and systems bulletins. All applicable.

C. TIA-569-D Telecommunications Pathways and Spaces, most recent revision including all relevant addenda and systems bulletins

D. TIA-606-B Administration Standard for Telecommunications Infrastructure, most recent revision including all addenda and systems bulletins

E. TIA-607-C Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises, most recent revision including all addenda and systems bulletins

F. ANSI/TIA–862 Structured Cabling Infrastructure Standard for Intelligent Building Systems, most recent revision including all addenda and systems bulletins

G. ANSI/TIA–942 Telecommunications Infrastructure Standard for Data Centers, most recent revision including all addenda and systems bulletins

H. BICSI Telecommunications Distribution Methods Manual (TDMM), most recent edition

I. National Electric Codes (NEC) – all applicable

J. Local Codes and Standards – all applicable

K. UL444 – Standard for Safety of Communications Cable

L. UL 1666 – Standard for Safety of Flame Propagation Height

M. Local Authority Having Jurisdiction (AHJ)

N. Anywhere cabling standards conflict with one another or with electrical or safety codes, Contractor shall defer to the NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.

O. Manufacturers' Recommendations - Install all cabling and termination devices per the manufacturers' recommended installation practices for the applications warranties.

P. Any violations of applicable standards or codes committed by the Contractor shall be remedied at the Contractor's expense.

1.04 BACKBONE CABLING

A. Backbone Cabling shall consist of cabling, pathways, and terminal hardware interconnecting entrance facilities, telecommunications equipment rooms, intermediate distribution frames (IDF's) with main distribution frame (MDF).
   1. Backbone cabling shall be wired in star topology with main distribution frame (MDF) at center hub of star.
   2. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.

B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities.

C. Bridged taps and splitters shall not be used as part of backbone cabling.

1.05 PERFORMANCE REQUIREMENTS

A. Backbone cabling system shall comply with transmission standards in TIA/EIA-568, when tested according to test procedures of this standard.
   1. TIA-568.2 for twisted-pair telecommunications cabling and components.
   2. TIA-568.3 for optical fiber cabling and components.
   3. TIA-568.4 for broadband coaxial cablig and components.

1.06 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. See Section 016000 - Product Requirements, for submittal requirements of factory fabricated items.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

E. Informational Submittals
   1. Qualification Data for layout technician, installation supervisor, and field inspector.
   2. Source quality-control reports.
   3. Field quality-control reports.
   4. Maintenance Data: For splices and connectors to include in maintenance manuals.

F. Closeout Submittals
   1. Device address list.

G. Project Record Documents: Prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).
   1. Record actual locations of distribution frames.
   2. Show as-installed color coding, pair assignment, polarization, and cross-connect layout.
   3. Identify distribution frames and equipment rooms by room number on drawings.

H. Field Test Reports.

1.07 QUALITY ASSURANCE

A. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

B. Manufacturer Qualifications: At least 3 years experience manufacturing products of the type specified.

C. Installer Qualifications: A company having at least 3 years experience in the installation and testing of the type of system specified, and:
   1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
   2. Supervisors and installers factory certified by manufacturers of products to be installed.
   3. Employing BICSI Registered Cabling Installation Technicians (RCIT) for supervision of all work.

D. Testing Agency Qualifications: An NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

E. Products: Listed, classified, and labeled as suitable for the purpose intended.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

G. All work shall combine with National Electrical Code and all applicable local codes.

H. All equipment and accessories shall be the product of manufacturers regularly engaged in their manufacture. All items of a given type shall be the products of the same manufacturer.

I. Furnish all materials, equipment and accessories new and free from defects.

J. All electrical equipment shall be listed by Underwriters' Laboratories, Inc. (UL) or bear UL labels.

K. Telecommunications pathways and spaces shall comply with TIA-569-D.

L. Grounding shall comply with TIA-607-C.

M. Supply all equipment and accessories in complete compliance with and in accordance with the applicable standards listed in reference standards of this Section and with all applicable national, state and local codes.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Keep stored products clean and dry.

C. Test cables upon receipt at Project site.
   1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical fiber flashlight.
   2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.
   3. Test each pair of UTP cable for open and short circuits.

1.09 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until:
   1. Spaces are dry and wet work is complete.
   2. HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.10 COORDINATION

A. Arrange for distribution spaces, space for equipment, chases, slots, and openings in building structure during progress of construction, to allow for telecommunications installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for telecommunication items requiring access that are concealed behind finished surfaces.

D. Coordinate layout and installation of telecommunications pathways and cabling with owner's telecommunications and LAN equipment and service suppliers.

E. The Communications Drawings indicate the work for the communications systems. The Architectural, Structural, and Mechanical Drawings contain certain information and details pertinent to the communications work. The telecommunications contractor should become familiar with all drawings and requirements pertinent to the work.

F. Drawings are diagrammatic and should not be used to obtain dimensional requirements by scaling the drawings.

G. Coordinate selection and application of sleeves with firestopping as specificed in Section 078400 - Firestopping.

PART 2 PRODUCTS

2.01 GENERAL

A. Refer to Section 270500 - Common Work Results for Communications for General Requirements.

B. All materials and products shall be:
1. Appropriate for the intended use.
2. Recognized as such by a Nationally Recognized Testing Laboratory (NRTL) such as Underwriters Laboratories (UL), ETL SEMCO (ETL), the Canadian Standards Association (CSA) or the American National Standards Institute (ANSI).
3. Permitted by the Authority Having Jurisdiction (AHJ).

C. All products shall be new, of the latest version at time of bid, and brought to the job site in original manufacturer's packaging. Used equipment and damaged material will be rejected.

D. Any modifications to equipment to suit the intent of the specifications shall be performed in accordance with these requirements.

E. Cable lubricants specifically designed for installing communications cable may be used as needed to reduce pulling tension when pulling cable into conduit.

F. Take care during installation to prevent scratches, dents, chips, etc. Equipment with significant or disfiguring cosmetic flaws will be rejected.

G. All components will be approved by the Engineer and shall have the most aesthetic value possible while maintaining specified functionality. Hardware shall:
1. Be in compliance with the Construction Documents.
2. Have fit and finish compatible with the existing surrounding structure.
3. Be unobtrusive.
4. Provide the required functionality.

H. Provide products that are suitable for the intended use, including, but not limited to environmental, regulatory, and electrical factors.

2.02 PATHWAYS

A. Pathways for communications cabling shall comply with TIA-569-D.

B. Conduit: As specified in Section 260533.13; provide pull cords in all conduit.

C. Boxes: As specified in Section 260533.16.
1. Outlet boxes shall be no smaller than 2 inch wide, 3 inch high, and 2-1/2 inch deep.

D. Cable Trays: As specified in Section 270536.

E. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.

1. Product(s):
    a. Refer to parts list on T series drawings.

2.03 BACKBOARDS

A. Backboards: Interior grade plywood without voids, 3/4 inch thick; UL-labeled fire-retardant.
    1. Size: 48 by 96 inches.
    2. Do not paint over UL label.

2.04 UTP COPPER CABLE AND TERMINATIONS

A. Manufacturers:
    1. Refer to parts list on T series drawings.

B. UTP Copper Backbone Cable:
    1. Description: 100 ohm, balanced twisted pair cable complying with TIA-568.2, ICEA S-90-661, and listed and labeled as complying with UL 444; arranged in 25-pair binder groups.
    2. Cable Type: TIA-568.2 Category 3 UTP (unshielded twisted pair); 24 AWG.
    3. Cable Capacity: Quantity of pairs as indicated on drawings.
    4. Cable Applications:
        a. Plenum Applications: Use listed NFPA 70 Type CMP plenum cable.
        b. Riser Applications: Use listed NFPA 70 Type CMR riser cable or Type CMP plenum cable.
    5. Cables shall be terminated with connecting hardware of same category or higher.
    6. Product(s):
        a. Refer to parts list on T series drawings.

C. Connecting Blocks:
    1. Type: 110-style IDC for Category 5e.
    2. Provide blocks for the number of cables terminated on the block, plus 25 percent spare.
    3. Integral with connector bodies, including plugs and jacks where indicated.
    4. Product(s):
        a. Refer to parts list on T series drawings.

D. Copper Cable Terminations: Insulation displacement connection (IDC) type using appropriate tool; use screw connections only where specifically indicated.

E. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between copper cables.

F. Patch Panel: Panels housing multiple-numbered jack units with IDC-type connectors at each jack for permanent termination of pair groups of installed cables.

G. Jacks and Connectors: Modular RJ-45, non-keyed, terminated with 110-style insulation displacement connectors (IDC); high impact thermoplastic housing; suitable for and complying with same standard as specified horizontal cable; UL 1863 listed.
    1. Performance: 500 mating cycles.
    2. Voice and Data Jacks: 8-position modular jack, color-coded for both T568A and T568B wiring configurations.
    3. Product(s):
        a. Refer to parts list on T series drawings.

H. Copper Patch Cords:
    1. Description: Factory-fabricated 4-pair cable assemblies with 8-position modular connectors terminated at each end.
    2. Length: 3 feet.
    3. Product(s):
        a. Refer to parts list on T series drawings.

2.05 FIBER OPTIC CABLE AND INTERCONNECTING DEVICES

A. Manufacturers:

1. Refer to parts list on T series drawings.

B. Fiber Optic Backbone Cable:
1. Description: Tight buffered, non-conductive fiber optic cable complying with TIA-568.3, TIA-598, ICEA S-83-596 and listed as complying with UL 444 and UL 1651.
2. Cable Type: Multimode, laser-optimized 50/125 um (OM4) complying with TIA-492AAAD.
3. Cable Capacity: Quantity of fibers as indicated on drawings.
4. Cable Applications:
a. Plenum Applications: Use listed NFPA 70 Type OFNP plenum cable.
b. Riser Applications: Use listed NFPA 70 Type OFNR riser cable or Type OFNP plenum cable.
5. Maximum Attenuation: 3.50 dB/km at 850 nm and 1.5 dB/km at 1300 nm
6. Minimum Modal Bandwidth: 160 MHz-km at 850 nm; 500 MHz-km at 1300 nm
7. Cable Jacket Color:
a. Laser-Optimized Multimode Fiber (OM3/OM4): Aqua.
b. Multimode Fiber (OM1/OM2): Orange.
c. Single-Mode Fiber (OS1/OS2): Yellow.
8. Product(s):
a. Refer to parts list on T series drawings.

C. Fiber Optic Interconnecting Devices:
1. Connector Type: Type LC.
2. Connector Performance: 500 mating cycles, when tested in accordance with TIA-455-21.
3. Maximum Attenuation/Insertion Loss: 0.3 db.
4. Product(s):
a. Refer to parts list on T series drawings.

D. Fiber Optic Cable Termination
1. Where cables are installed, the 900 µm buffer or 250 µm coated fibers contained in these cables may be terminated either by:
a. Cam-style mechanical splice connectors using a tool that provides calculated insertion loss at the point of termination.
2. Product(s):
a. Refer to parts list on T series drawings.
3.

2.06 GROUNDING AND BONDING COMPONENTS

A. Comply with TIA-607.

B. Comply with Section 260526.

2.07 LABELING

A. Comply with TIA-606.

B. Comply with UL 969.

PART 3 EXECUTION

3.01 INSTALLATION - GENERAL

A. Comply with latest editions and addenda of TIA-568 (SET) (cabling), TIA-569 (pathways), TIA-607 (grounding and bonding), NECA/BICSI 568, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Comply with Communication Service Provider requirements.

C. Grounding and Bonding: Perform in accordance with TIA-607 and NFPA 70.

D. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

E. Follow manufacturers' instructions for installing all telecommunications cabling. Where instructions are unavailable, follow approved industry practice.

F. Compare communications drawings and specifications with the drawings and specifications of other trades, report any discrepancies to the Consultant; and obtain written instructions for changes necessary in the work. Include most stringent requirements in bid.

G. Repairs or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

H. Provide any screws, anchors, clamps, tie wraps, distribution rings, miscellaneous grounding and support hardware, etc. needed to facilitate the installation of the cable plant system.

I. Furnish any special installation equipment or tools required to properly complete the installation.

J. All wiring, materials, and equipment must be listed and labeled by an NRTL. To certify that performance characteristics, meet ANSI/TIA 568 Standards, provide all Original Equipment Manufacturer (OEM) documentation to the Owner.

K. All techniques and fixtures used in the installation must minimize complexity must allow for easy maintenance of, and ready access to, all components for test measurements.

L. No self-tapping screws shall be used.

M. All parts shall be made of corrosion-resistant material, such as plastic, anodized aluminum, or brass.

N. All empty innerduct or conduit shall include a non-corrosive pull-rope.

O. All of the pathways shown on the drawings are suggested routes for the Contractor to use as guidelines. Prior to construction, the Contractor shall coordinate in the field with other trades to determine the exact feeder, tie, and riser backbone cabling pathways. In any case where the communication pathway must be removed and re-routed, due to conflicts with other trades with which the Contractor did not previously coordinate, the Contractor is responsible for all costs associated with the removal and relocation.

P. Clean up all debris generated by installation activities and discard as directed by the Construction Manager.

Q. Maintain a current copy of this Specification and related Drawings at the job site at all times.

3.02 WIRING METHODS

A. Wiring method: conceal conductors and cables in accessible ceilings, walls, and floors where possible.

B. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.03 OPTICAL FIBER CABLE

A. Install the optical fiber backbone in a continuous length from the FDE in the MDF to an FDE within each IDF.

B. Throughout its length, run the backbone cable in appropriate, listed raceway.

C. Throughout the length of the cable, maintain the minimum bend radius and pulling force recommended by the manufacturer and required by industry standards, both during installation and after termination and testing.

D. Route individual strands in the rear of the FDE in a neat and orderly fashion and place them so as not to create undue stress or micro bending of the strands.

3.04 CABLE BUNDLING MATERIALS

A. Secure all cable bundles with proper bundling or securing materials so as to ensure that the cable runs are securely held in place both vertically and horizontally.

B. Do not tighten bundling materials or securing devices so tightly that they deform the inherent cable geometry or construction.

C. Do not use cable ties or hook-and-loop tape to secure cable runs to other building systems such as electrical conduit, Electric Metallic Tube (EMT), sprinkler pipes, ceiling suspension members.

D. In environmental air-handling spaces, only use appropriately-listed materials.

3.05 BACKBONE CABLE TESTING

A. UTP Backbone Cable
1. Complete end-to-end test results for all copper UTP cables installed are required.
2. All multi-pair copper cable pairs installed shall be tested to TIA/EIA-568, Category 3, Category 5e, or Category 6 equivalent performance specifications. In addition, provide loop resistance measurements in ohms and dB loss at 1KHz, 8KHz, and 256KHz.
3. The owner is to be notified at least 24 hours prior to testing to allow observation at the Owner's discretion. If the Owner confirms his intention to observe, a reasonable starting time shall be agreed upon. Should the Owner not be present at the scheduled commencement time, the Contractor may begin testing as scheduled.
4. 100% of all pairs in bacbone copper cables shall be tested for continuity and wire-map.
5. Testing Format: Test Results must be submitted in two (2) formats. First, must be original file(s) down loaded from tester. Second, the file must be cohesively placed in Excel format with the following fields: ER/TR RM # / RM # of drop / Port # / all relevant test information in as many fields as necessary.
6. All test results are to be recorded and submitted to the Owner.

B. Optical Fiber Backbone Cable
1. Complete end-to-end test results for all Fiber Optic cables installed are required.
2. All fiber optic cable must be visually inspected and optically tested on the reel upon delivery to the installation site. Using an Optical Time Domain Reflectometer (OTDR), an access jumper with like fiber, a pigtail, and a mechanical splice, all fibers shall be tested for continuity and attenuation.
3. Testing for continuity and attenuation on the reel must confirm factory specifications to ensure that the fiber optic cable was not damaged during shipment. The test results must match the results of the factory-attached tag on the reel, or the fiber shall not be used. Reel data sheet must be provided showing test results.
4. End to end (bi-directional) test measurements shall be provided for single-mode and multimode fibers (2 wavelengths per test are required). Test results must be submitted for review as part of the installation inspection requirements. Test results shall be in paper form and electronic form, and must contain the names and signatures of the technicians performing the tests.
5. Testing shall be performed on 100% of the fibers in the completed end-to-end system. TIA/EIA-568, provides the technical criteria and formulae to be used in fiber optic testing.
6. Additionally, all fiber optic cable links must pass all installation and performance tests both recommended and mandated by the cable manufacturer.
7. The Owner is to be notified at least 24 hours prior to testing to allow observation at the Owner's discretion. If the Owner confirms his intention to observe, a reasonable starting time shall be agreed upon. Should the Owner not be present at the scheduled commencement time, the Contractor may begin testing as scheduled.
8. Testing Format: Test Results must be submitted in two (2) formats. First, must be original file(s) down loaded from tester. Second, the file must be cohesively placed in Excel format with the following fields: ER/TR RM # / RM # of drop / Port # / all relevant test information in as many fields as necessary.
9. All test results are to be recorded and submitted to the Owner.

3.06 FIRE STOPPING

A. Comply with Section 27 0300.

B. Comply with requirements in Section 078413 "Penetration Firestopping."

C. Comply with TIA-569-B, Annex A, "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

E. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by Article 300-21 of the National Electric Code.

F. Use sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM E 119, and NFPA 251 and the hose stream test in accordance with UL 1OB.

3.07 GROUNDING AND BONDING COMPONENTS

A. Comply with TIA-607.

B. Comply with Section 27 0526.

C. Grounding shall be installed according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

D. Locate grounding bus bar to minimize length of bonding conductors.

E. Grounding bus bar shall be connected to a suitable electrical building ground with a minimum of a No. 4 AWG grounding electrode conductor.

F. Metallic equipment shall be grounded to the grounding bus bar with a minimum of No. 6 AWG equipment grounding conductor.

3.08 IDENTIFICATION

A. Use identification nameplate to identify cross-connection equipment, equipment racks, and cabinets.
   1. Unless otherwise noted, use a permanent adhesive label stock, covered with a permanent water-resistant sealer.

B. Comply with TIA/EIA-606-A for identification of system components, wiring, and cabling.

C. Comply with requirements in Section 26 0553 "Identification for Electrical Systems."

D. Comply with requirements in Section 09 9123 "Interior Painting" for painting backboards.
   1. For fire-resistant plywood, do not paint over manufacturer's label.

E. Paint and label colors for equipment identification shall comply with TIA/EIA-606-A for Class 2 level of administration including optional identification requirements of this standard.

F. Labels shall be preprinted or computer-printed type. Hand written labels are unacceptable.

SECTION 271500 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 GENERAL

1.01 SUMMARY

A. This section covers the basic materials and installation methods for horizontal cabling.

B. Section includes:
   1. UTP cable and cable connection hardware.
   2. Cabling identification products.

C. Examine the contract documents in their entirety (including drawings and specification sections in the other divisions) for requirements or work which may affect work under this section, regardless of whether such requirements or work are specifically indicated in this section.

D. Related Sections
   1. Section 260526 - Grounding and Bonding for Electrical Systems.
   2. Section 270500 - Common Work Results for Communications.
   3. Section 270526 - Grounding and Bonding for Communications Systems.
   4. Section 271100 - Communications Equipment Room Fittings.
   5. Section 271300 - COMMUNICATIONS BACKBONE CABLING.

1.02 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. Cross–Connect: equipment used to terminate and tie together communications circuits.

C. EMI: Electromagnetic interference.

D. FDE: Fiber Distribution Enclosure.

E. IDC: Insulation displacement connector.

F. LAN: Local area network.

G. RCDD: Registered Communications Distribution Designer.

H. UTP: Unshielded twisted pair.

1.03 REFERENCES

A. Most recent editions and addenda of the following documents:

B. TIA/EIA-568 series, most recent revisions, addenda and systems bulletins. All applicable.

C. TIA-569-D Telecommunications Pathways and Spaces, most recent revision including all relevant addenda and systems bulletins

D. TIA-606-B Administration Standard for Telecommunications Infrastructure, most recent revision including all addenda and systems bulletins

E. TIA-607-C Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises, most recent revision including all addenda and systems bulletins

F. ANSI/TIA–862 Structured Cabling Infrastructure Standard for Intelligent Building Systems, most recent revision including all addenda and systems bulletins

G. ANSI/TIA–942 Telecommunications Infrastructure Standard for Data Centers, most recent revision including all addenda and systems bulletins

H. BICSI Telecommunications Distribution Methods Manual (TDMM), most recent edition

I. National Electric Codes (NEC) – all applicable

J. Local Codes and Standards – all applicable

K. UL 444 – Standard for Safety of Communications Cable

L. UL 1666 – Standard for Safety of Flame Propagation Height

M. Local Authority Having Jurisdiction (AHJ)

N. Anywhere cabling standards conflict with one another or with electrical or safety codes, Contractor shall defer to the NEC and any applicable local codes or ordinances, or default to the most stringent requirements listed by either.

O. Manufacturers' Recommendations - Install all cabling and termination devices per the manufacturers' recommended installation practices for the applications warranties.

P. Any violations of applicable standards or codes committed by the Contractor shall be remedied at the Contractor's expense.

1.04 HORIZONTAL CABLING

A. Horizontal Cabling shall consist of cabling, pathways, and terminal hardware interconnecting telecommunications equipment rooms, intermediate distribution frames (IDF's) with workstation outlets.
   1. Cabling to Outlets: Specified horizontal cabling, wired in star topology to distribution frame located at center hub of star; also referred to as "links".
   2. Intermediate Distribution Frames (IDF): Support structures for terminating horizontal cables that extend to telecommunications outlets.
      a. Locate intermediate distribution frames as indicated on the drawings.

1.05 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. See Section 016000 - Product Requirements, for submittal requirements of factory fabricated items.

C. Product Data: Provide manufacturer's standard catalog pages and data sheets for each product.

D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and operation of product.

E. Informational Submittals
   1. Qualification Data for layout technician, installation supervisor, and field inspector.
   2. Source quality-control reports.
   3. Field quality-control reports.
   4. Maintenance Data: For splices and connectors to include in maintenance manuals.

F. Maintenance Material Submittals
   1. Furnish extra materials that match products installed. Products are to be packaged with protective covering for storage and identified with labels describing contents.
      a. Device Plates: One (1) of each type.

G. Project Record Documents: Prepared and approved by BICSI Registered Communications Distribution Designer (RCDD).
   1. Record actual locations of distribution frames.
   2. Show as-installed color coding, pair assignment, polarization, and cross-connect layout.
   3. Identify distribution frames and equipment rooms by room number on drawings.

H. Field Test Reports.

1.06 QUALITY ASSURANCE

A. Maintain at the project site a copy of each referenced document that prescribes execution requirements.

B. Manufacturer Qualifications: At least 3 years experience manufacturing products of the type specified.

C. Installer Qualifications: A company having at least 3 years experience in the installation and testing of the type of system specified, and:
   1. Employing a BICSI Registered Communications Distribution Designer (RCDD).
   2. Supervisors and installers factory certified by manufacturers of products to be installed.

3. Employing BICSI Registered Cabling Installation Technicians (RCIT) for supervision of all work.

D. Testing Agency Qualifications: An NRTL.
   1. Testing Agency's Field Supervisor: Currently certified by BICSI as an RCDD to supervise on-site testing.

E. Products: Listed, classified, and labeled as suitable for the purpose intended.

F. Product Listing Organization Qualifications: An organization recognized by OSHA as a Nationally Recognized Testing Laboratory (NRTL) and acceptable to authorities having jurisdiction.

G. All work shall combine with National Electrical Code and all applicable local codes.

H. All equipment and accessories shall be the product of manufacturers regularly engaged in their manufacture. All items of a given type shall be the products of the same manufacturer.

I. Furnish all materials, equipment and accessories new and free from defects.

J. All electrical equipment shall be listed by Underwriters' Laboratories, Inc. (UL) or bear UL labels.

K. Telecommunications pathways and spaces shall comply with TIA-569-D.

L. Grounding shall comply with TIA-607-C.

M. Supply all equipment and accessories in complete compliance with and in accordance with the applicable standards listed in reference standards of this Section and with all applicable national, state and local codes.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Acceptance Requirements: Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and Handling Requirements:
   1. Store and handle materials in accordance with manufacturer’s instructions.
   2. Keep materials in manufacturer’s original, unopened containers and packaging until installation.
   3. Store materials in clean, dry area indoors.
   4. Protect materials during storage, handling, and installation to prevent damage.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until:
   1. Spaces are dry and wet work is complete.
   2. HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.09 COORDINATION

A. Arrange for distribution spaces, space for equipment, chases, slots, and openings in building structure during progress of construction, to allow for telecommunications installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for telecommunication items requiring access that are concealed behind finished surfaces.

D. Coordinate layout and installation of telecommunications pathways and cabling with owner's telecommunications and LAN equipment and service suppliers.

E. The Communications Drawings indicate the work for the communications systems. The Architectural, Structural, and Mechanical Drawings contain certain information and details pertinent to the communications work. The telecommunications contractor should become familiar with all drawings and requirements pertinent to the work.

F. Drawings are diagrammatic and should not be used to obtain dimensional requirements by scaling the drawings.

G. Coordinate selection and application of sleeves with firestopping as specificed in Section 078400 - Firestopping.

1.10 WARRANTY

A. The horizontal communications cabling system installed shall be eligible for coverage by a 25 Year Warranty to the end user.
   1. Horizontal channels shall be completed with the specified connectivity products, including factory manufactured patch cords, for each System listed in Part 2 Products below in order to qualify for the 25 Year Warranty.

B. Certified Installer/Certified Integrator shall provide labor, materials, and documentation in accordance with the specified cable manufacturer's requirements to ensure that the Owner will be furnished with a 25 Year Warranty.

C. The installed structured cabling system shall provide a warranty guaranteeing installed channel performance above the TIA/EIA-568 requirements for Category 6 cabling systems.
   1. Standards-compliant channel or permanent link performance tests shall be performed in the field with an approved certification tester in the permanent link test configuration.

D. Necessary documentation for warranty registration shall be provided to the manufacturer by the installer (within 10 days) following 100 percent testing of cables.
   1. Submit test results to the manufacturer, in the certification tester’s original software files.
      a. Installer shall ensure that the warranty registration is properly submitted, with all required documentation within 10 days of project completion.
      b. Certified Contractor/Certified Integrator must adhere to the terms and conditions of the respective manufacturer’s warranty programs.

E. Installer shall ensure that the Owner receives the manufacturer issued project warranty certificate within 60 calendar days of warranty registration.

PART 2 PRODUCTS

2.01 UTP COPPER SYSTEMS DESCRIPTION

A. Horizontal twisted-pair category rated cabling systems are TIA/EIA-568 standards compliant intra-building twisted-pair communications cabling channels connecting Telecommunication Rooms (TRs) to Telecommunication Outlets (TOs) located at individual work areas.

B. Each system consists of a matched set of components installed according to industry guidelines that yield a defined and guaranteed systems performance level.

C. Each Horizontal twisted pair category rated cabling system includes the following components matched to the desired system performance.
   1. Category rated horizontal cable
   2. Category rated connector modules
   3. Category rated patch panels
   4. Category rated patch cords
   5. Necessary support systems, such as cable managers and faceplates

2.02 PATHWAYS

A. Pathways for communications cabling shall comply with TIA-569-D.

B. Conduit: As specified in Section 260533.13; provide pull cords in all conduit.

C. Boxes: As specified in Section 260533.16.
   1. Outlet boxes shall be no smaller than 2 inch wide, 3 inch high, and 2-1/2 inch deep.

D. Cable Trays: As specified in Section 270536.

E. Firestop Sleeves: Listed; provide as required to preserve fire resistance rating of building elements.
   1. Product(s):

a. Refer to parts list on T series drawings.

2.03 UTP COPPER CABLE AND TERMINATIONS

A. Manufacturers:
   1. Refer to parts list on T series drawings.

B. Copper Horizontal Cable:
   1. Description: 100 ohm, balanced twisted pair cable complying with TIA-568.2 and listed and labeled as complying with UL 444.
   2. Cable Type - Voice and Data: TIA-568.2 Category 6A UTP (unshielded twisted pair); 23 AWG.
   3. Cable Capacity: 4-pair.
   4. Cable Applications: Use listed NFPA 70 Type CMP plenum cable unless otherwise indicated.
   5. Cable Jacket Color - Voice and Data Cable: Blue.
   6. Product(s):
      a. Refer to parts list on T series drawings.

C. Copper Cable Terminations: Insulation displacement connection (IDC) type using appropriate tool; use screw connections only where specifically indicated.

D. Patch Panels for Copper Cabling: Sized to fit EIA/ECA-310 standard 19 inch wide equipment racks; cabling terminated on Type 110 insulation displacement connectors; printed circuit board interface.
   1. Jacks: Non-keyed RJ-45, suitable for and complying with same standard as cable to be terminated; maximum 48 ports per standard width panel.
   2. Labels: Factory installed laminated plastic nameplates above each port, numbered consecutively; comply with TIA-606.
   3. Provide incoming cable strain relief and routing guides on back of panel.

E. Jacks and Connectors: Modular RJ-45, non-keyed, terminated with 110-style insulation displacement connectors (IDC); high impact thermoplastic housing; suitable for and complying with same standard as specified horizontal cable; UL 1863 listed.
   1. Performance: 500 mating cycles.
   2. Voice and Data Jacks: 8-position modular jack, color-coded for both T568A and T568B wiring configurations.
   3. Product(s):
      a. Refer to parts list on T series drawings.

F. Copper Patch Cords:
   1. Description: Factory-fabricated 4-pair cable assemblies with 8-position modular connectors terminated at each end.
   2. Length: As indicated on drawings.
   3. Product(s):
      a. Refer to parts list on T series drawings.

2.04 COMMUNICATIONS OUTLETS

A. Manufacturers:
   1. Refer to parts list on T series drawings.

B. Outlet Boxes: Comply with Section 260533.16.
   1. Provide depth as required to accommodate cable manufacturer's recommended minimum conductor bend radius.

C. Wall Plates - Voice/Data Outlets
   1. Comply with system design standards and UL 514C.
   2. Accepts modular jacks/inserts.
   3. The wallplate housing shall be a one-piece, Single-gang flush mount style that fits standard NEMA openings.

4. Wallplate shall be made of high-impact, fire-retardant plastic rated UL 94V-0, and be cULus Listed (UL 1863 & CAN/CSA-C22.2 No. 182.4) and meet TIA/EIA-568 specifications.
5. Colors and configurations to be specified per schedule on plan.
6. Wallplate screws must match wallplate color.
7. The flush-mounted wallplate shall have the option of being mounted on adapter boxes for surface mount installation.
8. Capacity:
   a. Data or Combination Voice/Data Outlets: 1, 2, 3, 4, or 6 ports.
9. Wall Plate Material/Finish - Flush-Mounted Outlets: Match wiring device and wall plate finishes specified on the drawings.
10. Product(s):
    a. Refer to parts list on T series drawings.

D. Wall Plates - Wall Phone Outlets
1. Comply with system design standards and UL 514C.
2. Accepts modular jacks/inserts.
3. The wallplate housing shall be a one-piece, Single-gang flush mount style that fits standard NEMA openings.
4. Wallplate must be manufactured from 304 stainless steel in a brushed finish to provide corrosion resistance in a non-magnetic material and be cULus Listed (UL 1863 & CAN/CSA-C22.2 No. 182.4) and meet TIA/EIA-568 specifications.
5. Colors and configurations to be specified per schedule on plan.
6. Wallplate screws must match wallplate color.
7. Capacity:
   a. Data or Combination Voice/Data Outlets: 1, 2, 3, 4, or 6 ports.
8. Wall Plate Material/Finish - Flush-Mounted Outlets: Match wiring device and wall plate finishes specified on the drawings.
9. Product(s):
   a. Refer to parts list on T series drawings.

2.05 GROUNDING AND BONDING COMPONENTS

A. Comply with TIA-607.

B. Comply with Section 260526.

2.06 LABELING

A. Comply with TIA-606.

B. Comply with UL 969.

PART 3 EXECUTION

3.01 GENERAL

A. Comply with latest editions and addenda of TIA-568 (SET) (cabling), TIA-569 (pathways), TIA-607 (grounding and bonding), NECA/BICSI 568, NFPA 70, and SYSTEM DESIGN as specified in PART 2.

B. Grounding and Bonding: Perform in accordance with TIA-607 and NFPA 70.

C. Install firestopping to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 078400.

D. Follow manufacturers' instructions for installing all telecommunications cabling. Where instructions are unavailable, follow approved industry practice.

E. Compare communications drawings and specifications with the drawings and specifications of other trades, report any discrepancies to the Consultant; and obtain written instructions for changes necessary in the work. Include most stringent requirements in bid.

F. Repairs or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as

required.

G. Provide any screws, anchors, clamps, tie wraps, distribution rings, miscellaneous grounding and support hardware, etc. needed to facilitate the installation of the cable plant system. No self-tapping screws shall be used.

H. Furnish any special installation equipment or tools required to properly complete the installation.

I. All wiring, materials, and equipment must be listed and labeled by an NRTL. To certify that performance characteristics, meet ANSI/TIA 568 Standards, provide all Original Equipment Manufacturer (OEM) documentation to the Owner.

J. All techniques and fixtures used in the installation must minimize complexity must allow for easy maintenance of, and ready access to, all components for test measurements.

K. Provide protection for exposed cables where subject to damage.

L. Provide bushings on all conduit ends.

M. Abrasion Protection:
   1. Provide abrasion protection for cable or wire bundles which pass through holes or across edges of sheet metal.
   2. Use protective bushings to protect cables.

N. Where possible, route cables in overhead cable trays and inside wire management systems attached to equipment cabinets and racks.
   1. Use hook and loop cable wraps or ducts to restrain cabling installed outside of wire management systems on racks or in cabinets.
   2. Cable Raceways: Do not fill greater than ANSI/TIA-569-E maximum fill for particular raceway type.

O. Support horizontal cables at a maximum of 48-inch irregular intervals, if J-hook or trapeze system is used to support cable bundles.

P. Do not allow cables to rest on acoustic ceiling grids, plumbing pipes, or electrical conduits.

Q. Fire-Sprinkler System:
   1. Install cables above fire-sprinkler system.
   2. Do not attach cables to fire-sprinkler system or ancillary equipment or hardware.
   3. Install cable system and support hardware so that it does not obscure valves, fire alarm conduit, boxes, or other control devices.

R. Do not attach cables to ceiling grid or lighting fixture wires.

S. Replace before final acceptance, cables damaged or exceeding recommended installation parameters during installation.

T. All of the pathways shown on the drawings are suggested routes for the Contractor to use as guidelines. Prior to construction, the Contractor shall coordinate in the field with other trades to determine the exact feeder, tie, and riser backbone cabling pathways. In any case where the communication pathway must be removed and re-routed, due to conflicts with other trades with which the Contractor did not previously coordinate, the Contractor is responsible for all costs associated with the removal and relocation.

U. Wiring method: conceal conductors and cables in accessible ceilings, walls, and floors where possible.

V. Clean up all debris generated by installation activities and discard as directed by the Construction Manager.

W. Maintain a current copy of this Specification and related Drawings at the job site at all times.

3.02 INSTALLATION - TWISTED-PAIR COPPER CABLES

A. Install twisted-pair copper cables in accordance with manufacturer’s instructions.

B. Install cables in continuous lengths from origin to destination, without splices, except for transition points or consolidation points.

C. Cable Minimum Bend Radius and Maximum Pulling Tension:
   1. Do not exceed bend radius for UTP and Shielded cable: 4 X Cable OD
   2. Install cables so that there are no bends smaller than 4X cable OD at any point in the run and at the termination field.
   3. Pulling Tension: Do not exceed 25 ft.lb.

D. Separation from Power Lines: Provide following minimum separation distances between pathways for copper communications cables and power wiring of 480 volts or less:
   1. Open or Nonmetal Communications Pathways:
      a. Electric motors, fluorescent light fixtures, and unshielded power lines carrying up to 3 kVA: 12 inches.
      b. Electrical equipment and unshielded power lines carrying more than 5 kVA: 36 inches.
      c. Large electrical motors or transformers: 48 inches.
   2. Grounded Metal Conduit Communications Pathways:
      a. Electrical equipment and unshielded power lines carrying up to 2 kVA: 2-1/2 inches.
      b. Electrical equipment and unshielded power lines carrying from 2 kVA to 5 kVA: 6 inches.
      c. Electrical equipment and unshielded power lines carrying more than 5 kVA: 12 inches.
      d. Power lines enclosed in grounded metal conduit (or equivalent shielding) carrying from 2 kVA to 5 kVA: 3 inches.
      e. Power lines enclosed in grounded metal conduit (or equivalent shielding) carrying more than 5 kVA: 6 inches.

E. Coil cables to house cable coil without exceeding manufacturer’s bend radius.
   1. In hollow wall installations where box eliminators are used, store excess wire in wall.
   2. Store no more than 12 inches of cable slack.
   3. Loosely coil excess slack and store in ceiling above each drop location, when there is not enough space present in outlet box to store slack cables.

F. Dress and terminate cables in accordance with TIA/EIA-568, BICSI TDMM, and manufacturer's instructions.

G. Terminate 4-pair cables on jack and patch panels using T568-B wiring scheme.

H. Pair Untwist at Termination: Do not exceed 12 mm (1/2 inch).

I. Neatly bundle cables and dress to their respective panels or blocks.

J. Feed each panel or block by individual bundle separated and dressed back to point of cable entrance into rack or frame.

3.03 CABLE BUNDLING MATERIALS

A. Secure all cable bundles with proper bundling or securing materials so as to ensure that the cable runs are securely held in place both vertically and horizontally.

B. Bundle horizontal distribution cables in groups of no more than amount of cables designed for by cable support manufacturer, based on cable OD and weight.

C. Cable Ties and Other Cable Management Clamps:
   1. No more than hand tightened.
   2. Fit snugly, but not compress, crimp, or otherwise change physical characteristics of cable jacket or distort placement of twisted-pair components.
   3. Replace cables exhibiting stresses due to over tightening of cable management devices.
   4. Use hook and loop cable wraps for all cable bundles.

D. Do not use cable ties or hook-and-loop tape to secure cable runs to other building systems such as electrical conduit, Electric Metallic Tube (EMT), sprinkler pipes, ceiling suspension members.

E. In environmental air-handling spaces, only use appropriately-listed materials.

3.04 FIELD QUALITY CONTROL

A. Cables and Termination Hardware: Test 100 percent for defects in installation and verify cabling system performance under installed conditions in accordance with TIA/EIA-568.
   1. Verify all pairs of each installed cable before system acceptance.
   2. Defects in cabling system installation, including but not limited to cables, connectors, patch panels, and connector blocks shall be repaired or replaced to ensure 100 percent useable conductors in all cables installed.

B. Test all cables in accordance with this specification section, TIA-568.2 and TIA-568.3 standards, and manufacturer instructions.
   1. If any of these are in conflict, bring discrepancies to the attention of the Architect for clarification and resolution.

C. Cables, Jacks, Connecting Blocks, and Patch Panels:
   1. Verify all pairs of each installed cable before system acceptance.
   2. Defects in cabling system installation, including but not limited to cables, connectors, patch panels, and connector blocks shall be repaired or replaced to ensure 100 percent useable conductors in all cables installed.

D. Testing Twisted-Pair Copper Cables: Perform Permanent Link Testing (Unless patch cords that will remain installed at the work area and cross-connect are also being tested, in which case Channel Test results would be expected and accepted).
   1. Test twisted-pair copper cable links for continuity, pair reversals, shorts, opens, and performance as specified.
      a. Additional testing is required to verify Category performance.
      b. Test horizontal cabling using approved certification tester for Category 6A, Category 6, and Category 5e performance compliance in accordance with TIA-568.2.
   2. Basic Tests Required:
      a. Wire map.
      b. Length (feet).
      c. Insertion loss (dB), formerly attenuation.
      d. NEXT (Near end crosstalk) (dB).
      e. Return loss (dB).
      f. ELFEXT (dB).
      g. Propagation delay (ns).
      h. Delay skew (ns).
      i. PSNEXT (Power sum near-end crosstalk loss) (dB).
      j. PSELFEXT (Power sum equal level far-end crosstalk loss) (dB).
   3. Test Category 6 to 250 MHz.
   4. Provide test results in approved certification testers original software format, with the following minimum information per cable:
      a. Circuit ID.
      b. Information from specified basic tests required.
      c. Test Result: “PASS” or “FAIL”.
      d. Date and time of test.
      e. Project name.
      f. NVP.
      g. Software version.
   5. Report in writing to the Owner immediately, along with copy of test results, failed test results that cannot be remedied through re-termination (as in the case of reversed or split pairs).

3.05 FIRE STOPPING

A. Comply with Section 27 0300.

B. Comply with requirements in Section 078413 "Penetration Firestopping."

C. Comply with TIA-569-B, Annex A, "Firestopping."

D. Comply with BICSI TDMM, "Firestopping Systems" Article.

E. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by Article 300-21 of the National Electric Code.

F. Use sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM E 119, and NFPA 251 and the hose stream test in accordance with UL 1OB.

3.06 IDENTIFICATION

A. Use identification nameplate to identify cross-connection equipment, equipment racks, and cabinets.
   1. Unless otherwise noted, use a permanent adhesive label stock, covered with a permanent water-resistant sealer.

B. Comply with TIA-606-B for identification of system components, wiring, and cabling.

C. Comply with requirements in Section 26 0553 "Identification for Electrical Systems."

D. Comply with requirements in Section 09 9123 "Interior Painting" for painting backboards.
   1. For fire-resistant plywood, do not paint over manufacturer's label.

E. Paint and label colors for equipment identification shall comply with TIA-606-B for Class 2 level of administration including optional identification requirements of this standard.

F. Labels shall be preprinted or computer-printed type. Hand written labels are unacceptable.

END OF SECTION

SECTION 284600
FIRE DETECTION AND ALARM

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Fire alarm system design and installation, including all components, wiring, and conduit.

B. Transmitters for communication with supervising station.

C. Circuits from protected premises to supervising station, including conduit.

D. Replacement and removal of existing fire alarm system components, wiring, and conduit indicated.

E. Maintenance of fire alarm system under contract for specified warranty period.

1.02 RELATED REQUIREMENTS

A. Section 078400 - Firestopping: Materials and methods for work to be performed by this installer.

B. Section 078700 - Smoke Containment Barriers: Smoke and fire curtains to be released by fire alarm system or smoke detectors.

C. Section 083323 - Overhead Coiling Doors: Coiling fire doors to be released by fire alarm system.

D. Section 087100 - Door Hardware: Electrically operated locks and door holder devices to be monitored and released by fire alarm system.

E. Section _____: Communications receivers and other supervising station components.

F. Section 211300 - Fire-Suppression Sprinkler Systems: Supervisory, alarm, and actuating devices installed in sprinkler system.

G. Section 212200 - Clean-Agent Fire-Extinguishing System: Supervisory, alarm, and releasing devices installed in extinguishing system.

H. Section 233300 - Air Duct Accessories: Smoke dampers and combination fire/smoke dampers monitored and controlled by fire alarm system.

I. Section 260548 - Vibration and Seismic Controls for Electrical Systems: Requirements for the seismic qualification of equipment specified in this section.

J. Section 275129.13 - Rescue Assistance Signal Systems: Two-way emergency communication systems for areas of refuge/rescue assistance.

1.03 REFERENCE STANDARDS

A. 36 CFR 1191 - Americans with Disabilities Act (ADA) Accessibility Guidelines for Buildings and Facilities; Architectural Barriers Act (ABA) Accessibility Guidelines current edition.

B. ADA Standards - 2010 ADA Standards for Accessible Design 2010.

C. NFPA 13 - Standard for the Installation of Sprinkler Systems.

D. NFPA 14 - Standard for the Installation of Standpipe and Hose Systems.

E. NFPA 20 - Standard for the Installation of Stationary Pumps for Fire Protection.

F. NFPA 22 - Standard for Water Tanks for Private Fire Protection.

G. NFPA 70 - National Electrical Code.

H. NFPA 72 - National Fire Alarm and Signaling Code; Most Recent Edition.

I. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

J. NFPA 92 - Standard for Smoke Control Systems.

K. NFPA 110 - Standard for Emergency and Standby Power Systems.

L. NFPA 2001 - Standard on Clean Agent Fire Extinguishing Systems.

M. UL 228 - Standard for Door Closers-Holders, With or Without Integral Smoke Detectors.

N. UL 268 - Standard for Smoke Detectors for Fire Alarm Systems; Current Edition, Including All Revisions.

O. UL 268A - Standard for Smoke Detectors for Duct Application.

P. UL 346 - Standard for Waterflow Indicators for Fire Protective Signaling Systems.

Q. UL 864 - Standard for Control Units and Accessories for Fire Alarm Systems.

R. UL 1971 - Standard for Signaling Devices for the Hearing Impaired.

S. UL 1480 - Speakers for Fire Alarm and Signaling Systems, Including Accessories.

T. UL 1481 - Standard for Power Supplies for Fire-Protective Signaling Systems.

U. UL 2075 - Standard for Gas and Vapor Detectors.

V. UL 2196 - Standard for Fire Test for Circuit Integrity of Fire-Resistive Power, Instrumentation, Control, and Data Cables.

W. UL Product Category UUKL - Smoke Control System Equipment.

1.04 SUBMITTALS

A. See Section 013000 - Administrative Requirements, for submittal procedures.

B. General
1. Engineer shall review and recommend approval/disapproval or take other appropriate action on the Contractor's submittals including shop drawings, samples, documentation and record drawings. This review is to verify conformance to project specifications and design concepts expressed in the contract documents. This action shall be taken with all reasonable promptness as to cause to delay in the work, while allowing adequate time to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details (i.e. dimensions) or for substantiating installation or performance of equipment or systems designed by the Contractor, all of which remain in the Contractor's responsibility to the extent required by the contract documents. The Engineer's review shall not constitute approval of safety precautions of construction, means, methods, techniques, sequences of procedures, or approval of a specific assembly of which the item is a part.
2. If submittals, upon review by the Owner, are found not to conform to the requirements of these specifications, the Contractor shall be required to resubmit with modifications. The Contractor shall be responsible for the Owner's extra expenses for subsequent review(s) of rejected submittals necessitated by the Contractor's failure to make the requested modifications. Such extra fees shall be deducted from payments by the Owner to the Contractor. Approval of the submittals by the Owner shall, in no case, relieve the Contractor of his responsibility to meet the requirements of this specification.

C. Subcontractors
1. Contractor shall submit with his bid, a list of all proposed subcontractors. All proposed subcontractors are subject to the approval of the Owner. The installing subcontractor(s) shall:
a. Hold all licenses and permits necessary to perform this work.
b. Have at least five years of experience in the installation of systems of this type and be familiar with all applicable local, state and federal laws and regulations.
c. Regularly engaged in the servicing, installation, and testing of fire detection and alarm systems.

D. Equipment Lists
1. The Contractor shall submit with his bid a detailed equipment list, identifying types, models, and quantities of all materials, devices and equipment proposed. This submittal shall include manufacturers' data sheets showing the types and models of all equipment, devices, material and wire proposed. Evidence of ULI listings shall be submitted with the data sheets. The submittal shall include, but not be limited to the following:
a. Conduit, raceway, junction boxes, terminal cabinets, device backboxes, fittings, hangers, and mounting hardware.

b. Wire, cable, connectors, terminal strips, and electrical tape.
c. Fire alarm control equipment and annunciators, including all components, modules, and enclosures.
d. All components of voice evacuation and firefighters' communication equipment.
e. Graphic firefighter's smoke control panels, including all components.
f. Manual fire alarm stations, detectors, auxiliary function relays and solenoids, and notification appliances.
g. Uninterruptable power supplies and standby batteries.
h. Any other materials, devices, or equipment to be provided.
i. Fire alarm schematic riser diagram supplemented with narrative descriptions as necessary for clarity and completeness.

2. When a data sheet shows more than one product, the proposed product shall be clearly indicated by arrows or other suitable means.

E. Work Schedule
1. The Contractor shall submit with his bid a proposed work schedule and representative chart. This schedule shall indicate the time necessary for:
a. Project start-up.
b. Property survey (where applicable).
c. Shop drawing submittals.
d. Installation.
e. Contractor pre-testing.
f. Functional testing with Engineer.
g. Final acceptance tests with Authority Having Jurisdiction.
2. The proposed work schedule will be reviewed and finalized during the preconstruction meeting and will be updated during the project.

F. Samples
1. Within 30 days of authorization to proceed, the Contractor shall submit samples of all proposed alarm initiating devices and audio/visible notification devices, and equipment with back boxes to be installed at the fire alarm control panel to the Owner for approval.

G. Permits, Licenses, and Certificates
1. Prior to start of installation, the Contractor shall obtain and submit copies of all permits, licenses, certificated and approvals necessary to conduct this work.

H. Shop Drawings
1. Prior to installation, but within 30 days after awarding of the contract, the Contactor shall submit one full set of printed shop drawings, one set of electronic shop drawings (in PDF format), one electronic set of required data sheets, and installation manuals/instructions detailing the manufacturer's installation recommendations for all equipment to be installed, to the Owner for approval. Installation prior to receipt of approved shop drawings shall be at the risk of the Contractor.
2. The shop drawings shall consist of the following:
a. A drawing legend sheet identifying:
1) All symbols used on the drawings, by type of device or equipment, manufacturer, and manufacturer's part number. This information shall correspond to the manufacturer, and manufacturer's part number. This information shall correspond to the manufacturer's catalog data sheets required elsewhere in this section.
2) All conventions, abbreviations and specialized terminology used on the drawings, as necessary to understand and interpret the information contained therein.
3) All color codes and conduit, conductor/circuit and device numbering systems.
4) A complete drawing list/index identifying all drawings in the shop drawing package by title, drawing number and Specification cross-reference.
b. Clean architectural floor plans drawn to scale and a system riser diagram with a title block on each drawing. Floor plan drawings required for this submittal shall be

generated using backgrounds provided by the Owner in AutoCAD format.

1) The floor plan drawings shall indicate:
   (a) Location of all devices, equipment, risers and electrical power connections. Addressable systems shall indicate device addresses for all addressable components shown on each drawing.
   (b) Number, size, and type of conductors and conduit.
   (c) Point-to-point wiring connections showing individual circuits and circuit/conduit routing. This information shall be depicted in sufficient detail to readily locate specific conduits, raceways and circuits in the field and to identify the specific conductors/circuits contained therein.
   (d) Typical wiring diagrams for all alarm initiating devices and notification appliances, showing the size and type of conductors, wiring terminations and terminal identifications.
   (e) Conduit fill calculations, in chart form, indicating the cross-section area percent fill for each type of wire/cable in each size of conduit used in the system. Conduit fill shall be in accordance with NFPA 70.
2) The riser diagram shall indicate:
   (a) Number, size, and type of riser conduits/raceways.
   (b) Number, size, and type of conductors in each riser.
   (c) Number of each type of device on each circuit on each floor. Distinguish existing devices to remain, existing devices to be replace, and new devices.

c. Detailed wiring diagrams for all fire alarm control panels, voice evacuation panels, public address panels, firefighters' telephone panels control panel modules, power supplies, electrical power connections, auxiliary function relays and solenoids, remote signaling equipment, graphic firefighter's smoke control panels, and remote annunciators. Detailed wiring diagrams shall identify all required terminations, including terminal identifications. All unsupervised connections and terminations shall be noted "unsupervised."
   1) These diagrams shall depict and identify all circuit boards, modules, power supplies, standby batteries, wiring harnesses, terminal strips and connections thereto, including spare zones and circuits. Where multiple components of a similar type are provided, each shall be identified by a unique component number.
   2) These diagrams shall include front-view details of all control panels and annunciators, depicting and identifying all indicators, controls and zone labels, including proposed nomenclature.
   3) These diagrams shall depict the required information to relative scale, actual size or larger, showing proper spatial relationships between components, and shall reflect the corresponding system components as they are to be installed.
d. Standby battery capacity calculations. Battery calculations shall list the type of devices (UPS, detection, monitoring, and control), and modules; quantities, unit and extended amperage draw for quiescent and alarm conditions, total amperage draw and battery amp/hour rating. For design criteria, the calculated load shall be the design load, including spare capacity. In addition, the battery capacity used to meet the calculated load shall be a maximum of 80 percent of the amp-hour rating listed by the manufacturer.
   1) Amplifier capacity calculations showing sizing capable of powering all speakers (core areas and tenant spaces), simultaneously, while operating at no more than 67-percent of their rated capacity. Power supply capacity calculations showing that the power supplies are capable of powering all modules and devices shall be provided.
e. Voltage drop calculations shall list the actual percentage of drop for compliance with the manufacturer's requirements and provide sufficient capacity to increase loading of the circuit by 25%.
f. A complete zone/address list identifying each signal initiating zone, annunciator zone, notification signaling zone, paging zone, remote signaling and auxiliary function zone

and the specific devices associated with each zone.

g. An Input/Output Matrix defining the system operation. This matrix shall cross-reference each signal initiating zone to its corresponding annunciator zones, notification signaling zones, remote signaling zones, and auxiliary function zones, and indicate system operation in the event of each type of trouble condition recognized by the system.

3. Each drawing shall be cross-referenced to all related drawings and specific drawing details as necessary for the submittal as a whole to clearly depict the proposed installation. Each drawing shall show revision number and date indicated in the title block. Revisions shall be clouded or otherwise highlighted between submissions. Revisions made without clouding or other highlights will not be reviewed and any approval of the revised drawings will not apply to those unnoted revisions.
4. The Contractor will not be authorized to start installation until all of the shop drawings and data sheets are received, reviewed and approved in writing by the Engineer.

I. Evidence of Installer Qualifications
1. The Contractor shall be a manufacturer of fire alarm systems and devices, or be an authorized, factory trained, and certified representative of a manufacturer of fire alarm systems and devices.
2. The Contractor shall provide a job site supervisor who is a minimum NICET Level II Fire Alarm Systems technology subfield and factory trained and certified on the equipment being provided/installed and current software revisions. The job site supervisor shall be present on-site each day that work is actively in progress. This individual shall be the same person throughout the course of the project.
3. Prior to start of installation, the Contractor shall obtain and submit copies of all permits, licenses, certificated and approvals necessary to conduct this work.

J. Inspection and Test Reports:
1. Submit inspection and test plan prior to closeout demonstration.
2. Submit documentation of satisfactory inspections and tests.
3. Submit NFPA 72 Record of Completion filled out.

K. Operating and Maintenance Data: See Section 017800 for additional requirements; revise and resubmit until acceptable; have one set available during closeout demonstration:
1. Complete set of specified design documents, as approved by authority having jurisdiction.
2. One printed set of project record documents and closeout documents, bound or filed in same manuals.
3. Contact information for firm that will be providing contract maintenance and trouble call-back service.
4. List of recommended spare parts, tools, and instruments for testing.
5. Replacement parts list with current prices, and source of supply.
6. Detailed troubleshooting guide and large scale input/output matrix.
7. Preventive maintenance, inspection, and testing schedule complying with NFPA 72; provide printed copy and computer format acceptable to Owner.
8. Detailed but easy to read explanation of procedures to be taken by non-technical administrative personnel in the event of system trouble, when routine testing is being conducted, for fire drills, and when entering into contracts for remodeling.

L. Project Record Documents: See Section 017800 for additional requirements; have one set available during closeout demonstration:
1. Complete set of floor plans showing actual installed locations of components, conduit, and zones.
2. "As installed" wiring and schematic diagrams, with final terminal identifications.
3. "As programmed" operating sequences, including control events by device, updated input/output chart, and voice messages by event.

M. Closeout Documents:
1. Certification by manufacturer that the system has been installed in compliance with manufacturer's installation requirements, is complete, and is in satisfactory operating

condition.
2. NFPA 72 "Record of Completion", filled out completely and signed by installer and authorized representative of authority having jurisdiction.
3. Maintenance contract.

1.05 QUALITY ASSURANCE

A. Copies of Design Criteria Documents: Maintain at the project site for the duration of the project, bound together, an original copy of NFPA 72, the relevant portions of applicable codes, and instructions and guidelines of authorities having jurisdiction; deliver to Owner upon completion.

B. Designer Qualifications: NICET Level III or IV (3 or 4) certified fire alarm technician or registered fire protection engineer, employed by fire alarm control panel manufacturer, Contractor, or installer , with experience designing fire alarm systems in the jurisdictional area of the authorities having jurisdiction.

C. Installer Qualifications: Firm with minimum 3 years documented experience installing fire alarm systems of the specified type and providing contract maintenance service as a regular part of their business.
1. Authorized representative of control unit manufacturer; submit manufacturer's certification that installer is authorized; include name and title of manufacturer's representative making certification.
2. Installer Personnel: At least 2 years of experience installing fire alarm systems.
3. Supervisor: NICET level II or(2) certified fire alarm technician; furnish name and business address.
4. Contract maintenance office located within 50 miles of project site.
5. Certified in the State in which the Project is located as fire alarm installer.

D. Maintenance Contractor Qualifications: Same entity as installer or different entity with specified qualifications.

1.06 WARRANTY

A. See Section 017800 - Closeout Submittals, for additional warranty requirements.

B. Provide control panel manufacturer's warranty that system components other than wire and conduit are free from defects and will remain so for 1 year after date of Substantial Completion.

C. Provide installer's warranty that the installation is free from defects and will remain so for 1 year after date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Fire Alarm Control Units and Accessories - Acceptable Manufacturers:
1. EST;
2. Mircom;
3. Firecom;
4. Honeywell Security & Fire Solutions/Notifier ;
5. Siemens Building Technologies, Inc
6. SimplexGrinnell, a Johnson Controls Business

2.02 FIRE ALARM SYSTEM

A. Fire Alarm System: Provide a new automatic fire detection and alarm system:
1. Provide all components necessary, regardless of whether shown in Contract Documents or not.
2. Protected Premises: Entire building shown on drawings.
3. Comply with the following; where requirements conflict, order of precedence of requirements is as listed:
   a. ADA Standards.
   b. The requirements of the local authority having jurisdiction, which is _____.
   c. Applicable local codes.
   d. Contract Documents (drawings and specifications).

e. NFPA 72; where the word "should" is used consider that provision mandatory; where conflicts between requirements require deviation from NFPA 72, identify deviations clearly on design documents.

4. Evacuation Alarm: Allow for evacuation notification of any individual zone or combination of zones, in addition to general evacuation of entire premises.
5. Voice Notification: Provide emergency voice/alarm communications with multichannel capability; digital. A minimum of three separate channels shall be provided.
6. General Evacuation Zones: Each floor is considered a general evacuation zone unless otherwise indicated, with alarm notification in all zones on the same floor, on the floor above, and the floor below.
7. Staff Response Zones: For each smoke zone where occupants are not ambulatory, program notification zone as directed to notify staff in areas outside the normal notification zone and in other buildings, for response to assist in evacuation.
8. Program notification zones and voice messages as directed by Owner.
9. Hearing Impaired Occupants: Provide visible notification devices in all public areas.
10. Fire Command Center: Location indicated on drawings.
11. Fire Alarm Control Unit: New, located at fire command center.
12. Two-Way Telephone: Provide two-way telephone service for the use of the fire service and others; provide jacks and two portable handsets.
13. Combined Systems: Do not combine fire alarm system with other non-fire systems.

B. Supervising Stations and Fire Department Connections:
1. Remote Supervising Station: UL-listed central station under contract to facility.
2. Means of Transmission to Remote Supervising Station: Digital alarm communicator transmitter (DACT), 2 telephone lines.

C. Circuits:
1. Initiating Device Circuits (IDC): Class B.
2. Signaling Line Circuits (SLC) Within Single Building: Class B.
3. Notification Appliance Circuits (NAC): Class B.

D. Spare Capacity:
1. Initiating Device Circuits: Minimum 25 percent spare capacity.
2. Notification Appliance Circuits: Minimum 25 percent spare capacity.
3. Speaker Amplifiers: Minimum 50 percent spare capacity.
4. Fire Alarm Control Units: Capable of handling all circuits utilized to capacity without requiring additional components other than plug-in control modules.

E. Power Sources:
1. Primary: Dedicated branch circuits of the facility power distribution system.
2. Secondary: Storage batteries.
3. Capacity: Sufficient to operate entire system for period specified by NFPA 72.
4. Each Computer System: Provide uninterruptible power supply (UPS).

F. Seismic Qualification: Provide fire alarm system and associated components suitable for application under the seismic design criteria specified in Section 260548 where required. Include certification of compliance with submittals.

2.03 EXISTING COMPONENTS

A. Existing Fire Alarm System: Remove existing system completely after new system is fully operational and tested.

B. Existing Fire Alarm System: Remove existing components indicated and incorporate remaining components into new system, under warranty as if they were new; do not take existing portions of system out of service until new portions are fully operational, tested, and connected to existing system.

C. On-Premises Supervising Station: Include as part of this work all modifications necessary to existing supervising station to accommodate new fire alarm work.

D. Clearly label components that are "Not In Service."

E. Remove unused existing components and materials from site and dispose of properly.

2.04 FIRE SAFETY SYSTEMS INTERFACES

A. Supervision: Provide supervisory signals in accordance with NFPA 72 for the following:
1. Sprinkler water control valves.
2. Dry-pipe sprinkler system pressure.
3. Dry-pipe sprinkler valve room low temperature.
4. Sprinkler water storage tank low level.
5. Sprinkler water storage tank low temperature.
6. Fire pump(s).
7. Elevator shut-down control circuits.

B. Alarm: Provide alarm initiation in accordance with NFPA 72 for the following:
1. Sprinkler water flow.
2. Total flooding suppression system activation.
3. Kitchen hood suppression activation; also disconnect fuel source from cooking equipment.
4. Elevator lobby, elevator hoistway, and elevator machine room smoke detectors.
5. Generator room heat detector.
6. Duct smoke detectors.

C. Elevators:
1. Elevator lobby, hoistway, and machine room smoke detectors: Elevator recall for fire fighters' service.
2. Elevator Machine Room Heat Detector: Shut down elevator power prior to hoistway sprinkler activation.
3. Sprinkler pressure or waterflow: Shut down elevator power prior to hoistway sprinkler activation.

D. HVAC:
1. Duct Smoke Detectors: Close dampers indicated; shut down air handlers indicated.

E. Doors:
1. Smoke Barrier Door Magnetic Holders: Release upon activation of smoke detectors in smoke zone on either side of door, upon alarm from manual pull station on same floor, and upon sprinkler activation on same floor. Refer to Section 087100.
2. Electromagnetic Door Locks on Egress Doors: Unlock upon activation of any alarm initiating device or suppression system in smoke zone that doors serve as egress from. Refer to Section 087100.
3. Overhead Coiling Fire Doors: Release upon activation of smoke detectors in smoke zone on either side of door, upon alarm from manual pull station on same floor, and upon sprinkler activation on same floor. Refer to Section 083323.

2.05 COMPONENTS

A. General:
1. Provide flush mounted units where installed in finish areas; in unfinished areas, surface mounted unit are acceptable.
2. Provide legible, permanent labels for each control device, using identification used in operation and maintenance data.

B. Fire Alarm Control Units: Analog, addressable type; listed, classified, and labeled as suitable for the purpose intended.

PART 3 EXECUTION

3.01 INSTALLATION

A. Install in accordance with applicable codes, NFPA 72, NFPA 70, and Contract Documents.

B. Conceal all wiring, conduit, boxes, and supports where installed in finished areas.

C. Obtain Owner's approval of locations of devices, before installation.

D. Install instruction cards and labels.

3.02 INSPECTION AND TESTING FOR COMPLETION

A. Notify Owner 7 days prior to beginning completion inspections and tests.

B. Owner will provide the services of an independent fire alarm engineer or technician to observe all tests.

C. Notify authorities having jurisdiction and comply with their requirements for scheduling inspections and tests and for observation by their personnel.

D. Provide the services of the installer's supervisor or person with equivalent qualifications to supervise inspection and testing, correction, and adjustments.

E. Prepare for testing by ensuring that all work is complete and correct; perform preliminary tests as required.

F. Provide all tools, software, and supplies required to accomplish inspection and testing.

G. Perform inspection and testing in accordance with NFPA 72 and requirements of local authorities; document each inspection and test.

H. Correct defective work, adjust for proper operation, and retest until entire system complies with Contract Documents.

I. Diagnostic Period: After successful completion of inspections and tests, Operate system in normal mode for at least 14 days without any system or equipment malfunctions.
   1. Record all system operations and malfunctions.
   2. If a malfunction occurs, start diagnostic period over after correction of malfunction.
   3. Owner will provide attendant operator personnel during diagnostic period; schedule training to allow Owner personnel to perform normal duties.
   4. At end of successful diagnostic period, fill out and submit NFPA 72 "Inspection and Testing Form."

3.03 OWNER PERSONNEL INSTRUCTION

A. Provide the following instruction to designated Owner personnel:
   1. Hands-On Instruction: On-site, using operational system.
   2. Classroom Instruction: Owner furnished classroom, on-site or at other local facility.
   3. Factory Instruction: At control unit manufacturer's training facility.

B. Administrative: One-hour session(s) covering issues necessary for non-technical administrative staff; classroom:
   1. Initial Training: 1 session pre-closeout.
   2. Refresher Training: 1 session post-occupancy.

C. Basic Operation: One-hour sessions for attendant personnel, security officers, and engineering staff; combination of classroom and hands-on:
   1. Initial Training: 1 session pre-closeout.
   2. Refresher Training: 1 session post-occupancy.

D. Detailed Operation: Two-hour sessions for engineering staff; assume NICET level I qualifications or equivalent; combination of classroom and hands-on:
   1. Initial Training: 1 session pre-closeout.
   2. Refresher Training: 1 session post-occupancy.

E. Maintenance Technicians: Detailed training for electrical technicians, on programming, maintaining, repairing, and modifying; factory training:
   1. Initial Training: One 3-day session, pre-closeout.
   2. Refresher Training: One 1-day session post-occupancy.

F. Furnish the services of instructors and teaching aids; have copies of operation and maintenance data available during instruction.

G. Provide means of evaluation of trainees suitable to type of training given; report results to Owner.

3.04 CLOSEOUT

A. Closeout Demonstration: Demonstrate proper operation of all functions to Owner.
   1. Be prepared to conduct any of the required tests.
   2. Have at least one copy of operation and maintenance data, preliminary copy of project record drawings, input/output matrix, and operator instruction chart(s) available during demonstration.
   3. Have authorized technical representative of control unit manufacturer present during demonstration.
   4. Demonstration may be combined with inspection and testing required by authority having jurisdiction; notify authority having jurisdiction in time to schedule demonstration.
   5. Repeat demonstration until successful.

B. Occupancy of the project will not occur prior to Substantial Completion.

C. Substantial Completion of the project cannot be achieved until inspection and testing is successful and:
   1. Specified diagnostic period without malfunction has been completed.
   2. Approved operating and maintenance data has been delivered.
   3. Spare parts, extra materials, and tools have been delivered.
   4. All aspects of operation have been demonstrated to Owner.
   5. Final acceptance of the fire alarm system has been given by authorities having jurisdiction.
   6. Occupancy permit has been granted.
   7. Specified pre-closeout instruction is complete.

D. Perform post-occupancy instruction within 3 months after Substantial Completion.

3.05 MAINTENANCE

A. See Section 017000 - Execution and Closeout Requirements, for additional requirements relating to maintenance service.

B. Provide to Owner, at no extra cost, a written maintenance contract for entire manufacturer's warranty period, to include the work described below.

C. Provide to Owner, a proposal as an alternate to the base bid, for a maintenance contract for entire warranty period, to include the work described below; include the total cost of contract, proposal to be valid at least until 30 days after date of Substantial Completion.

D. Perform routine inspection, testing, and preventive maintenance required by NFPA 72, including:
   1. Maintenance of fire safety interface and supervisory devices connected to fire alarm system.
   2. Repairs required, unless due to improper use, accidents, or negligence beyond the control of the maintenance contractor.
   3. Record keeping required by NFPA 72 and authorities having jurisdiction.

E. Provide trouble call-back service upon notification by Owner:
   1. Provide on-site response within 2 hours of notification.
   2. Include allowance for call-back service during normal working hours at no extra cost to Owner.
   3. Owner will pay for call-back service outside of normal working hours on an hourly basis, based on actual time spent at site and not including travel time; include hourly rate and definition of normal working hours in maintenance contract.

F. Provide a complete description of preventive maintenance, systematic examination, adjustment, cleaning, inspection, and testing, with a detailed schedule.

G. Maintain a log at each fire alarm control unit, listing the date and time of each inspection and call-back visit, the condition of the system, nature of the trouble, correction performed, and parts replaced. Submit duplicate of each log entry to Owner's representative upon completion of site visit.

H. Comply with Owner's requirements for access to facility and security.

Description: **Amplifier, Power, Stereo**

Manufacturer: Black Diamond Video ((877) 549-6600)

Vendor: Black Diamond Video ((877) 549-6600)

Model: Samson SERVO 120A

Alt ID: AMF-SRO

Mfr #: BDV-AMP

Vendor #: BDV-AMP

Single rack-space stereo power amplifier. delivers 60 watts of power per channel into 4 Ohms (or, in Bridge mode, 120 watts into 8-Ohms) over the full frequency spectrum, from 3 Hz to 65 kHz. Both balanced 1/4? TRS and unbalanced RCA-type input connectors are provided, along with 5-way binding post output connectors.

DESCRIPTION
POWER AMPLIFIER

SERIES
SERVO

CATEGORY
AMPLIFIERS

GENERAL DESCRIPTION

The Servo 120a is a single rack-space stereo power amplifier which is optimized for use in both professional and project recording studio environments as well as for live performance. It delivers 60 watts of power per channel into 4 Ohms (or, in Bridge mode, 120 watts into 8-Ohms) over the full frequency spectrum, from 3 Hz to 65 kHz. Both balanced 1/4″ TRS and unbalanced RCA-type input connectors are provided, along with 5-way binding post output connectors. Front-panel controls and displays include a power switch, independent left- and right-channel input level controls, ten-segment LED meters, a Protection LED, and a convenient headphone jack and speaker on/off switch for private cue monitoring. Suggested applications for the Servo 120a include:

- Amplification for nearfield monitors or cue headphones in both professional and project studios - Its superb audio specs and whisper-quiet performance (its convection cooling design means there is no fan), along with its unique front-panel speaker on-off switch and dedicated headphone jack, make the Servo 120a the perfect complement to any recording studio.
- Home Theatre applications - The power and flexibility offered by the Servo 120a (it can be used either as a 60 watt stereo amplifier, or, in bridge mode, as a 120 watt monophonic amp) makes it the perfect addition to any home theatre, in conjunction with any DVD player or other surround sound system. For example, use it in stereo mode to drive your main front left/right speakers, using your home stereo to drive the rear satellite speakers—or use the Servo 120a in Bridge mode to drive your center channel or subwoofer with power galore.
- As an extension to a home hi-fi system - The Servo 120a boasts professional specs which far exceed that of most consumer products. For a real “studio” experience in your own home, try connecting your home hi-fi amplifier’s auxiliary outputs to the Servo 120a’s inputs (thus using your hi-fi amp as a preamplifier) and then connect your existing speakers to the Servo 120a’s outputs. If you fall in love with the sound (as we’re sure you will), you might want to substitute a professional pre-amplifier for your existing hi-fi amp—and, from there, you may well end up graduating to higher-level speakers. High quality sound is addicting—don’t say we didn’t warn you!
- Powering public address systems in permanent installations - The Servo 120a can be used to effectively drive PA speakers in installations such as classrooms and corporate conference rooms.
- Onstage monitoring - In small and medium-sized onstage areas (such as in clubs, lounges, etc.), the Servo 120a can be used to drive stage monitors, allowing the performers to hear themselves without having to rely on onstage equipment amplification.
- MIDI rack monitoring - Taking only a single rack space, MIDI musicians can easily incorporate the Servo 120a into their existing rack of gear. Combined with a pair of high quality stage or studio speakers, this makes for an excellent monitoring system that can accurately reproduce the broad range of frequencies typically output by devices such as synthesizers, samplers, and digital audio workstations.

DESCRIPTION
POWER AMPLIFIER

CATEGORY
AMPLIFIERS

SERVO 120A

FEATURES

> Power to spare - Each channel delivers 60 watts of power into 4 Ohms (or, in Bridge mode, 120 watts into 8 Ohms).

> Clean, crisp sound - Impressive audio specifications such as .01% THD, S/N of 105 dB, crosstalk of 75 dB, and frequency response of 3 Hz to 65 kHz guarantee ultra-clean sound quality in any live or recording environment.

> Independent input level controls for each channel with 41-position detents.

> Ten-segment LED meters for each channel continuously display power output levels and allow you to correct for overloading (clipping) conditions.

> Front-panel Protection LED shows you at a glance overheating or faulty wiring conditions.

> Innovative front-panel Speaker on/off switch and dedicated headphone jack enables private cue monitoring of the input signal.

> Both electronically balanced 1/4″ TRS and unbalanced RCA-type input connector jacks are provided along with 5-way binding post output connectors.

> Convection cooling (no fan) makes for whisper-quiet operation even in critical listening environments such as recording studios.

> Unique bipolar circuit design that continuously keeps DC output during idling at or near 0 volts (thus keeping idle speakers at their zero point). This serves to minimize heat overload problems by effectively preventing the Servo 120a from applying power when unnecessary.

> Protection relay circuitry (linked to the DC offset circuitry) that prevents “thumps” when powering on or off. This means that you can use the Servo 120a with a single power strip into which a mixer or other audio devices are connected, without danger of damage to connected speakers.

> Toroidal transformer power supply.

> Rugged construction (an all-steel chassis with a titanium finish and a lightweight anodized aluminum heat sink) makes the Servo 120a eminently roadworthy.

> Flexible design allows the Servo 120a to be used free-standing or, with the use of included rack ears, mounted in any standard 19″ rack (taking just a single rack space).

> Three-year warranty.

ARCHITECT’S & ENGINEER’S SPECIFICATIONS

The Samson Servo 120a shall be a single space rackmount stereo power amplifier. It shall deliver 60 watts per channel at 4 Ohms or 120 watts into 8 Ohms in bridge mono mode. It shall have 1/4″ balanced inputs and RCA unbalanced inputs. It shall be a bi-polar design and use a toroidal transformer. The front panel shall have volume controls and LED metering for each channel. The front panel shall also have a headphone output jack and an associated speaker mute switch. The rear panel shall also have binding posts for the amplifier outputs.

SERVO 120A SPECIFICATIONS

Rated Output Power, per channel (@ 1 kHz)
Stereo mode
4 Ohm, <0.05% THD+N ..... 60 W
4 Ohm, 1% THD+N ..... 80 W
8 Ohm, <0.05% THD+N ..... 50 W
8 Ohm, 1% THD+N ..... 55 W

Bridge mode
8 Ohm, <0.05% THD+N ..... 120 W
8 Ohm, 1% THD+N ..... 150 W

Typical Distortion, per channel
THD+N (80 kHz LPF @ 1 kHz rated output power).... 0.01%
IMD (SMPTE 4:1, 60 Hz & 7 kHz @ rated output power)... 0.03%

Signal To Noise Ratio
(22Hz - 22kHz bandwidth @ 1dB below rated output power)..... 105 dB

Frequency Response..... 10 Hz - 20 kHz +0, -0.5 dB
3 Hz - 65 kHz, +0, -3.0 dB

Input Sensitivity..... -10dBv on the RCA inputs, +4 dBu on the 1/4" inputs to achieve rated power. (Level control set to maximum)

Crosstalk (adjacent channels) ..... -75 dB, 1 kHz

Output DC Offset Voltage ..... ± 50 mV, DC Servo Controlled

Headphone Output Level..... 400 mW (into 100Ω @ 1% THD+N)

Dimensions (W x D x H) ..... 19″ x 11.5″ x 1.75″
483mm x 292mm x 44mm

Weight..... 15.4 lbs (7 kg)

Vendor #: 1780

Model: Clinitek Status +

Semi-Automated Urinalysis Lab Analyzer. Features: for routine urine tests (albumin, bilirubin, creatine, glucose, ketone, leukocytes, nitrite, pH, protein, specific gravity, urobilinogen) in urine samples. Automatic checks of test strips for humidity exposure and strip identification. Touch screen, RS232 interface. Connectivity to data management software or LIS/HIS.

Convenient Point-of-Care Urinalysis with Improved Clinical Information

The CLINITEK Status+ Analyzer—Improved data integrity with enhanced clinical information for point-of-care urinalysis testing

Automatic Checks

The CLINITEK Status®+ Analyzer is a CLIA-waived, point-of-care urinalysis analyzer that automates testing and provides improved clinical information when using new urinalysis test strips by Siemens Healthcare Diagnostics.

Ease of Use/Convenience

- Simple, intuitive touch screen operation
- Load test—analyzer does the rest
- Fast results—in-office test results in about 1 minute
- Automatic printed report—no manual transcription needed

Improved Data Integrity

- New analyzer, along with patented test strip technology, enables automatic checks (Auto-Checks) for:
  - Identification of Siemens strip type
  - Sample interference notes if common sample interferences are detected–availability dependent on strip type (This feature is not available in the U.S.)
  - Automatic error messages if strip has been exposed to humidity—only available with test strips that have the leukocyte pad
- Removes subjectivity of visual read results

Complete Point-of-Care Test Portfolio

- Multistix 10SG is the most widely used urinalysis test strip for routine testing
- Albumin-to-creatinine ratio automatically calculated with CLINITEK Microalbumin strips for early detection of kidney disease in patients with diabetes
- Analyzer accommodates cassette for CLINITEST® hCG testing for pregnancy

Future Ready

- Upgrade kits are available:
  - For analyzer connectivity to LIS/HIS, EMR (Electronic Medical Record) or data management software
  - For barcode reading capability

Answers for life.

CLINITEK Status+ Analyzer Specifications

Intended Use

The CLINITEK Status®+ Analyzer is a point-of-care urinalysis analyzer designed to read only Siemens Healthcare Diagnostics urine test strips and CLINITEST hCG cassettes.

Semi-quantitative Tests Measured

Routine urine tests: albumin, bilirubin, creatinine, glucose, ketone, leukocytes, nitrite, pH, protein, specific gravity, and urobilinogen

Kidney disease test: albumin-to-creatinine ratio

Pregnancy Test: Human Chorionic Gonadotropin (hCG)

User Interface

Touch Screen

Computer Interface

Uni-directional via Serial Port (RS232)

Data Entry

On-board Touch Screen

Power Requirements

Electrical Rating	100V - 240V AC, 50-60 Hz (with in-line lead)
Battery Operation	6 AA Batteries, non-rechargable

Dimensions/Weight

Depth:	10.70 in. or 27.2 cm
Width:	6.70 in. or 17.1 cm
Height:	6.20 in. or 15.8 cm
Weight:	3.65 lbs or 1.66 kg

Operation

Temperature Range:	18 to 30°C (64 to 86°F)
Humidity Range:	18-80% Relative Humidity, non-condensing

Calibration

Automatic, self-calibrating

Compliance

CLIA-waived, CE-marked, UL, EMC

New Features

Memory

Patient Test Results	950
QC Test Results	0
Operator IDs	700

Automatic Checks (Auto-Checks)*

Identification of strip type

Humidity exposure tested on every strip with leukocyte pad

Common sample-interference check available depending upon strip type (Not available in the U.S.)

* Available only when using Siemens test strips with IR or color bands.

Siemens Healthcare Diagnostics, a global leader in clinical diagnostics, provides healthcare professionals in hospital, reference, and physician office laboratories and point-of-care settings with the vital information required to accurately diagnose, treat, and monitor patients. Our innovative portfolio of performance-driven solutions and personalized customer care combine to streamline workflow, enhance operational efficiency, and support improved patient outcomes.

Product availability may vary from country to country and is subject to varying regulatory requirements. Please contact your local representative for availability.

B-6897

continued . . .

Rev. 11/11/19 S/B Printed in U.S.A.

MATERIALS:

Grab Bar — 18-8 S, type-304, 18-gauge (1.2mm) stainless steel tubing with satin-finish, slip-resistant surface. 1-1/2" (38mm) outside diameter. Ends are heliarc welded to flanges. Clearance between the grab bar and wall is 1-1/2" (38mm).

Concealed Mounting Flanges — 18-8 S, type-304, 11-gauge (3.2mm) thick, stainless steel plate; end flanges 2" x 3-1/8" (50 x 80mm) with holes for attachment to wall. Intermediate flanges 2-5/8" x 3-1/8" (65 x 80mm) wide x 3-1/8" (80mm) diameter.

Snap Flange Covers — 18-8 S, type-304, 22-gauge (0.8mm) drawn stainless steel with satin-finish. 3-1/4" (85mm) diameter x 1/2" (13mm) deep. Each cover snaps over mounting flange to conceal mounting screws.

STRENGTH:

Bobrick grab bars that provide 1-1/2" (38mm) clearance from wall can support loads in excess of 900 pounds (408kg) if properly installed. Other grab bar configurations can support loads in excess of 250 pounds (113kg) if properly installed, complying with accessible design (including ADAAG in the U.S.A.) for structural strength

Safety Warning: Grab bars are no stronger than the anchors and walls to which they are attached and, therefore, must be firmly secured in order to support the loads for which they are intended. To avoid potential injury, the building owner or maintenance personnel should remove the grab bar from service if the grab bar is not adequately secured to wall or if there is any observed damage to the welds.

INSTALLATION:

Provide concealed anchor device or backing as specified or required in accordance with local building codes before wall is finished. Fasten concealed mounting flanges to anchor device or backing with at least two screws opposing each other in each flange. Snap flange covers over each mounting flange to conceal mounting screws. Concealed anchor devices and mounting screws are not included with Bobrick grab bars and must be specified as an accessory.

For Grab Bars with an Intermediate Flange(s), Pull Snap-Flange Covers away from mounting flanges. Place grab bar in desired mounting location. Use intermediate flange as a template to mark location of mounting screws at intermediate flange only. Mark screw locations at the center of the slot in the middle of the double-keyhole shaped mounting holes (2) in the intermediate flange. Remove grab bar from wall. Drive the intermediate flange mounting screws into wall at marked locations. **Note:** Make sure to leave a space of just over 1/8" (3.17mm) between the underside of the screw head and the wall. Install grab bar on the wall by placing the round ends of the intermediate flange double-keyhole shaped mounting holes over the mounting screws (2) are located in the middle of the flange slots. Install the mounting screws into the wall at the end flanges and secure tightly. Tighten the mounting screws at the intermediate flange. Press all snap-flange covers into place to conceal mounting flanges.

Note: Recommend use of 1/4" or #14 sheet metal or wood screws to install Intermediate Flange. #12 screws may also be used.

Important Notes:

1. **Mounting Kits —** Bobrick offers a mounting kit for installing grab bars; **one Bobrick mounting kit is required for each flange.**

Mounting Kit No.	Description
252-30	Consists of # (3) 14 x 2½" type-304 stainless steel, Phillips round-head, sheet-metal screws.

2. **Grab Bar Fastener —** Bobrick offers a grab bar fastening system that secures all Bobrick grab bar series; **one Bobrick fastener is required for each flange.** Install grab bar without backing in wall requires minimum 5/8" (16mm) thick painted or tiled drywall.

WingIt™ Fastener No.	Description
251-4	Consists of 10–32 x 5/16" round-head, Phillips 18/8 stainless steel screws. (1) WingIt grab bar fastener.

3. **Optional Anchor Device —** Bobrick grab bar anchor device includes stainless steel machine screws to be used for attaching grab bars to anchors. **one Bobrick concealed anchor device is required for each flange.**

Optional Anchor No.	Description
2583	Anchor for 3/4" to 1" (19-25mm) panel 1 anchor required for each flange.
2586	Anchor for 1/2" to 1" (13mm) panel 1 anchor required for each flange.

SPECIFICATION:

Grab bar shall be type-304 stainless steel with satin-finish, slip-resistant surface. Grab bar shall have 18-gauge (1.2mm) wall thickness and 1-1/2" (38mm) outside diameter. Clearance between the grab bar and wall shall be 1-1/2" (38mm). Concealed mounting flanges shall be 11-gauge (3.2mm) thick stainless steel plate, 2" x 3-1/8" (50 x 80mm), and equipped with at least two screw holes for attachment to wall. Flange covers shall be 22 gauge (0.8mm), 3-1/4" (85mm) diameter x 1/2" (13mm) deep, and shall snap over mounting flange to conceal mounting screws and/or WingIt fasteners. Ends of grab bar shall pass through concealed mounting flanges and be heliarc welded to form one structural unit. Grab bar shall comply with accessible design (including ADAAG in the U.S.A.) for structural strength.

Grab Bar shall be Model _____ (insert model number) of Bobrick Washroom Equipment, Inc., Clifton Park, New York; Jackson, Tennessee; Los Angeles, California; Bobrick Washroom Equipment Company, Scarborough, Ontario; Bobrick Washroom Equipment Pty. Ltd., Australia; and Bobrick Washroom Equipment Limited, United Kingdom.

MATERIALS:

Grab Bar — 18-8 S, type-304, 18-gauge (1.2mm) stainless steel tubing with satin-finish, slip-resistant surface. 1-1/2" (38mm) outside diameter. Ends are heliarc welded to flanges. Clearance between the grab bar and wall is 1-1/2" (38mm).

Concealed Mounting Flanges — 18-8 S, type-304, 11-gauge (3.2mm) thick, stainless steel plate; end flanges 2" x 3-1/8" (50 x 80mm) with holes for attachment to wall. Intermediate flanges 2-5/8" x 3-1/8" (65 x 80mm) wide x 3-1/8" (80mm) diameter.

Snap Flange Covers — 18-8 S, type-304, 22-gauge (0.8mm) drawn stainless steel with satin-finish. 3-1/4" (85mm) diameter x 1/2" (13mm) deep. Each cover snaps over mounting flange to conceal mounting screws.

STRENGTH:

Bobrick grab bars that provide 1-1/2" (38mm) clearance from wall can support loads in excess of 900 pounds (408kg) if properly installed. Other grab bar configurations can support loads in excess of 250 pounds (113kg) if properly installed, complying with accessible design (including ADAAG in the U.S.A.) for structural strength

Safety Warning: Grab bars are no stronger than the anchors and walls to which they are attached and, therefore, must be firmly secured in order to support the loads for which they are intended. To avoid potential injury, the building owner or maintenance personnel should remove the grab bar from service if the grab bar is not adequately secured to wall or if there is any observed damage to the welds.

INSTALLATION:

Provide concealed anchor device or backing as specified or required in accordance with local building codes before wall is finished. Fasten concealed mounting flanges to anchor device or backing with at least two screws opposing each other in each flange. Snap flange covers over each mounting flange to conceal mounting screws. Concealed anchor devices and mounting screws are not included with Bobrick grab bars and must be specified as an accessory.

For Grab Bars with an Intermediate Flange(s), Pull Snap-Flange Covers away from mounting flanges. Place grab bar in desired mounting location. Use intermediate flange as a template to mark location of mounting screws at intermediate flange only. Mark screw locations at the center of the slot in the middle of the double-keyhole shaped mounting holes (2) in the intermediate flange. Remove grab bar from wall. Drive the intermediate flange mounting screws into wall at marked locations. **Note:** Make sure to leave a space of just over 1/8" (3.17mm) between the underside of the screw head and the wall. Install grab bar on the wall by placing the round ends of the intermediate flange double-keyhole shaped mounting holes over the mounting screws (2) are located in the middle of the flange slots. Install the mounting screws into the wall at the end flanges and secure tightly. Tighten the mounting screws at the intermediate flange. Press all snap-flange covers into place to conceal mounting flanges.

Note: Recommend use of 1/4" or #14 sheet metal or wood screws to install Intermediate Flange. #12 screws may also be used.

Important Notes:

1. **Mounting Kits —** Bobrick offers a mounting kit for installing grab bars; **one Bobrick mounting kit is required for each flange.**

Mounting Kit No.	Description
252-30	Consists of # (3) 14 x 2½" type-304 stainless steel, Phillips round-head, sheet-metal screws.

2. **Grab Bar Fastener —** Bobrick offers a grab bar fastening system that secures all Bobrick grab bar series; **one Bobrick fastener is required for each flange.** Install grab bar without backing in wall requires minimum 5/8" (16mm) thick painted or tiled drywall.

WingIt™ Fastener No.	Description
251-4	Consists of 10–32 x 5/16" round-head, Phillips 18/8 stainless steel screws. (1) WingIt grab bar fastener.

3. **Optional Anchor Device —** Bobrick grab bar anchor device includes stainless steel machine screws to be used for attaching grab bars to anchors. **one Bobrick concealed anchor device is required for each flange.**

Optional Anchor No.	Description
2583	Anchor for 3/4" to 1" (19-25mm) panel 1 anchor required for each flange.
2586	Anchor for 1/2" to 1" (13mm) panel 1 anchor required for each flange.

SPECIFICATION:

Grab bar shall be type-304 stainless steel with satin-finish, slip-resistant surface. Grab bar shall have 18-gauge (1.2mm) wall thickness and 1-1/2" (38mm) outside diameter. Clearance between the grab bar and wall shall be 1-1/2" (38mm). Concealed mounting flanges shall be 11-gauge (3.2mm) thick stainless steel plate, 2" x 3-1/8" (50 x 80mm), and equipped with at least two screw holes for attachment to wall. Flange covers shall be 22 gauge (0.8mm), 3-1/4" (85mm) diameter x 1/2" (13mm) deep, and shall snap over mounting flange to conceal mounting screws and/or WingIt fasteners. Ends of grab bar shall pass through concealed mounting flanges and be heliarc welded to form one structural unit. Grab bar shall comply with accessible design (including ADAAG in the U.S.A.) for structural strength.

Grab Bar shall be Model _____ (insert model number) of Bobrick Washroom Equipment, Inc., Clifton Park, New York; Jackson, Tennessee; Los Angeles, California; Bobrick Washroom Equipment Company, Scarborough, Ontario; Bobrick Washroom Equipment Pty. Ltd., Australia; and Bobrick Washroom Equipment Limited, United Kingdom.

BOBRICK

Technical Data

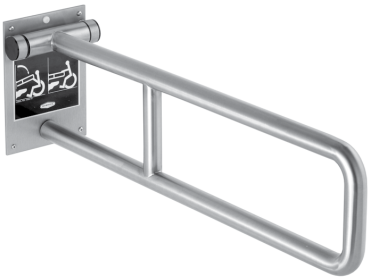
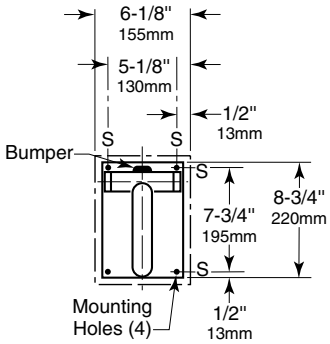
SWING-UP GRAB BAR

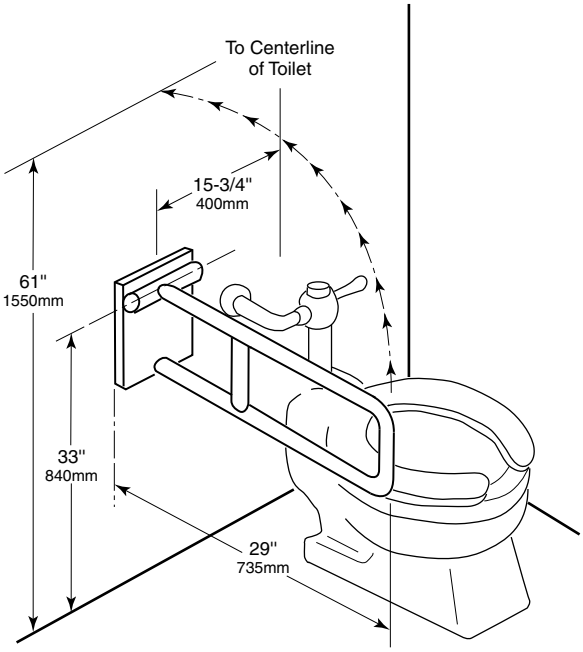
B-4998

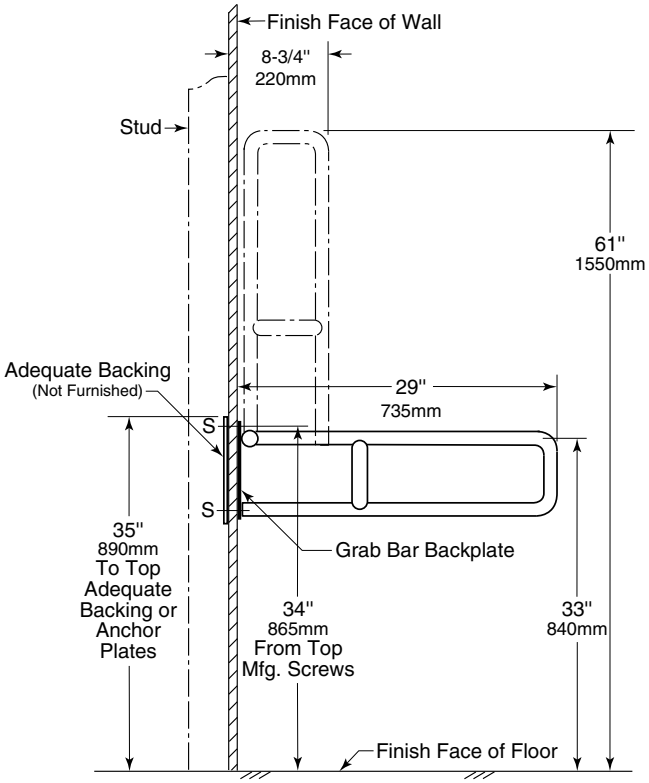
Specify Finish Required: ☐ Satin-finish
☐ Satin-finish with peened gripping surface; add suffix .99 to model number





Grab Bar Backplate





MATERIALS:

Grab Bar — 18-8, Type-304, 18-gauge (1.2mm) stainless steel tubing with satin-finish. 1–1/4" (32mm) outside diameter. Ends are heliarc welded to flanges.

Backplate — 18-8, Type-304, 3/16" (5mm) thick, satin-finish stainless steel with four screw holes for attachment to wall.

continued . . .

Revised 9/17/18 Printed in U.S.A.

OPERATION:

Swing-up grab bar is manually raised for approach or departure and lowered to horizontal position for support; once grab bar is raised to the full upright (vertical) position, counterweighted design prevents grab bar from falling back down to the full horizontal position.

STRENGTH:

Swing-up grab bar can support loads in excess of 500 pounds (227kg) if properly installed.

Safety Warning: Grab bars are no stronger than the anchors and walls to which they are attached and, therefore, must be firmly secured in order to support the loads for which they are intended. To avoid potential injury, the building owner or maintenance personnel should remove the grab bar from service if the grab bar is not adequately secured to wall or if there is any observe damage to the welds.

INSTALLATION:

Provide concealed anchor device or backing as specified or required in accordance with local building codes before wall is finished. Fasten grab bar to anchor device or backing. Concealed anchor devices and mounted screws are not included with Bobrick grab bars and must be specified as an optional accessory.

SPECIFICATION:

Grab bar shall be Type-304 stainless steel with satin finish. Grab bar shall have 18-gauge (1.2mm) wall thickness and 1–1/4" (32mm) outside diameter. Backplate shall be 3/16" (5mm) thick stainless steel, equipped with screw holes for attachment to wall. Swing-up grab bar shall be manually raised for approach or departure and lowered to horizontal position for support; counterweighted design shall prevent grab bar from falling back down to the full horizontal position once grab bar is raised to the full upright (vertical) position.

Swing-Up Grab Bar shall be Model _____ (insert model number) of Bobrick Washroom Equipment, Inc., Clifton Park, New York; Jackson, Tennessee; Los Angeles, California; Bobrick Washroom Equipment Company, Scarborough, Ontario; Bobrick Washroom Equipment Pty. Ltd., Australia; and Bobrick Washroom Equipment Limited, United Kingdom.

Security Consoles

Making sure it's secure.™

Top Load Console (pictured)
36″ H x 20.25″ W x 19.5″ D
Holds 39.54 gallons of paper.

See reverse for more Consoles and Bins.

Shred-it's ultra-strong security consoles give you the efficiency, durability and flexibility you expect.

- Paper securely held in durable polyester bag for efficient and secure retrieval

Higher capacity than most of the consoles in the industry — saving you money

- Wide variety of lock systems for added security and assurance
- Custom finish options available (Cherry, Mahogany, Light Oak, Birch) to coordinate with your office environment
- Specifically designed with wide feed slots that can take up to 400 pieces of paper at a time and cannot be retrieved

Made with recycled wood materials compliant with the Environmentally Preferred Product Certification (EPP), ensuring better office air quality.

- Multi-media consoles feature multiple feed slot design for various applications (paper, CDs, hard drives, videotapes, pill bottles, etc.)

Security Consoles and Bins

Making sure it's secure.™

Available in a variety of styles to meet your application and security needs.

Front Load Console
36″ H x 20.25″ W x 19.5″ D
Front-loading beveled slot and internal security plate ensure documents cannot be removed. Holds 39.54 gallons of paper.

Mini Console
26″ H x 20.25″ W x 19.5″ D
Designed to fit under a workstation where space is at a premium. Holds 36.01 gallons of paper. (Each Mini Console will hold up to 250 pieces of paper.)

Double Console
62″ H x 20.25″ W x 19.5″ D
Stacks two high. Designed to fit in tight spaces. Holds 81.98 gallons of paper.

Wood-Finish Top Load Console
36″ H x 20.25″ W x 19.5″ D
Top-loading beveled slot and internal security plate ensure documents cannot be removed. Holds 39.54 gallons of paper.

- **Mahogany**
- **Birch**
- **Light Oak**
- **Cherry**

Multi-Media Console
35″ H x 10″ W x 19.5″ D
Designed for use of media items such as DVDs. Features multiple feed slot. Holds 21.1 gallons of paper.

Shred-it's high volume security bins are extremely durable and easy to maneuver.

- Top-loading, durable plastic containers for high paper volumes
- Ideal for higher volume areas such as mailrooms, copy rooms or warehouses
- Security slot to ensure paper cannot be retrieved from inside
- Wheeled and well-balanced for easy handling
- Hasp design for padlock security

2-Bag Bin
36″ H x 40″ W x 20″ D
Holds 60 gallons of paper.

4-Bag Bin
35″ H x 40″ W x 27.5″ D
Holds 90 gallons of paper.

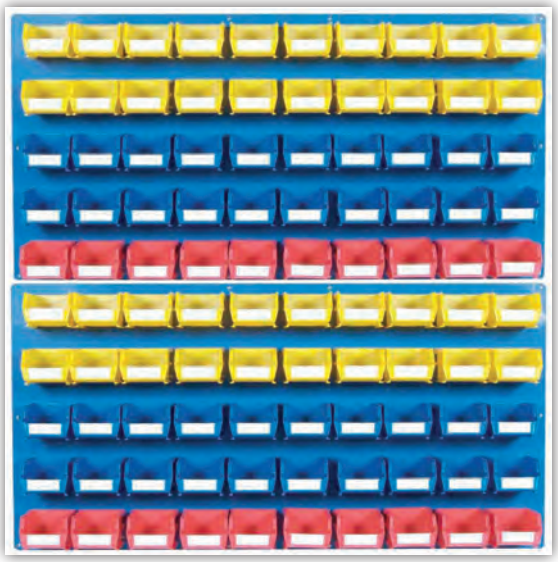
Louvered Hanging Bin Panels

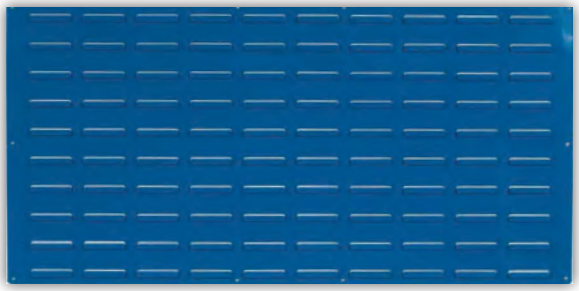


- *Easy method to hang plastic bins and sort parts by part number, size or usage.*
- *Louvered panels are blue epoxy coated heavy duty 18 gauge steel.*
- *Louvered panels are available as mobile and stationary bin storage options.*
- *Ideal 5S and Lean Manufacturing solution for keeping small parts and accessories organized.*
- *Hanging bins are easy to remove and replace on louvers improving MRO and factory productivity.*
- *Hang up to 50 bins on each panel using LocBins or any plastic hanging bin.*
- *LPC-1 and LPC-2 offers a heavy duty Mobile Bin Cart to get parts to the work area with ease.*
- *All mounting hardware to attach panels to a flat concrete, stud, or hollow wall included.*

LocBins sold separately (page 10)

LVP-2

LVP-1



Also available as Mobile Tool Carts (page 15)

Hanging Bins

2-205B

- *Plastic Hanging Bins provide easy organization for small parts. They can sit on any flat surface or mount on a wall using 5-600 Wall Mount Rail System or on Louvered Panels. Bins are available in red, yellow, blue, black or translucent for sorting multiple kinds of parts including unlimited styles of hardware, small tools and accessories and more. Bins are guaranteed not to crack or peel under normal use.*
- *Plastic Hanging Bins assist in organizing small parts and tool accessories.*
- *Bins are made of commercial grade polypropylene.*
- *Hanging bins can be used on flat surfaces, or mounted with Triton 5-600 wall mount rails, on the LVP-1, LVP-2 or any standard louvered panel, or on 77500 BinClip™.*
- *DuraHook® 77500 BinClip™(s) are universally compatible for mounting Plastic Hanging Bins on 1/4" and 1/8" pegboard.*
- *Includes identification labels.*

VHM™ Series Workstation with Rear Extension

Mounting Channel WC-0002-11
- 37”/94 cm Seismic channel
- Includes mounting hardware and instructions

VHM with 8”/20.3 cm Rear Extension WS-0004-54
- Variable Height Mount with 8”/20.3 cm rear extension
- Provides lateral positioning, extension, gas spring-assisted height adjustment, and swivel adjustments for optimal viewing angle
- Features a parallel linkage for constant viewing angle throughout the vertical range of motion
- Vertical motion range +/- 60 degrees with 17”/43.2 cm total travel
- Lateral motion range (from perpendicular to the wall) +/- 90 degrees
- Folds flush for minimal foot print while stowed
- Dual pivoting extension is ideal for obtaining additional reach and allows fold over feature
- Optional rotation stop at front pivot of extension +/-100 (200 degrees total range)
- Cable management
- Maximum load: 30 lbs/13.6 kg

Add the weight of all devices, including GCX mounting accessories, to ensure the total weight does not exceed the arm’s weight limit

(Optional VHM Arms)

VHM with 8”/20.3 cm Rear Extension WS-0004-57
(40 lb/18.1 kg Maximum Load)

VHM with 14”/35.6 cm Rear Extension WS-0004-55
(30 lb/13.6 kg Maximum Load)

VHM with 14”/35.6 cm Rear Extension WS-0004-58
(40 lb/18.1 kg Maximum Load)

Mounting Bracket for Monitor/Keyboard Combinations FLP-0004-89
- Folding ergo-bracket allows the keyboard tray/plate to be folded upward for security or to save space
- Provides ergonomic separation of display and keyboard with independent display tilt adjustment
- Product weight: 9.2 lbs/4.2 kg

Keyboard Tray with Slide-Out Mouse Trays WM-0023-47
- 20.8”/52.8 cm Wide tray for standard keyboard with left/right slide-out keyboard trays
- 8”/20.3 cm x 6.5”/16.5 cm Slide-out mouse trays
- Padded wrist rest
- Includes mouse house, mouse pads
- Product weight: 5.5 lbs/2.5 kg

Accessories:

Display Handle FLP-0008-12
- Adjustable width to accommodate displays from 11.5”/29.2 cm - 18.5”/47 cm
- Product weight: 3 lbs/1.4 kg

CPU Mount WM-0007-41
- 25 lbs/11.3 kg max load
- 14”/35.6 cm max height
- 14”/35.6 cm max depth
- Product weight: 5 lbs/2.3 kg

GCX Mounting Channels

Mounting channels are used to secure GCX mounting products and accessories. Channels are made of high strength aluminum and have a durable clear anodized satin finish.

Channels permit mounting solutions to be set anywhere within the length of the channel. Various lengths of channel are available to accommodate applications and devices with different vertical height requirements. When considering long lengths of channel, it may be useful to consider utilizing two shorter sections of channel with enough space between the two sections to permit ease of installation and maintenance of the mounted devices.

Three types of channels are available: Standard, Seismic, and Flangeless.

Standard and Seismic channels: Intended to be secured to metal or wood studs with gypsum board or similar wall covering material. Seismic channels provide additional anchor points for security. The 19" seismic channel is California OSHPD pre-approved. Refer to OSHPD documents OPA-0079-07 and OPA-0697-07.

Flangeless channels: Intended to be secured to hard surfaces, e.g., metal walls, surfaces of anesthesia machines, or other devices. Flangeless channels can also be secured to prefabricated headwall systems such as those manufactured by Hill-Rom, Modular Services and Hospital Systems.

Safe installation of a channel is important and is the installer's responsibility. Installation should be performed by qualified personnel. Please contact GCX if you have questions about channel selection or installation.

SMARTMOUNT®

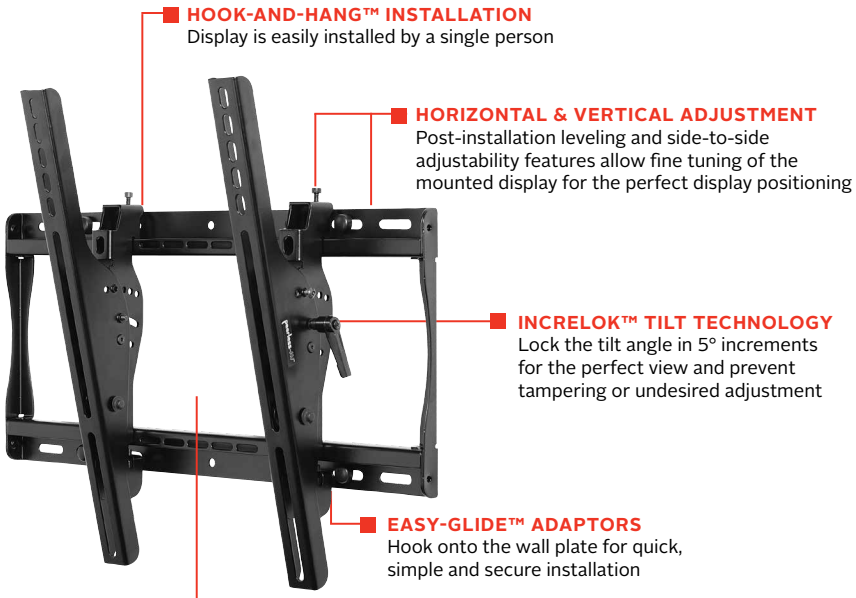
Universal Tilt Wall Mount

FOR 32" TO 50" DISPLAYS

The SmartMount® Universal Tilt Wall Mount series offers the most versatile installation features and mounting options. Horizontal and vertical adjustment abilities allow for post installation leveling and side-to-side positioning, making it easier than ever to find the perfect TV position. Lock the tilt angle at installation to prevent tampering or moving with the IncreLok™ tilt technology. Security screws provided in the ST640 models deter tampering and theft. The open wall plate design offers total wall access, increasing the electrical and cable management options. The display can now simply be installed by a single person with the Hook-and-Hang™ system. The Easy-Glide™ adaptors hook onto the wall plate for an overall quick, simple and secure installation.

- Universal mount fits displays with mounting patterns up to 458 x 405mm (18.02" W x 15.95" H) and accommodates up to 400 x 400mm VESA® patterns
- Adjustable 15° forward tilt and 5° backward tilt for finding the optimal viewing angle
- Easy-Grip™ ratcheting handle locks tilt angle into place
- Up to 0.25" (6mm) of vertical adjustment on each universal display adaptor bracket for post-installation leveling and height adjustment fine-tuning
- Horizontal display adjustment up to 6.00" (152mm) for centering display on wall
- Landscape to portrait mounting options increases installation versatility. Please check display dimensions against the wall plate when used in portrait mode*
- Includes all necessary wall and display attachment hardware
- Integrated security options available
- Design is UL listed and tested to four times stated load capacity
- For mounts requiring theft resistant hardware, installed with security tool (included), please purchase ST640
- For mounts requiring standard hardware, installed with a Philips screwdriver, please purchase ST640P

* Requires display to be removed and reset on mount



+15°/-5° of tilt for versatile viewing angles.

Comes in color packaging with included installation hardware and easy to follow instructions.

FILMOP USA

Industrial Cleaning Equipment

Maxi Jolly Split bucket system

The ideal solution for professional janitorial mopping

Four concepts join together for better cleaning:

1. ***Separation of cleaning solution from rinse water***
   Split bucket system with removable division plate and rear drain
2. ***Open bottom wringers***
   For easy mop rinsing working with Spin-n-drop system (rinse through wringer)
3. ***Spin-n-drop flat mop system***
   Folding mop holder designed to attach, lock, hold and fold flat mops
4. ***Long looped microfiber mop technology***
   3-Dimensional long looped microfiber mops

Benefits

- ***Reduces cross-contamination***
- ***Reduces drying time***
- ***Increases productivity***
- ***Controls chemical usage***
- ***Saves water***
- ***Saves time***
- ***Saves labor***
- ***Ergonomic system***

Dip mop into cleaning solution in front tank

Wring and mop surface

After mopping, rinse mop in back tank to remove soil

Wring out soil ..repeat process

Removable plastic division plate with overmolded rubber seal

PATENTED

Rear drain eliminates bucket liftings

Rinse tank draining

Remove divider to completely drain

DUAL COMPARTMENT STAINLESS STEEL WARMING CABINET

Introduction

SKYTRON Stainless Blanket and Solution Warming Cabinets are designed to provide evenly heated storage of blankets, sterile water and saline solutions used in the care of patients in surgery, recovery, OB/GYN, ICU, ER, trauma areas, and patient floors. The SKYTRON Model SS2207-M(G) offers a dual compartment full height unit that is able to hold a combination of warm blankets and fluids in individually controlled compartments for today's busy environments.

Technical Data

SKYTRON Warming Cabinets are manufactured from stainless steel with double wall insulation and polished to a #4 satin finish. The door is constructed of double pan stainless steel and insulated and polished to a #4 finish. Optional glass door is an aluminum framework with double pane tempered glass for low heat loss. Warming chamber designed to maintain temperatures +/- 3 degrees of set point though the use of digital controls. Door is manufactured with a full perimeter accordion style magnetic gasket. Cabinet shall be furnished with three adjustable shelves and two fixed shelves.

Features

USB port for data retrieval
Keyed temperature lockout
Digital operation
Continuous readout of chamber temperature and set point temperature
Temperature accuracy +/- 3 degrees
Audible and visual over-temp alarms
Rapid uniform heating in 2-6 hours
Chamber sizes:
- **Upper: 5.27 cubic ft. (149 liters)**
- **Lower: 11.93 cubic ft. (338 liters)**

Temperature range 90°-160° F (32-71 °C)

CARE AND MAINTENANCE

- Always purchase the correct size and grade of battery most suitable for intended use.
- Clean the battery contacts and also those of your clock prior to battery installation.
- Ensure the battery is installed with correct polarity (+ and -).
- Remove battery from your clock when it is not used for an extended period of time.
- Promptly remove an expired battery.

SPECIFICATIONS

Battery Requirements: 1 AA (IEC LR6) required in movement (Alkaline recommended)

Battery life: 1 battery; over 12 months

WARRANTY AND SUPPORT

La Crosse Technology, Ltd. provides a 1-year limited time warranty (from date of purchase) on this product relating to manufacturing defects in materials & workmanship.

Before returning a product, please contact our friendly customer support with questions or visit our online help.

Phone: 1-608-782-1610
Online: www.lacrossetechnology.com/support/

⚠ **WARNING:** This product can expose you to chemicals including styrene, which is known in the State of California to cause cancer. For more information go to: https://www.p65warnings.ca.gov/

LA CROSSE®
TECHNOLOGY

12.5 Inch Atomic Wall Clock

Model: WT-3122A
DC: 052518

For information about WWVB, atomic time signal visit:
http://bit.ly/AtomicTime

POWER UP

1. Select Time Zone and DST ON or OFF.

2. Insert 1 AA battery into your clock.

3. For best reception, place your clock on a wall that faces Ft. Collins, Colorado. During the night, your clock will set itself.

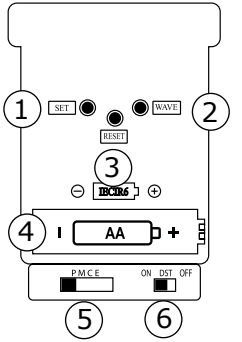
IMPORTANT:

- Hands will move to 12:00 and search for the atomic time signal.
- After 8-10 minutes if no atomic time signal is received, the clock will start running from 12:00.
- Your clock will continue to search for the WWVB atomic time signal.
- Allow up to 5 nights for the clock to receive the atomic time signal.

MANUALLY SET TIME

- In certain areas, your clock may not be able to receive the atomic time signal due to signal strength or interference.
- In this case, your clock can be set manually and operate as a quartz clock until the WWVB signal can be received.

Note: The atomic time signal will override manual settings.



1. SET
2. WAVE (Atomic search)
3. RESET
4. Battery
5. Time Zone Selector
6. Daylight Saving Time Selector

Set Time:

1. Hold SET for 3 seconds
2. Press and Hold SET to move hands quickly.
3. Press and release SET to move hands forward step by step.

Reset:

If the clock does not respond when trying to manually set your time, press the RESET button on the movement case.

OptiPlex 7400 All-in-One

Setup and Specifications

Regulatory Model: W26C
Regulatory Type: W26C005/W26C006
March 2022
Rev. A00

3

Specifications of OptiPlex 7400 All-in-One

Dimensions and weight

The following table lists the height, width, depth, and weight of your OptiPlex 7400 All-in-One.

Table 2. Dimensions and weight

Description	Values
Height:	
Front height	344.00 mm (13.54 in.)
Rear height	344.00 mm (13.54 in.)
Width	540.20 mm (21.26 in.)
Depth	52.60 mm (2.07 in.)
Weight **NOTE:** The weight of your computer depends on the configuration ordered and manufacturing variability.	Weight without stand • 6.83 Kg (15.06 lbs.)—maximum • 6.18 Kg (13.62 lbs.)—minimum

Processor

The following table lists the details of the processors supported by your OptiPlex 7400 All-in-One.

NOTE: Global Standard Products (GSP) are a subset of Dell's relationship products that are managed for availability and synchronized transitions on a worldwide basis. They ensure the same platform is available for purchase globally. This allows customers to reduce the number of configurations managed on a worldwide basis, thereby reducing their costs. They also enable companies to implement global IT standards by locking in specific product configurations worldwide.

Device Guard (DG) and Credential Guard (CG) are the new security features that are only available on Windows 10 Enterprise today. Device Guard is a combination of enterprise-related hardware and software security features. When you configure together, it locks a device and it can only run trusted applications. Credential Guard uses virtualization-based security to isolate secrets (credentials) and only privileged system software can access the system. Unauthorized access to these secrets can lead to credential theft attacks. Credential Guard prevents these attacks by protecting NTLM password hashes and Kerberos Ticket Granting Tickets.

NOTE: Processor numbers are not a measure of performance. Processor availability subject to change and may vary by region/country.

Table 3. Processor

Description	Option one	Option two	Option three	Option four	Option five	Option six	Option seven
Processor type	12th Generation Intel Core i3-12100	12th Generation Intel Core i3-12300	12th Generation Intel Core i5-12400	12th Generation Intel Core i5-12500	12th Generation Intel Core i5-12600	12th Generation Intel Core i7-12700	12th Generation Intel Core i9-12900

Integrated graphics	Intel UHD Graphics 730	Intel UHD Graphics 730	Intel UHD Graphics 730	Intel UHD Graphics 770	Intel UHD Graphics 770	Intel UHD Graphics 770	Intel UHD Graphics 770

Chipset

The following table lists the details of the chipset supported by your OptiPlex 7400 All-in-One.

Table 4. Chipset

Description	Values
Chipset	Intel Q670 PCH
Processor	12th Generation Intel Core i3/i5/i7/i9
DRAM bus width	• 64-bit (for single-channel) • 128-bit (for dual-channel)
Flash EPROM	32 MB
PCIe bus	Up to Gen 3.0

Operating system

Your OptiPlex 7400 All-in-One supports the following operating systems:

- windows 11 Home, 64-bit
- Windows 11 Home National Academic, 64-bit
- Windows 11 Pro, 64-bit
- Windows 11 Pro National Academic, 64-bit
- Windows 11 CMIT Government Edition, 64-bit (China only)
- Windows 11 Downgrade (Windows 10 image)
- Ubuntu Linux 20.04 LTS, 64-bit
- Kylin Linux Desktop version 10.1 (China only)

For more information about Dell OS Recovery image, see How to Download and Use the Dell OS Recovery Image in Microsoft Windows, at Dell support site.

Commercial platform Windows 11 N-2 and 5-year operating system supportability:

All newly introduced 2019 and later commercial platforms (Latitude, OptiPlex, and Dell Precision) will qualify and ship with the most current factory installed Semi-Annual Channel Windows 11 version (N) and qualify (but not ship) the previous two versions (N-1, N-2). The OptiPlex 7400 All-in-One will RTS with Windows 11 version v20H2 at time of launch, and this version will determine the N-2 versions that are initially qualified for this platform.

For future versions of Windows 11, Dell continues to test the commercial platform with coming Windows 11 releases during device production and for five years post-production, including both fall and spring releases from Microsoft.

For additional information about N-2 and 5-year Windows operating system supportability, see the Dell Windows as a Service (WaaS), at Dell support site.

EOML 411

The OptiPlex 7400 All-in-One continues to test the coming Semi-Annual Channel Windows 11 version releases for five years post-production, including both fall and spring releases from Microsoft.

Memory

The following table lists the memory specifications of your OptiPlex 7400 All-in-One.

Table 5. Memory specifications

Description	Values
Memory slots	Two-SoDIMM
Memory type	DDR4
Memory speed	3200 MHz
Maximum memory configuration	64 GB
Minimum memory configuration	4 GB
Memory size per slot	4 GB, 8 GB, 16 GB, 32 GB
Memory configurations supported	• 4 GB, 1 x 4 GB, DDR4, 3200 MHz • 8 GB, 1 x 8 GB, DDR4, 3200 MHz • 16 GB, 1 x 16 GB, DDR4, 3200 MHz • 16 GB, 2 x 8 GB, DDR4, 3200 MHz, dual-channel • 32 GB, 1 x 32 GB, DDR4, 3200 MHz • 32 GB, 2 x 16 GB, DDR4, 3200 MHz, dual-channel • 64 GB, 2 x 32 GB, DDR4, 3200 MHz, dual-channel

Memory matrix

The following table lists the memory configurations supported for your OptiPlex 7400 All-in-One.

Table 6. Memory matrix

Configuration	Slot	
	SO-DIMM1	SO-DIMM2
4 GB DDR4	4 GB	NA
8 GB DDR4	8 GB	NA
16 GB DDR4	16 GB	NA
16 GB DDR4	8 GB	8 GB
32 GB DDR4	32 GB	NA
32 GB DDR4	16 GB	16 GB
64 GB DDR4	32 GB	32 GB

External ports

The following table lists the external ports of your OptiPlex 7400 All-in-One.

Table 7. External ports

Description	Values
Network port	One RJ45 Ethernet port (rear)
USB ports	• One USB 3.2 Gen 2x2 Type-C port (side) • One USB 3.2 Gen 1 port with PowerShare (side) • Two USB 3.2 Gen 2 ports (rear) • Two USB 3.2 Gen 1 ports with Smart Power On (rear)
Audio port	• One universal audio port (side) • One Line-out audio port (rear)
Video port	• One DisplayPort++ 1.4a/HDCP 2.3 port • One HDMI-IN—HDMI 1.4a port • One HDMI-OUT—HDMI 2.0 port
Media-card reader	One SD 4.0 card slot (side)
Power-adapter port	Not supported
Security-cable slot	One Kensington security-cable slot

- PowerShare port—Provides data transfer speed up to 5 Gbps. PowerShare enables you to charge your USB devices even when your computer is turned off.
- Smart Power On port—Provides data transfer speed up to 5 Gbps. Wakes the computer from standby with the keyboard or mouse connected to this port through BIOS settings.

Internal slots

The following table lists the internal slots of your OptiPlex 7400 All-in-One.

Table 8. Internal slots

Description	Values
PCIe expansion card slots	Not supported
mSATA	Not supported
SATA	One SATA slot for 2.5-inch hard drive (with UMA configuration)
M.2	• One M.2 2230 slot for Wi-Fi and Bluetooth card • Two M.2 2230/2280 slots for SSD **NOTE:** To learn more about the features of different types of M.2 cards, see the knowledge base article 000144170 at www.dell.com/support.

Ethernet

The following table lists the wired Ethernet Local Area Network (LAN) specifications of your OptiPlex 7400 All-in-One.

Table 9. Ethernet specifications

Description	Values
Model number	Intel i219-LM
Transfer rate	10/100/1000 Mbps

Wireless module

The following table lists the Wireless Local Area Network (WLAN) module specifications of your OptiPlex 7400 All-in-One.

Table 10. Wireless module specifications

Description	Option one	Option two	Option three
Model number	Intel AX201	Intel AX211	Realtek RTL8822CE
Transfer rate	Up to 2400 Mbps	Up to 2400 Mbps	Up to 867 Mbps
Frequency bands supported	2.4 GHz/5 GHz	2.4 GHz/5 GHz/6 GHz	2.4 GHz/5 GHz
Wireless standards	• WiFi 802.11a/b/g • Wi-Fi 4 (WiFi 802.11n) • Wi-Fi 5 (WiFi 802.11ac) • Wi-Fi 6 (WiFi 802.11ax)	• WiFi 802.11a/b/g • Wi-Fi 4 (WiFi 802.11n) • Wi-Fi 5 (WiFi 802.11ac) • Wi-Fi 6E (WiFi 802.11ax)	• Wi-Fi 802.11a/b/g • Wi-Fi 4 (Wi-Fi 802.11n) • Wi-Fi 5 (Wi-Fi 802.11ac)
Encryption	• 64-bit/128-bit WEP • AES-CCMP • TKIP	• 64-bit and 128-bit WEP • AES-CCMP • TKIP	• 64-bit/128-bit WEP • AES-CCMP • TKIP
Bluetooth	Bluetooth 5.2	Bluetooth 5.2	Bluetooth 5.0

Audio

The following table lists the audio specifications of your OptiPlex 7400 All-in-One.

Table 11. Audio specifications

Description	Values
Audio controller	Realtek Codec ALC3289
Stereo conversion	Realtek Codec ALC3289 capability supporting 44.1 k/48 k/96 k/192 kHz sample rate DAC conversion
Internal audio interface	High definition audio interface
External audio interface	Universal audio jack
Number of speakers	Two (Stereo speakers with Waves MaxxAudio® Pro, 5W x 2 = 10 W total)
Internal-speaker amplifier	Realtek Amplifier ALC1302

Table 11. Audio specifications (continued)

Description		Values
External volume controls		No hardware volume buttons
Speaker output:		
	Average speaker output	5 W
	Peak speaker output	6 W
Subwoofer output		Not applicable
Microphone		Two—MEMS microphones

Storage

This section lists the storage options on your OptiPlex 7400 All-in-One.

Table 12. Storage matrix

Storage		Single M.2 socket	2nd M.2 socket
M.2 SSD Boot		Yes	Yes
M.2 SSD Boot	SSD	Yes	Yes
M.2 SSD Boot	SSD	RAID0 or RAID1	RAID0 or RAID1

Table 13. Storage specifications

Storage type	Interface type	Capacity
M.2 2230, Class 35 SSD	PCIe NVMe Gen3 x4	Up to 1 TB
M.2 2230, Class 35 SSD, self-encrypting drive	PCIe NVMe Gen3 x4	256 GB
M.2 2280, Class 40 SSD	PCIe NVMe Gen4 x4	Up to 2 TB
M.2 2280, Class 40 SSD, self-encrypting drive	PCIe NVMe Gen3 x4	Up to 1 TB

RAID (Redundant Array of Independent Disks)

For optimal performance when configuring drives as a RAID volume, it requires identical drive models.

RAID 0 (Striped, Performance) volumes benefit from higher performance when drives are matched because the data is split across multiple drives: any IO operations with block sizes larger than the stripe size will split the IO and become constrained by the slowest of the drives. For RAID 0 IO operations where block sizes are smaller than the stripe size, whichever drive the IO operation targets will determine the performance, which increases variability and results in inconsistent latencies. This variability is particularly pronounced for write operations and it can be problematic for applications that are latency sensitive. One such example of this is any application that performs thousands of random writes per second in very small block sizes.

RAID 1 (Mirrored, Data Protection) volumes benefit from higher performance when drives are matched because the data is mirrored across multiple drives: all IO operations must be performed identically to both drives, thus variations in drive performance when the models are different, results in the IO operations completing only as fast as the slowest drive. While this does not suffer the variable latency issue in small random IO operations as with RAID 0 across heterogeneous drives, the impact is nonetheless large because the higher performing drive becomes limited in all IO types. One of the worst examples of constrained performance here is when using unbuffered IO. To ensure writes are fully committed to non-volatile regions of the RAID volume, unbuffered IO bypasses cache (for example by using the Force Unit Access bit in the NVMe protocol) and the IO

operation will not complete until all the drives in the RAID volume have completed the request to commit the data. This kind of IO operation completely negates any advantage of a higher performing drive in the volume.

Care must be taken to match not only the drive vendor, capacity, and class, but also the specific model. Drives from the same vendor, with the same capacity, and even within the same class, can have very different performance characteristics for certain types of IO operations. Thus, matching by model ensures that the RAID volumes is comprised of an homogeneous array of drives that will deliver all the benefits of a RAID volume without incurring the additional penalties when one or more drives in the volume are lower performing.

Media-card reader

The following table lists the media cards supported by your OptiPlex 7400 All-in-One.

Table 14. Media-card reader specifications

Description	Values
Media-card type	One Secure Digital (SD) 4.0 card
Media-cards supported	• Secure Digital High Capacity (SDHC) • Secure Digital Extended Capacity (SDXC) • Secure Digital (SD) 4.0 • SD UHS-I (UHS104) • SD UHS-II
NOTE: The maximum capacity supported by the media-card reader varies depending on the standard of the media card installed in your computer.	

Camera

The following table lists the camera specifications of your OptiPlex 7400 All-in-One.

Table 15. Full HD RGB Infrared Webcam

Description	Values
Number of cameras	One
Camera type	FHD RGB camera/Infrared camera
Camera location	Front pop-up camera
Camera sensor type	CMOS sensor technology
Focus detail	• Fixed focus • Focus area—23 cm ~ Infinity
Camera resolution:	
Still image	2.07 megapixels
Video	1920 x 1080 (FHD) at 30 fps
Infrared camera resolution:	
Still image	0.30 megapixels
Video	640 x 480 (VGA) at 30 fps
Diagonal viewing angle:	

Table 15. Full HD RGB Infrared Webcam (continued)

Description		Values
	Camera	77.50 degrees
	Infrared camera	82.90 degrees

Table 16. Full HD RGB Webcam

Description		Values
Number of cameras		One
Camera type		FHD RGB camera
Camera location		Front pop-up camera
Camera sensor type		CMOS sensor technology
Camera resolution:		
	Still image	2.07 megapixels
	Video	1920 x 1080 (FHD) at 30 fps
Diagonal viewing angle:		77.40 degrees

Power ratings

The following table lists the power rating specifications of OptiPlex 7400 All-in-One.

Table 17. Power ratings

Description	Option one	Option two
Type	160 W Bronze	220 W Platinum
Input voltage	90 VAC to 264 VAC	90 VAC to 264 VAC
Input frequency	47 Hz to 63 Hz	47 Hz to 63 Hz
Input current (maximum)	3.6 A	3.6 A
Output current (continuous)	• +19.5 VA/7.5 A • +19.5 VB/7.0 A Standby mode: • +19.5 VA/0.5 A • +19.5 VB/1.75 A	• +19.5 VA/8.5 A • +19.5 VB/9.2 A Standby mode: • +19.5 VA/0.5 A • +19.5 VB/1.75 A
Rated output voltage	• +19.5 VA • +19.5 VB	• +19.5 VA • +19.5 VB
Temperature range		
Operating	5°C to 42°C (41°F to 107°F)	5°C to 42°C (41°F to 107°F)
Storage	-40°C to 70°C (-40°F to 158°F)	-40°C to 70°C (-40°F to 158°F)

Power supply connector

The following table lists the Power supply connector specifications of your OptiPlex 7400 All-in-One.

Table 18. Power supply connector

160 W (80 PLUS Bronze)	• One 16 pin connector for system board

Table 18. Power supply connector (continued)

	• One 2 pin connector for LED
220 W (80 PLUS Platinum)	• One 16 pin connector for system board • One 2 pin connector for LED

Display

The following table lists the display specifications of your OptiPlex 7400 All-in-One.

Table 19. Display specifications

Description		Option one (non-touch display)	Option two (touch-display)
Display type		Full High Definition (FHD), Low Blue Light	Full High Definition (FHD)
Display-panel technology		Wide Viewing Angle (WVA)	Wide Viewing Angle (WVA)
Display-panel dimensions (active area):			
	Height	296.46 mm (11.67 in.)	296.46 mm (11.67 in.)
	Width	527.04 mm (20.75 in.)	527.04 mm (20.75 in.)
	Diagonal	604.70 mm (23.81 in.)	604.70 mm (23.81 in.)
Display-panel native resolution		1920 x 1080	1920 x 1080
Luminance		• 250 Nits (typical) • 200 Nits (minimum)	• 250 Nits (typical) • 200 Nits (minimum)
Megapixels		2.07	2.07
Color gamut		99% sRGB (typical)	72% NTSC typical
Pixels Per Inch (PPI)		92	92
Contrast ratio		• 700:1 (minimum) • 1000:1 (typical)	• 700:1 (minimum) • 1000:1 (typical)
Response time		• 25 ms (maximum) • 14 ms (typical)	• 25 ms (maximum) • 14 ms (typical)
Refresh rate		60 Hz	60 Hz
Horizontal view angle		• 170 degrees (minimum) • 178 degrees (typical)	• 170 degrees (minimum) • 178 degrees (typical)
Vertical view angle		• 170 degrees (minimum) • 178 degrees (typical)	• 170 degrees (minimum) • 178 degrees (typical)
Pixel pitch		0.2745 x 0.2745 mm	0.2745 x 0.2745 mm
Power consumption (maximum)		12.70 W	13.48 W
Anti-glare vs glossy finish		Anti-glare	Anti-glare
Adaptive sync		Not applicable	Not applicable
Stylus support		Not applicable	Capacitive touch

Table 19. Display specifications (continued)

Description	Option one (non-touch display)	Option two (touch-display)
Multi-touch feature supported	Not applicable	10-points multi-touch
Display surface	Anti-glare treatment of the front polarizer (Haze 25%, 3H)	Anti-glare treatment of the front polarizer (Haze 25%, 3H)

GPU—Integrated

The following table lists the specifications of the integrated Graphics Processing Unit (GPU) supported by your OptiPlex 7400 All-in-One.

Table 20. GPU—Integrated

Controller	Memory size	Processor
Intel UHD Graphics 730	Shared system memory	12th Generation Intel Core i3-12100, i3-12300, and i5-12400 processors
Intel UHD Graphics 770	Shared system memory	12th Generation Intel Core i5-12500/ i5-12700/i7/i9 processors

Multiple display support matrix

The following table lists the multiple display support matrix for your OptiPlex 7400 All-in-One.

Table 21. Multiple display support matrix

Description	Option 1	Option 2
Integrated Graphics Card	Intel UHD Graphics 730	Intel UHD Graphics 770
Optional Module	NA	NA
Supported 4K Displays	• On board integrated DP1.4 HBR3 (5120 x 3200 @ 60 Hz) • On board integrated HDMI 2.0 (4096 x 2160 @ 60 Hz)	• On board integrated DP1.4 HBR3 (5120 x 3200 @ 60 Hz) • On board integrated HDMI 2.0 (4096 x 2160 @ 60 Hz)
Supported 5K Displays	On board integrated DP1.4 HBR3 (5120 x 3200 @ 60 Hz)	On board integrated DP1.4 HBR3 (5120 x 3200 @ 60 Hz)

GPU—Discrete

The following table lists the specifications of the discrete Graphics Processing Unit (GPU) supported by your OptiPlex 7400 All-in-One.

Table 22. GPU—Discrete

Controller	Memory size	Memory type
AMD Radeon RX 6500M	4 GB	GDDR6

Multiple display support matrix

The following table lists the multiple display support matrix for your OptiPlex 7400 All-in-One.

Table 23. Multiple display support matrix

Graphics Card	Memory	Ports	Supported external displays with Direct Connect	Supported external displays with DP Multi-Stream	Supported 4K Displays	Supported 5K Displays	Resolution	Total Power
AMD Radeon RX 6500M	4 GB GDDR 6	HDMI OUT—HDMI 2.0 port	One HDMI 2.0 port	Not supported	Yes	Not supported	3840 x 2160 @ 60 Hz	50 W

Hardware security

The following table lists the hardware security of your OptiPlex 7400 All-in-One.

Table 24. Hardware security

Hardware security
Dell Lockable port cover (optional)
Chassis lock slot support
Noble Custom AIO Plate Lock (optional)
Supply chain tamper alerts
Chassis intrusion switch
Trusted Platform Module (Discrete TPM Enabled)
SafeBIOS including Dell Off-host BIOS Verification
BIOS Resilience
BIOS Recovery, and additional BIOS Controls
SafeID including Trusted Platform Module (TPM) 2.0
Self-Encrypting Drives (SED)
Smart card keyboard (FIPS)
D-Pedigree (Secure Supply Chain Functionality)
Dell wired mouse with fingerprinter reader

Environmental

The following table lists the environmental specifications of your OptiPlex 7400 All-in-One.

Table 25. Environmental

Feature	Values
Recyclable packaging	Yes
BFR/PVC—free chassis	No
Vertical orientation packaging support	Yes
Multi-Pack packaging	No

Table 25. Environmental (continued)

Feature	Values
Energy-Efficient Power Supply	Standard
ENV0424 compliant	Yes

NOTE: Wood-based fiber packaging contains a minimum of 35% recycled content by total weight of wood-based fiber. Packaging that contains without wood-based fiber can be claimed as Not Applicable. The anticipated required criteria for EPEAT 2018.

Regulatory compliance

The following table lists the regulatory compliance of your OptiPlex 7400 All-in-One.

Table 26. Regulatory compliance

Regulatory compliance
Product Safety, EMC and Environmental Datasheets
Dell Regulatory Compliance Home page
Dell and the Environment

Operating and storage environment

This table lists the operating and storage specifications of your OptiPlex 7400 All-in-One.

Airborne contaminant level: G1 as defined by ISA-S71.04-1985

Table 27. Computer environment

Description	Operating	Storage
Temperature range	10°C to 35°C (50°F to 95°F)	-40°C to 65°C (-40°F to 149°F)
Relative humidity (maximum)	20% to 80% (non-condensing)	5% to 95% (non-condensing)
Vibration (maximum)*	0.26 GRMS	1.37 GRMS
Shock (maximum)	110 G†	160 G†
Altitude range	-15.2 m to 3048 m (-49.87 ft to 10000 ft)	-15.2 m to 10668 m (-49.87 ft to 35000 ft)
CAUTION: Operating and storage temperature ranges may differ among components, so operating or storing the device outside these ranges may impact the performance of specific components.		

* Measured using a random vibration spectrum that simulates user environment.

† Measured using a 2 ms half-sine pulse.

Medical Equipment Resources, Ltd.

University Hospital - ED Expansion Project

Specification Coversheet

Description: **Compression Unit, Extremity Pump, Rapid Inflation**

Manufacturer: Arjo Inc ((800) 323 1245)

Vendor: Arjo Inc ((800) 323 1245)

Model: Flowtron Continuous/Sequential DVT Pump - ACS900

Alt ID: CMP-EXC

Mfr #: 526000-01

Vendor #: 526000-01

Item ID:

Continuous and Sequential DVT compression pump. Used for enhancing the circulation of blood in the legs' deep veins, reducing venous stasis, and preventing DVT formation. Delivers both uniform and sequential compression for treating Deep Vein Thrombosis (DVT). Garments are non-thermal sleeves with moisture management properties, a combination of garments can be used simultaneously including combinations of the foot, calf, and thigh. SmartSense auto garment recognition technology automatically detects the attached garments and supplies the correct pressure. One button start-up, One-button start-up, real-time pressure indicator, positive pressure start/stop button, integrated carry handle, and integrated battery.

Product and Project Item Notes

Specification:

Weight reflects empty brewing system.

Manufacturer recommends 15 amp dedicated, grounded circuit.

Requires the use of an external water filter such as Omnipure KQ8. Sold seperately.

Does not require drain. Drain hose in back of unit - water drains into pitcher.

Keurig® K150P Commercial Brewing System (Medium Office Brewer)

Ideal for offices with up to 30 employees.

Why We Recommend This Brewer

With Keurig®, it's always a fresh cup. The K150P is a fully programmable brewer with an interactive touchscreen that allows you to program the brew temperature, Auto On/Off and set your language preference to English, Spanish or French. The K150P brewer has a choice of five cup sizes (4 oz., 6 oz., 8 oz., 10 oz., 12 oz.), offers a removable drip tray to accommodate travel mugs and a drainable internal hot water tank for transport or storage.

Office Size	Ease of Use	Variety	Value
30	10/10	10/10	7/10

Mobile video remote interpretation (VRI) device. Combines the benefits of face-to-face interpretation with the on-demand nature of over-the-phone interpretation (OPI). Patients can see and hear a medically qualified interpreter in their language. Audio service offers 24/7 access to over-the-phone interpreters in more than 200 languages. Audio can be reached both over a telephone or on the Stratus Video application. With the InPerson app you can request an in-person interpreter.

Announcing the new STRATUS™ STAND

Our new and unique design offers great mobility and accessibility while affording improved visibility. With the conveniently attached stand bin you can store language identification cards, sani-wipes, and speakers, making it easier for you to find the supplies and instructions you need, right when you need them.

- ✓ extendable arm for maximum reach over patient's bed
- ✓ tiliting face for patient accessibility
- ✓ up to 72" of adjustable height to reach over bed guards
- ✓ smooth, cleanable surfaces for infectious disease control
- ✓ wheeled, sturdy base for ease of mobility

A-SMART® Standard Steel Cart Features

How to CUSTOMIZE An A-SMART® Standard Steel Cart:

1. CHOOSE FRAME SIZE & DRAWER CONFIGURATION

What kind of locking system do you need? How much drawer space do you want?

ABL Series:
Breakaway Locks

ABL-6

6 Drws. = 30" drawer space

ABL-6 = 6 Drws. with 30" dr. space *(shown above)*

ABL-4 = 4 Drws. with 24" dr. space

ABL-5 = 5 Drws. with 24" dr. space

6-Dr. ABL Cart Dim.:
Overall: 45.40"H x 25.40"D x 34.15"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 30" total drawer height.
6-Drawer: $2^{7}/_{8}$"H (4), $6^{1}/_{8}$"H (1), $12^{1}/_{2}$"H (1).
Weight: 165 lbs.

4-Dr. and 5-Dr. ABL Cart Dim.:
Overall: 38.90"H x 25.40"D x 34.25"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 24" total drawer height.
4-Drawer: $2^{7}/_{8}$"H (2), $6^{1}/_{8}$"H (1), $12^{1}/_{2}$"H (1).
5-Drawer: $2^{7}/_{8}$"H (3), $6^{1}/_{8}$"H (1), $9^{3}/_{8}$"H (1).
Weight: 145 lbs.

AKL Series:
Key Locks

AKL-6

6 Drws. = 30" drawer space

AKL-6 = 6 Drws. with 30" dr. space *(shown above)*

AKL-4 = 4 Drws. with 30" dr. space

AKL-5 = 5 Drws. with 24" dr. space

4-Dr. and 6-Dr. AKL Cart Dim.:
Overall: 45.40"H x 25.40"D x 34.15"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 30" total drawer height.
4-Drawer: $2^{7}/_{8}$"H (1), $9^{3}/_{8}$"H (3).
6-Drawer: $2^{7}/_{8}$"H (3), $6^{1}/_{8}$"H (2), $9^{3}/_{8}$"H (1).
Weight: 165 lbs.

5-Dr. AKL Cart Dim.:
Overall: 38.90"H x 25.40"D x 34.25"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 24" total drawer height.
5-Drawer: $2^{7}/_{8}$"H (3), $6^{1}/_{8}$"H (1), $9^{3}/_{8}$"H (1).
Weight: 145 lbs.

ATE Series:
Touchpad Locks w/Key Override

ATE-6

6 Drws. = 30" drawer space

ATE-6 = 6 Drws. with 30" dr. space *(shown above)*

ATE-5 = 5 Drws. with 24" dr. space

Standard Electronic Touchpad Locking Carts, page 100

6-Dr. ATE Cart Dim.:
Overall: 45.81"H x 25.23"D x 34.08"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 30" total drawer height.
6-Drawer: $2^{7}/_{8}$"H (3), $6^{1}/_{8}$"H (2), $9^{3}/_{8}$"H (1).
Weight: 165 lbs.

5-Dr. ATE Cart Dim.:
Overall: 39.31"H x 25.23"D x 34.08"W (includes bumper/handles/casters).
Drawer size: $17^{1}/_{16}$"D x $22^{1}/_{4}$"W.
Drawer configuration: 24" total drawer height.
5-Drawer: $2^{7}/_{8}$"H (3), $6^{1}/_{8}$"H (1), $9^{3}/_{8}$"H (1).
Weight: 145 lbs.

2. PICK YOUR OPTIONS

Choose your drawer fronts…
Choose from any one of our eighteen designer colors on the right. If you want the ABL-4 as shown with **Teal** drawer fronts, your cart would be ABL-**T**-4. Customer Service will gladly assist you with questions.

Four drawer sizes available:
3" **6"** **9"** **12"**
If standard drawer arrangements don't suit your needs, slides can be moved 3" up or down (additional charge per cart). Call Customer Service for details: 800/323-4220.

How do we ship our carts? *See page 75*

Flexline® Carts and Drawers

We put space to work.

Specifications

- **Cart Body:** Blow molded high density polyethylene (HDPE) body panels and top with Microban antimicrobial product protection. Top has integrated push handle. Side panels provide integrated accessory strips to allow no tool assembly of most accessories. Bins are available as locking or non-locking.
- **Cart Frame:** Epoxy coated 14 gauge, cold rolled steel
- **Locking Mechanism:** 12 gauge stainless steel bar with polycarbonate drawer mounted lock tabs. Passive security provided for drawers and left side bins (optional) with plastic security seal. Key lock mechanism provided for drawers and right side bins (optional). Electronic touchpads are optional for key lock carts.
- **Casters:** Four 5" (127 mm) diameter stem casters with polyurethane tread and polymer horn: 2 Swivel lock — Rear, 2 total lock (brake and swivel lock) — Front.
- **Wheel Base:** Built-in extended base frame provides cart stability to adequately support articulating arms and overbridge accessories.
- **Drawers:** ABS injection molded drawer body, blow molded HDPE with Microban antimicrobial drawer front, ABS and Microban antimicrobial injection molded colored drawer pull and full extension, self-closing, ball bearing drawer slides.

Inside Dimension: 16 3/4" x 20" (425 x 508 mm)

	Weight Capacity	Inside Height

Job _____

STARSYS™
DIFFICULT AIRWAY CART

Areas such as the Emergency Department have varying case loads and requirements on a daily basis. In addition, they must mobilize or reset to address dramatic changes in process and flow, as experienced in disaster response. Starsys provides ultimate flexibility to reconfigure the space at a moments notice.

— Holds Manual Jet Ventilator with Regulator
— Tube Wrap
— O_2 Tank Holder
— Enclosed Bronchoscope Holder

Storage for:
— Preparation
— Laryngoscope equipment accessories
— Endotracheal tubes and Styletes
— Supraglottic devices
— Surgical Airway devices

- **Complete Storage System** — Addresses applications facility-wide.
- **Interchangeable Components** — Provides flexibility to address changing needs.
- **Modular Design** — Provides flexibility to change layout and/or location.
- **Polymer Construction** — Maintains function and aesthetic over time.

Metro incorporates several elements in its product design to support a facility's cleaning protocols:

- Microban® antimicrobial protection helps prevent the growth of stain and odor causing bacteria on the product. Look for the "red check" symbol for this added protection.
- Advanced polymer and other proprietary finishes provide corrosion resistance
- Smooth rounded corners to allow for easier cleaning

Passive locking with plastic seals provides a level of visual security that indicates potential supply discrepancy without compromising access.

- **Saves Time** —Provides instant inventory check. Secures each drawer individually. Inventory only those drawers that have a broken seal.
- **Increases Productivity** — Removable totes reduce down time by allowing instant replenishment with pre-stocked totes.
- **Improves Ergonomics** — Drawers are easily reconfigured without tools allowing the most frequently used drawers to be relocated to the top of the cart.

Anthony
WELDED PRODUCTS, INC.®

OFTEN COPIED / NEVER EQUALED™
SINCE 1958

The ultimate in durability, these units are designed for applications where multiple **M7, M9, C, D, & E** size cylinder transport, storage or manifolding is required. Individual spacing, positive cylinder placement and weight distribution allows for easy handling on uneven or irregular surfaces. The all-welded steel construction of angle iron and steel round bar insures greater durability and strength.

4" RUBBER SWIVEL / BRAKE

All products can be ordered in Red and/or Yellow finish for certain storage compliance regulations. An additional cost will apply.

For RED finish add "R" to end of part number	*For YELLOW finish add "Y" to end of part number*

SOUND DEADENING KITS

"Makes delivering cylinders completely invisible to the ears"

Anthony has developed an exclusive sound deadening system for their multiple cylinder carts, used to distribute cylinders in and around hospitals, rest homes, convalescent homes etc. or where **QUIET** is essential.

These sound deadening kits include heavy-duty sound deadening matting & plastic bumper guards. This formula eliminates the rattling & clanging of steel & aluminum cylinders while in transport.

METRO

CLEAN DESIGN

STARSYS

Overhead cabinet shelves are removable, easy-to-clean, and are available in both solid polymer and epoxy-coated, open-wire shelf designs.

Overhead cabinets can be specified with a variety of available doors, clear or solid style, locking or non-locking.

Standard countertop choices include laminate, stainless steel, phenolic and solid surface.

Microban® antimicrobial protection inhibits the growth of stain and odor-causing bacteria on Starsys, keeping the surface areas "cleaner between cleanings."

Starsys drawer options include choice of polymer drawers or heavy-duty drawers featuring stainless steel drawer interior. Heavy-duty drawers are available in both single- and double-wide modules.

Latex FREE

Starsys mobile workcenter units can be specified with or without overhead cabinets attached. Available overhead heights include 24", 27", 30", and 36".

Overhead cabinet accessories include light fixture, cassette bins for small item storage and organization, and poly shelf dividers.

Color-coded drawer pulls are available in an array of choices to fit any system or decor.

Starsys Doors, available in multiple heights, can be specified with or without window, as well as locking and non-locking.

Additional caster options are available through Starsys configurator.com or by contacting your Metro representative.

5" (127mm) polymer total-lock casters provide a stable work station when locked and smooth rolling cart when not.

Starsys Mobile WorkCenters are built for change. They allow you to easily adapt to a changing work environment and even inspire change in your work environment.

Available Widths: Starsys Mobile WorkCenters are available in four widths; single: 24" (610mm), double: 44" (1118mm), triple: 63" (1600mm) & single-kneewell-single: 73" (1854mm).

Kneewell Options: Starsys Mobile WorkCenters configurations have several kneewell options including a keyboard tray, pencil drawer and support bracket. The triple unit has a right oriented kneewell option with a nominal opening of 42" (1067mm) and the single-kneewell-single configuration has a nominal opening of 30" (762mm).

Total Unit Height: All units with overhead storage have a total height of 82" (2083mm) (with 5" casters). Deduct 2" from unit height when specifying 3" Total-Lock casters or Leveling casters.

Working heights with Overheads: 33", 36", 39", 42" (45" height is not available with overhead storage)

Working Heights: Available working heights without overhead storage: 33", 36", 39", 42", 45" (with 5" casters). Deduct 2" (51mm) from unit height when specifying 3" Total-Lock casters or Leveling casters.

3" Total-Lock Caster: Utilize 3" total-lock plate casters for limited mobile applications or when additional storage area is required.

B3P-TL

5" Total-Lock, All-Polymer Caster: Recommended for corrosive environments. All-polymer total-lock plate caster is an economical alternative to stainless casters.

B5PC-TL

Stabilizer/Leveling Caster: Recommended for applications where benchtop equipment demands unit stability and/or a level worksurface. Engage caster foot for stability, release for mobility.

B3N-AS

Starsys Carts are built to exact customer specifications, therefore, they are non-cancelable, non-returnable.

Meal Delivery Carts

Premium Series Models MDELP and MDSLP

From heart monitors to infusion pumps to patient TVs, noise can be overwhelming. It not only disturbs patients, it can cause spikes in blood pressure, stress hormones and heart rates. It can interfere with wound healing and pain management. Not to mention the stress it causes the staff!

Reduce noise pollution in your facility with Premium Series Meal Delivery Carts from Aladdin: the carts that have "quiet" engineered in. Our Premium Series carts are designed and built to reduce noise, rattle and vibration during use.

Double-sided pocket doors have internal sound dampening material to reduce noise. Performance casters roll quietly. Polymer door bumpers and tray slide ladder plastic inserts add to the overall quiet transport of meals to patient floors.

Lightweight and durable, their modern design features an ergonomic polymer top that doubles as a workspace. With a "front-of-the-house" look, and "back-of-the-house" strength, they're available in a variety of configurations and capacities to meet your specific patient tray delivery needs.

Standard configurations:

- Single tray/shelf capacities: 14, 18, 24 or 27 trays.
- Double tray/shelf capacities: 10, 16, 20, 24, 28, 32 or 36 trays.
- Fits popular tray sizes: 14" x 18" and 15" x 20".
- 4-1/2" tray spacing.

Aladdin Premium Meal Delivery Carts include many standard features at no additional price.

Standard Features	Quiet Transport	Ease of Use
• 4-sided integrated molded polymer top rail for transporting additional items to patient floors	Designed and built to reduce noise and vibration during transport/use	Design is optimized for efficient tray delivery
• Full-perimeter, non-marking plastic bumper for full cart and wall protection	Double-sided pocket door(s) have internal sound dampening material for noise reduction	Heavy gauge stainless steel construction with durable, lightweight polymer top and bumpers
• Floor drain with plug and sloped cart floor for ease of cleaning (one per bay)	Non-marking caster tread wheels roll quietly, with a cushion ride	Performa 6" balloon casters roll easily on a variety of different floor surfaces (carpet, tile, etc.)
• Louvered side vents to assist heat dissipation and reduce condensation buildup	Polymer door bumpers and stainless steel tray slide ladders with plastic inserts add to the overall quiet transport of meals to patient floors	2 swivel casters with brakes and 2 fixed casters mean easy maneuverability and straight line steering
• 2" wide stainless steel tray slides for secure tray transport (ladder-style ledge panels)		"Wheel-ahead" casters offset configuration means easy elevator and threshold transition *(2- and 3-bay models)*
• Convenient 270° door swing for unobstructed access (middle door on 3-bay models includes 180° swing)		Round stainless steel push handle for easy handling
• Secure door latching when door(s) are open or closed		
• Easily removable tray slide ladders for easy cleaning (no tools required)		

** Note: Available options must be specified when ordering. Specifications are subject to change without notice.*

Flexline® Carts and Drawers

We put space to work.

Specifications

- **Cart Body:** Blow molded high density polyethylene (HDPE) body panels and top with Microban antimicrobial product protection. Top has integrated push handle. Side panels provide integrated accessory strips to allow no tool assembly of most accessories. Bins are available as locking or non-locking.
- **Cart Frame:** Epoxy coated 14 gauge, cold rolled steel
- **Locking Mechanism:** 12 gauge stainless steel bar with polycarbonate drawer mounted lock tabs. Passive security provided for drawers and left side bins (optional) with plastic security seal. Key lock mechanism provided for drawers and right side bins (optional). Electronic touchpads are optional for key lock carts.
- **Casters:** Four 5" (127 mm) diameter stem casters with polyurethane tread and polymer horn: 2 Swivel lock — Rear, 2 total lock (brake and swivel lock) — Front.
- **Wheel Base:** Built-in extended base frame provides cart stability to adequately support articulating arms and overbridge accessories.
- **Drawers:** ABS injection molded drawer body, blow molded HDPE with Microban antimicrobial drawer front, ABS and Microban antimicrobial injection molded colored drawer pull and full extension, self-closing, ball bearing drawer slides.

Inside Dimension: 16 3/4" x 20" (425 x 508 mm)

	Weight Capacity	Inside Height
3" (76 mm) =	15 lbs. (6.75 kg)	2.75" (70 mm)

Job _____

SUPER ADJUSTABLE™ SUPER ERECTA SHELF®
WIRE SHELVING

Super Adjustable™ Super Erecta Wire Shelving is the most advanced and innovative wire storage system available.

- **Maximum Space Utilization:** The Corner Release System encourages repositioning of shelves during initial assembly to reclaim wasted vertical space. In some cases, reclaimed vertical space will allow an extra shelving tier to be added to the storage unit resulting in a 25% increase in storage capacity!
- **Easily Assembled:** The unique Corner Release System enables quick and easy repositioning of shelves during the initial set up to accommodate different package or container sizes. “Total Assembly” is complete only after the shelves are properly spaced to maximize storage. SiteSelect™ Posts, with the double-groove visual guide feature, have circular grooves at 1" (25mm) increments and are numbered at 2" (51mm) intervals to easily identify proper shelf locations.
- **Easily Adjustable:** The unique shelf design and SiteSelect™ Posts enable “tool-free”, quick adjustment at 1" (25mm) increments along the entire height of the post.
- **Improved Rigidity:** An enhanced Corner Release System has made Super Adjustable™ the most rigid, easily adjustable shelving system ever.
- **Strong:** Super Adjustable™ shelves hold as much weight as traditional Super Erecta wire shelving. Stationary units hold a maximum of 2,000 lb. (910kg). Maximum weight capacity per shelf (48" [1219mm] or shorter = 800 lb. [364kg]; longer than 48" [1219mm] = 600 lb. [273kg])
- **Choice of Finishes:** Super Adjustable™ Super Erecta shelving is available in a variety of finishes: chrome-plated for dry storage; Metroseal 3™ with antimicrobial product protection and Type 304 stainless steel for corrosive environments.
- **Accessories:** Compatible with the entire system of Super Erecta shelves and accessories. See Catalog Sheets 10.04, 10.05, 10.06 for more information.

Dry Storage — Chrome

Corner Release System

Super Adjustable™ Advantage . . .

Easy "no tool" shelf adjustment

1" 25mm spacing minimizes dead space

Efficient use of space allows more storage levels to be added.

Storage efficiency can increase by 25% or more!

MetroTrux™

Redefining the standard in linen distribution

MetroTrux™ units are constructed of an advanced polymer material with molded contours that provide a ruggedized body to endure the toughest daily use. Its contemporary aesthetic provides elegance to fit into any décor. Its innovative design is lightweight and ergonomic and includes "Clean Design" elements featuring Microban® antimicrobial product protection and corrosion proof components for years of reliable service.

- **Aesthetic:** Sleek lines, contoured silhouette and attractive blue color, provide a distinctive appearance suitable for any professional environment.
- **Quiet and Maneuverable:** Lightweight polymer construction, ergonomic full height integrated handle, and smooth rolling sound dampening casters roll effortlessly, even over uneven surfaces.
- **Cleans Easily:** Smooth polymer surface, rounded corners, stainless steel shelves and hardware, combined with standard drain holes on the bottom of the cart, allows for easy washing and drainage.
- **Identifiable:** Proprietary routing slip clip offers a clean way to identify the truck's destination.
- **Convertible MetroTrux:** Full open front with slanted stainless steel, convertible shelving that can be positioned either horizontal or vertical to create three different truck configurations:
  1. Both horizontal — for easy transport of, and accessibility to, stored items such as folded linens.
  2. Both vertical — creates a spacious rolling bin for the collection and the transportation of bulk items.
  3. Lower vertical & Upper horizontal — creates a combination lower compartment for bulk items and upper storage shelf for traditional storage.

  Shelves in the vertical position can be flipped out and up, enabling easier access and retrieval of stored items.
- **Bulk MetroTrux:** Provides the perfect solution for storage and transport of bulky, hard to handle items. Use for transport of bulk soiled or clean laundry within a facility or from an offsite location, transport large bulky items, collect refuse or recyclables such as corrugated boxes. Can be ordered with or without gate and lid enclosures.

TXPA-CLT48S
Convertible truck

TXPA-BLK48
Bulk truck, with no enclosures

*Microban® antimicrobial protection inhibits the growth of stain and odor-causing bacteria, keeping the surface areas "cleaner between cleanings."

Metro incorporates several elements in its product design to support a facility's cleaning protocols:
- Microban® antimicrobial protection helps prevent the growth of stain and odor causing bacteria on the product.
- Advanced polymer and other proprietary finishes provide corrosion resistance
- Smooth rounded corners to allow for easier cleaning

Look for the "red check" symbol for this added protection.

MetroTrux™
Redefining the standard in linen distribution

Specifications

Body: Rotational molded polymer construction with Microban® antimicrobial product protection, includes routing slip clip, and molded in handle.
Color: Medium Blue

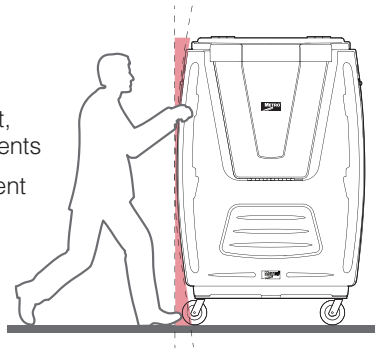
Handle: Integrated into cart, full height, with Microban® antimicrobial product protection and the following features:

— Keeps user's hands on the exterior of cart, preventing contact with soiled/clean contents

— Inset to keep user hands inboard to prevent incidental contact with surroundings

— Arched to position user to see around truck while pushing

— Curved outward to provide user more leg clearance while pushing



TXPA-BLK48SEC
Bulk truck, with enclosures

Gate and Lid: (option for bulk truck) Molded polymer construction with Microban® antimicrobial product protection, with stainless steel hinges, latch and hardware. Color: Medium Blue

Shelves: (for convertible truck) Stainless steel wire, convertible, bolted to cart body, sloped to rear of convertible truck to help contain stored items

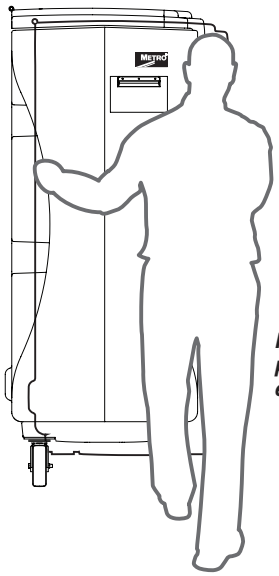
Dolly: Molded advanced polymer construction. Color: Charcoal Gray

Casters: Thermoplastic rubber (TPR) wheel with rounded tread design provides a softer, quieter ride than traditional flat faced wheels. The non-marking material also resists flat spotting and repels floor debris

— 6"D (150mm) wheel, with 2"W (50mm) rounded face

— TPR wheels and zinc plated horn; 4 swivel or 2 swivel, 2 rigid

— Double seal precision axle bearing, Double ball bearing swivel raceway with grease seal and zerk fitting



Handle design provides added ergonomics

Weight Capacity:

— Shelf: 200 lbs. (91kg)

— Truck: 600 lbs. (274kg)

SUPER ADJUSTABLE™ SUPER ERECTA SHELF®
WIRE SHELVING

Super Adjustable™ Super Erecta Wire Shelving is the most advanced and innovative wire storage system available.

- **Maximum Space Utilization:** The Corner Release System encourages repositioning of shelves during initial assembly to reclaim wasted vertical space. In some cases, reclaimed vertical space will allow an extra shelving tier to be added to the storage unit resulting in a 25% increase in storage capacity!
- **Easily Assembled:** The unique Corner Release System enables quick and easy repositioning of shelves during the initial set up to accommodate different package or container sizes. “Total Assembly” is complete only after the shelves are properly spaced to maximize storage. SiteSelect™ Posts, with the double-groove visual guide feature, have circular grooves at 1" (25mm) increments and are numbered at 2" (51mm) intervals to easily identify proper shelf locations.
- **Easily Adjustable:** The unique shelf design and SiteSelect™ Posts enable “tool-free”, quick adjustment at 1" (25mm) increments along the entire height of the post.
- **Improved Rigidity:** An enhanced Corner Release System has made Super Adjustable™ the most rigid, easily adjustable shelving system ever.
- **Strong:** Super Adjustable™ shelves hold as much weight as traditional Super Erecta wire shelving. Stationary units hold a maximum of 2,000 lb. (910kg). Maximum weight capacity per shelf (48" [1219mm] or shorter = 800 lb. [364kg]; longer than 48" [1219mm] = 600 lb. [273kg])
- **Choice of Finishes:** Super Adjustable™ Super Erecta shelving is available in a variety of finishes: chrome-plated for dry storage; Metroseal 3™ with antimicrobial product protection and Type 304 stainless steel for corrosive environments.
- **Accessories:** Compatible with the entire system of Super Erecta shelves and accessories. See Catalog Sheets 10.04, 10.05, 10.06 for more information.

Dry Storage — Chrome

NSF

Corner Release System

Super Adjustable™ Advantage . . .

Easy "no tool" shelf adjustment

1" 25mm spacing minimizes dead space

Efficient use of space allows more storage levels to be added.

Storage efficiency can increase by 25% or more!

Description

Ideal for receiving dock and store room uses, loading and moving supplies, transporting equipment and continuous hauling of heavy loads over uneven floor and outdoor surfaces. Rugged “U” shaped frame with angled stainless steel for added strength. All joints are continuous heliarc welded. Shelves are 14 gauge stainless steel with reinforced edges. Stainless steel construction resists staining and rusting. Easy to clean and sanitize, just wipe down or steam clean.

Computer Workstation cart. 20" x 16" large work surface with a monitor mount to hold an LCD display. Monitor mount has 350° rotation, 90° pan up, and 5° pan down. Powered by on-board Lithium Iron Phosphate battery power system (L500, 50V) with 500 watt/hr. battery capacity. Maximum runtime: 12.5 hours with 40W load. Features pneumatic height adjustment from 30" to 46" with 5 degree angle, front steering handle, 8" high compact base, cable management, and 5" casters - two locking. Internal PC bay: 16" x 12" x 2.6". Made of lightweight aluminum with welded steel tube construction. SilverSan embedded antimicrobial powder coat finish. Must select color. Options available: Locking drawer/key light panel, power cord, wire baskets, wipes holder, drawer system, and more.

UltraLite 500

Durable Lithium On-Board Power Series

JACO Featured Solutions:

Smart Power™ / ***TRAC™ Steering***

UltraLite 510
Laptop Locking

UltraLite 520
LED/LCD Display Mount

At JACO, our top priority is helping clinicians deliver care. Our carts are known for quality construction and effortless mobility. With JACO's patent pending ***TRAC™*** Steering system and long life Lithium Iron Phosphate batteries, UltraLite Series 500 carts deliver durable power for full-shift mobile computing at the bedside.

JACO Guarantee:

All JACO products are designed, manufactured, and supported in the United States. All mobile cart products are sold with a 5 year warranty for mechanical components and a 3 year warranty for electrical components. Limited liability terms and conditions apply.

The UltraLite 500 Series is a light, durable, and affordable powered mobile medical cart solution.

Each cart is manufactured out of light weight aircraft-grade aluminum, with a non-porous, anti-microbial powder coat surface for optimal infection control. Unique ***TRAC™* Steering** provides effortless mobility.

Base Dims: 13" x 16" x 8.5"

Offered with a wide variety of custom mounts and accessories for laptops, LCD and All-In-One options

Power Options

Long-lasting, on-board Lithium Iron battery for full-shift runtime

Ergonomic Design

Cart construction, casters, and mounting options engineered to maximize productivity and minimize physical effort, reducing operator fatigue and discomfort

Cable Management

Eliminates cord tangle and clutter with internal storage for increased nurse safety and reduced IT maintenance

Made-In-America

Designed, manufactured, assembled and serviced in the USA

UltraLite 500 Series Models

UltraLite 510

Laptop Locking

Large Work Surface
20" x 18"

Internal PC Bay
16" x 12" x 2.6"

Laptop Display Opening
16.5" x 2.75

UltraLite 520

LED/LCD Display

Large Work Surface
20" x 16" w/ Monitor Mount

Internal PC Bay
16" x 12" x 2.6"

X-Large worksurfaces also available

All specifications listed as W x L x H unless noted.

Lithium onboard power for full shift runtimes and fast recharging

Options & Accessories

Lithium Iron Battery		Choice of single or dual cell battery for 250 or 500 watt availability
***TRAC*™ Steering**		Centered "Fifth Wheel" reduces nurse fatigue by up to 40%
Barcode Scanner Holder		Options available for most models
Dual or Single Drawer Cart Storage		Flexible and secure locking medication drawers

JACO Solutions

Smart Power Charging Stations

- Ergonomic, waist-high charging
- Easy to view charge status
- Greatly reduces frayed cords and damaged outlets
- UL60601 patient proximity

Corporate Branding

Reinforce your organization's brand awareness with high quality silk-screened corporate logos and custom accent colors

R Series

Technical Specifications

Taking Resuscitation to Heart

The ZOLL® R Series® monitor/defibrillator provides clinicians with comprehensive support for resuscitation. This includes cutting-edge technology to help you meet current guidelines for achieving high-quality CPR, as well as OneStep™ electrodes that simplify and speed therapy. And to help ensure that the R Series will be Code-Ready®, it conducts an automated self-test daily.

Driving High-Quality CPR

- CPR Dashboard™ featuring Real CPR Help® — Guides rescuers with real-time audio and visual feedback on CPR quality measures. It provides numeric displays of depth and rate and visual indicators of compression release, as well as a unique Perfusion Performance Indicator™.
- See-Thru CPR® — Reduces the duration of pauses during CPR by filtering out the CPR artifact so rescuers can see whether an organized underlying rhythm has developed without stopping compressions.

Comprehensive Readiness Checks

The R Series extends testing beyond the basic test shock to checking more than 100 individual indicators of readiness, including electronics, batteries, cables, electrodes, and defibrillator discharge. A green check mark or a red X on the defibrillator indicates the status of the device, as determined during its last automated self-test. If a problem is detected, the R Series will turn on the display and an alert will be visible. When used with OneStep electrodes, even the electrodes are tested automatically every 24 hours.

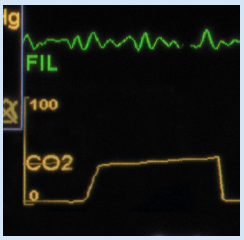
Unmatched Clinical Excellence

- Unique, constant-current 40-msec pacing has the highest capture rate at the lowest average current required, assuring efficacy and patient comfort.[1]
- Our high-current Rectilinear Biphasic™ waveform delivers the highest constant current at the optimal duration for defibrillation.
- The most extensive pediatric capabilities in an ALS defibrillator: CPR feedback coupled with a pediatric AED algorithm.

ZOLL®

General

Size: 8.2 in (20.8 cm) high x 10.5 in (26.7 cm) wide x 12.5 in (31.7 cm) deep.
Weight: 13.6 lbs (6.2 kg) with OneStep™ Cable and SurePower™ battery pack; 15.2 lbs (6.9 kg) with paddles.
Power Sources: AC Mains: 100 to 120 V AC (50/60 Hz), 220 to 240 V AC (50 Hz); Battery: Rechargeable lithium ion battery pack.
Low Battery Indicator: A "LOW BATTERY" message appears on the monitor when there are less than 15 minutes of ECG monitoring.
Design Standards: Meets or exceeds applicable requirements of UL 60601, AAMI DF80, IEC 60601-2-4, EN 60601-2-25, and 60601-2-27.
Patient Safety: All patient connections are electrically isolated.
Environmental: Operating Temperature: 0°C to 40°C; Storage and Shipping Temperature: -20°C to 60°C; Humidity: 5% to 95% relative humidity, noncondensing; Vibration: IEC 68-2-6 and IEC 68-2-34; Shock: IEC 68-2-27, 50 g 6mS half-sine; Operating Pressure: 594 to 1060 millibars; Particle and Water Ingress: IEC 529, IP22; Electromagnetic Compatibility (EMC): CISPR 11 Class B Radiated and Conducted Emissions; Electromagnetic Immunity: AAMI DF80, EN 61000-4-3 to 10 V/m; Electrostatic Discharge: AAMI DF80, EN 61000-4-2; Conducted Susceptibility: EN 61000-4-4, 61000-4-5, 61000-4-6.



Mainstream and sidestream capnography options available

Defibrillator

Waveform: Rectilinear Biphasic.™
Patient Impedance Range: 15 to 300 ohms.
Energy Selections: 1 to 10, 15, 20, 30, 50, 75, 100, 120, 150, and 200 joules selected using controls on front of the defibrillator or sternum paddles. (Note: When using appropriate pediatric resuscitation electrodes, the 75-joule setting is replaced by 70- and 85-joule settings.)
Smart Step Energy Levels: Automatically escalates energy through a configured adult or pediatric protocol.
Energy Display: Shown on monitor for both selected and delivered.
Charge Time: Less than 7 seconds with a new, fully charged battery (first 15 charges to 200 joules); longer charge times may result with a depleted or older battery.
Synchronized Mode: Synchronizes defibrillator pulse to patient's R wave. "SYNC" message displayed on monitor and markers shown on both monitor and recorded ECG.
Charge Controls: Control from front of defibrillator or apex paddle.
Paddles: External apex/sternum paddles; adult plates slide off to expose pediatric electrode surface.
Code Readiness Testing: Verifies defibrillator hardware, therapy delivery cable (with both paddles and electrodes), electrode condition and expiration (with select OneStep electrodes) without the need for a separate test fixture.

ECG Monitoring

Patient Connection: 3-lead ECG cable, 5-lead ECG cable, paddles, or hands-free electrodes; selectable by front panel switch.
Input Protection: Fully defibrillator protected. Circuits designed to prevent distortion of ECG signal by pacer pulse.
Implanted Pacemaker Spike Display: Circuits designed to detect most implanted pacemaker spikes and display a marker on the ECG trace.
Bandwidth: 0.5 to 21 Hz (-3dB) standard; 0.05 to 150 Hz diagnostic with configurable options of 0.5 Hz to 40 Hz or 1 Hz to 21 Hz.
Lead Selection: I, II, III aVR, aVL, aVF, V, P1, P2, P3 with OneStep Pacing electrode.
ECG Size: 0.5, 1.0, 1.5, 2.0 or 3.0 cm/mV display on monitor.
Heart Rate Display: 0 to 300 bpm ±5%.
Heart Rate Alarm: User selectable for tachycardia at 60 to 280 bpm; for bradycardia at 20 to 100 bpm. On/Off status displayed on the screen.

CPR Dashboard Featuring Real CPR Help

Activated when OneStep Complete, OneStep CPR, or OneStep Pediatric CPR electrodes are connected.
Detection Technology: Accelerometer.
Compression Depth: Detected between 0.75 in (1.9 cm) and 3.0 in (7.6 cm), with an accuracy of ±0.25 inches (0.6 cm).
Compression Rate: Detected between 50 and 150 compressions per minute.
Release Bar: Ensures proper release off of the chest.
Feedback: Configurable audio and visual prompts for rate and depth issued when compressions fall outside of AHA/ERC recommendations.
CPR Idle Time Display: Indicates elapsed time since last detected chest compression.
Perfusion Performance Indicator (PPI): Integrates compression depth and rate in order to rapidly visualize CPR performance per AHA/ERC recommendations.

See-Thru CPR Filter

Removes compression-related artifact from the ECG via an adaptive filtering technique.

Display

Screen Type: Color, VGA liquid crystal display (LCD).
Screen Size: 6.5 inches (16.5 cm) diagonally.
Sweep Speed: 25 mm/sec.
Viewing Time: 5 seconds with standard display format.
Channels: 3.
Information: Heart Rate, Leads/Pads, Alarm On/Off, Selected Energy, Delivered Energy, User Prompts and Warnings, Code Readiness Test Results, SpO_2, NIBP, $EtCO_2$, Pacer Functions, Code Markers, CPR Dashboard.

Battery Packs*

Type: 10.8 V (nominal) rechargeable lithium ion.
Capacity: 5.8 amp hours.
Weight: 1.7 lb (0.77 kg).
Recharge Time: 5 hours or less with integral charger.
Operating Time: >4 hours of continuous ECG monitoring; 100 maximal energy (200 joules) discharges; 3.5 hours of continuous ECG monitoring and pacing at 60 mA, 80 ppm.

Recorder

Technology: 90 mm thermal array; 80 mm grid width.
Speed: 25 mm/sec, 6-second delay.
Printing Modes: Manual or automatic.
Annotations: Time, date, defibrillation energy, patient impedance, heart rate, pacer output, QRS synchronization marker, ECG size, ECG lead, alarm, defibrillator test results, analyze ECG, ECG bandwidth.

I/O, Storage, Communications

Sync In: 0 to 5 V (TTL Level) pulse, active high, 5 to 15 ms in duration, no closer than 200 ms apart; energy transfer begins within 25 ms of the leading edge of the sync in pulse.
Marker Out: 0 to 5 V (TTL Level) pulse, active high, 10 ms in duration, the leading edge of the pulse occurs within 35 ms of R wave peak.
ECG Output: 1.0 V/cm of deflection on recorder; <25 ms delay from the patient ECG input.
Card Slot: Compact flash compatible.
Internal Memory: Disk on chip.

Advisory Defibrillation

Shock Advisory Function: Evaluates ECG rhythm to determine if shock delivery is required.
Shockable Rhythms: Ventricular fibrillation with amplitudes >100 µV, and wide-complex ventricular tachycardia with rates >150 bpm for adults or >200 bpm for pediatric applications. Refer to Operator's Manual for details on sensitivity and specificity performance.
Protocol Configurations: Configurable for either CPR or shock-first-driven protocols. Energy sequences can be configured for single or multiple shocks with fixed or escalating energy levels. The CPR interval length is configurable in 1-minute increments up to 4 minutes.

External Pacing

Type: VVI demand; asynchronous (fixed rate) when used without ECG leads or in asynchronous (ASYNC) pacing mode.
Pulse: Rectilinear, constant current: 40 ms ±2 ms; variable 0 to 140 mA ±5% or 5 mA, whichever is greater. Rate is variable from 30 to 180 ppm ±1.5%.
Output Protection: Fully defibrillator protected and isolated.
OneStep Pacing: Eliminates the need to connect separate ECG leads when used in conjunction with OneStep Pacing and OneStep Complete electrodes.

Pulse Oximetry with Masimo SET® Technology

Saturation Range: 1-100% (%SpO_2) with a resolution of 1%.
Pulse Rate Range: 25-240 ppm with a resolution of 1 ppm.
Saturation Accuracy: Non-motion conditions ±2% for adults/pediatrics; ±3% for neonates. During motion ±3% for all patients.
Pulse Rate Accuracy: Non-motion conditions ±3 ppm. During motion ±5 ppm.

Mainstream CO_2 Capnostat 5 Sensor

Principle of Operation: Nondispersive infrared (NDIR) single-beam optics, dual wavelength, no moving parts.
Warm-up Time: Full specifications within 2 minutes at an ambient temperature of 25°C. Capnogram in 20 seconds.
Environmental: Operating Temperature: 0°C to 45°C, Storage and Shipping Temperature: -40°C to 70°C.

Sidestream CO_2 LoFlo Sensor

Principle of Operation: Nondispersive infrared (NDIR) single-beam optics, dual wavelength, no moving parts.
Warm-Up Time: Full specifications within 2 minutes at an ambient temperature of 25°C. Capnogram in 20 seconds
Environmental: Operating Temperature: 0°C to 40°C, Storage and Shipping Temperature: -40°C to 70°C.

NIBP

Patient Population: Adult, Pediatric.
Method: Oscillometric.
Control: Automatic and manual measurement.

WiFi Capable

WiFi 802.11 a/b/g/n Ambicom-specific 1100C-CF Card P/N 8005-000101-01 compatibility.
Typical Readiness File: 750K.
Typical Code Data File: 1.2 MB.

*Values listed for a new battery operating at 20°C.

Continuous Renal Replacement Therapy system (CRRT). Four high-precision scales for bag handling, automatic bar-code identification of the filter set. Five pumps, including pre-blood pump for infusion of a supplemental solution for hemodilution or anticoagulation of the extracorporeal circuit. Integrated discharge ring reduces ECG interference caused by roller pumps. Price includes clinical training, annual clinical support, installation and one year warranty.

Audio and bi-directional Dopplers

The Dopplex® D900 is an entry-level, audio-only, non directional Doppler, principally used for ABI measurements by community nurses and doctors in managing leg ulcers.

- Clear audio sounds of blood flow
- Compatible with all XS high-sensitivity vascular probes
- Audio output socket
- Large carry bag

The Dopplex® SD2 provides bi-directional blood flow information to the vascular professional including the display of flow direction. It is ideal for clinical specialists wishing to conduct lower limb Doppler studies.

- Provides bi-directional blood flow information
- Compatible with all XS high-sensitivity vascular probes
- Stereo audio output socket
- Large carry bag

Use any of our handheld Dopplers with our EZ8 widebeam probe for easy location of brachial and pedal arteries

Dopplex Vascular Dopplers

Hand held Dopplers for vascular assessment and intraoperative use

Based on over 20 years of experience in the field of vascular assessment, the latest generation of Dopplex® handheld Dopplers offers even greater performance, quality and reliability.

The range now has significantly enhanced features, including improved audio performance, warranty of 5 years and new features in the *Dopplex DR4* software package.

The *EZ8* ultra wide beam probe has been designed using innovative technology to produce a distinctly wide beam, which completely encompasses the vessel of interest. This unique probe is superb for easier vessel location and helps to maintain vessel contact during cuff inflation and deflation procedures, as well as assisting in reducing variability of ABI measurements.

High Sensitivity Doppler Probes

	Order Code	Frequency	Use
	EZ8	Wide Beam 8MHz	Wide beam technology allows effortless location of vessels. Easier to maintain vessel contact during inflation and deflation
	VP4-HS	4MHz	Detection of deep lying vessels
	VP5-HS	5MHz	For edematous limbs and deep lying vessels. Ideal adjunct to re-sterilizable EZ8 for ABI measurements
	VP8-HS	8MHz	Detection of peripheral vessels and calcified arteries
	VP10-HS	10MHz	Detection of smaller superficial vessels
	IPP3-USA	8MHz	Re-sterilizable intraoperative probe. Ideal for most surgical applications
	OP2-HS	2MHz	Obstetric for fetal heart detection
	OP3-HS	3MHz	Obstetric for fetal heart detection in early gestation

*Approximate distances of peak sensitivity

ABI assessment: is recommended that the user purchase a VP5-HS or *EZ8* probe if normal and edematous limbs are to be assessed for Ankle Brachial Index (ABI) testing.

Bio Systems 2 & 3 Gallon Sharps Containers

Code # C-03RES-0203

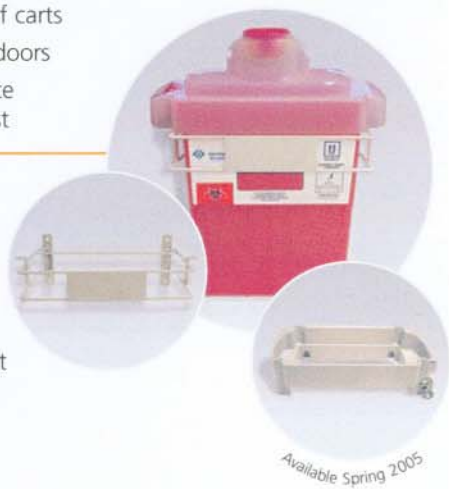
Code # C-02RES-0203

2 & 3 Gallon Sharps Containers offer our hands-free vertical drop lid along with an easy view fill line window. The containers are ideal for patient rooms, medication rooms, medication carts, soiled utility rooms and crash/code carts.

Locking Wall Cabinet
Code # C-02RES-0203-OC
Code # C-03RES-0203-OC
Code # OC-02-2004
Code # OC-03-2004

The locking cabinet allows the 2 & 3 gallon containers to be enclosed in a secure mounted unit. As a security feature the key is only removable when cabinet is in locked position. Locations suitable for the locking cabinet include:

- Patient rooms
- Exterior sides of carts
- Inside cabinet doors
- Anywhere space constraints exist



Locking Wall Bracket
Code # WB-0203
Code # 0203WMA
(Available Spring 2005)

Constructed of powder coated steel or durable plastic, the lockable bracket is ideal for mounting the 2 & 3 gallon containers to:

- Patient rooms
- Exterior sides of carts
- Inside cabinet doors
- Where space constraints exist

Available Spring 2005

Countertop Stability Base
Code # 0203SB

When wall space is limited, this durable plastic base holds both the 2 & 3 gallon containers for use on a stable surface, such as a patient counter or workstation. Base can be mounted permanently to a surface or semi-permanently with adhesive strip.

Available Spring 2005

Container Securement Cap
When the container is removed, the cap is used to secure the container for transport.

***Bio Systems Sharps Management Program** is Stericycle's proactive sharps management service with reusable containers for hospitals and other generators of sharps waste. It is an integrated, turnkey service program from procurement to disposal. The key element is our team of fully-trained, full-time Bio Systems technicians who visit your facility on a regular schedule to exchange sharps containers before they get full. Additionally, all containers are scanned, tracked and documented by our proprietary BioTrack computerized system to verify disposal and regulatory compliance.*

J-Fill® QuattroSelect®

Dispensing System

The J-Fill® platform is a close-looped system which virtually eliminates contact with chemical concentrates. This wall mounted system dispenses four different J-Fill® products into bottles, buckets and floor care machines.

Features & Benefits

- Rugged steel doors with lockable cabinet doors (comes with keys) and product identification windows. Drip tray with drain hose and a remote high flow bucket / auto scrubber fill gun
- Built with one handed 1.5 GPM low flow and low foam bottle fill
- 8' 3.1 GPM high flow bucket fill hose with easy to use point of use activation
- Smartvalve™/MC technology automatically chooses correct flow rate in one operation
- SafeGap™/MC and Air Gap eductors meets ASSE 1055B standard for back flow prevention*
- Uses super-concentrated and hyper-concentrated chemicals, reduces "in-use" cost and solid waste disposal. Spill-Tite™/MC cartridges are leak proof and virtually eliminates chemical exposure, tampering and manually diluting products

Applications

- Wall mounted four product chemical dispenser
- For filling bottles, buckets, or floor care machines
- For use in schools, office buildings, foodservice, hospitality, industrial, retail stores and health care facilities

J-Fill® QuattroSelect®

Dispensing System

Description of Features

QuattroSelect Dispensing System allows you to choose from four different products with the turn of a dial. Simply select the product you desire, choose one handed low flow bottle fill or point of use bucket activation and dispense ready-to-use solutions into spray bottles, buckets and automatic scrubbers. The lockable cabinet helps eliminate unwanted cartridge removal.

* Check local plumbing regulations for proper installation and back flow protection requirements

Technical data	J-Fill® QuattroSelect®
Unit Dimensions	24.25" x 18.5" x 7.5" (62 cm x 47 cm x 19 cm)

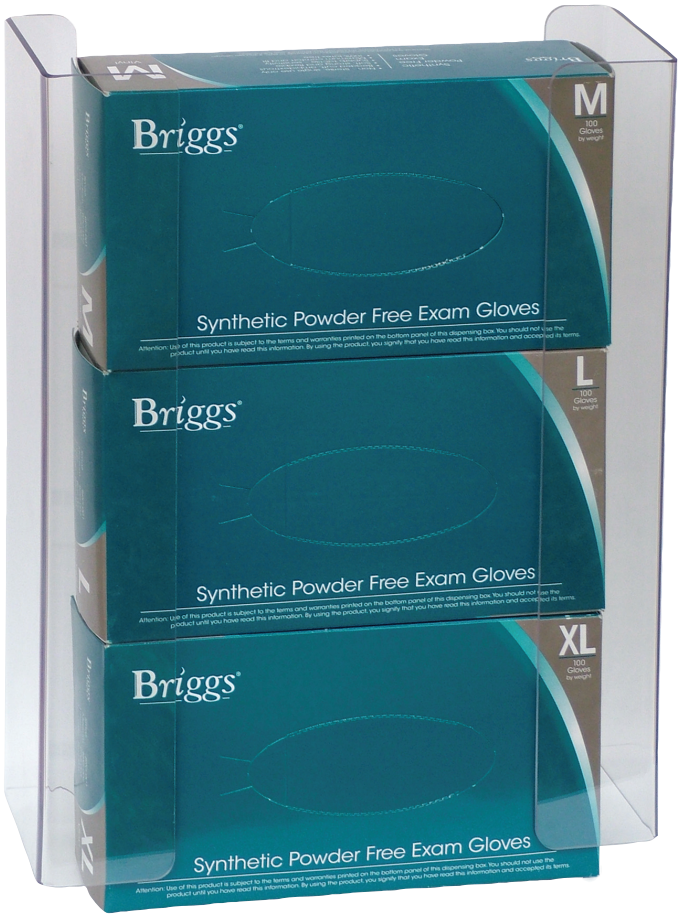
Glove Box Holder

Improve business efficiency • Improve employee workplace safety • Improve patient care & management



Clear PETG Glove Box Holder - Triple - #305362

Omnimed plastic glove box holders are made of ECO friendly PETG plastic that is both durable and easy to clean. These holders will withstand years of use and still look new. They are ideal for use in medical, lab and food prep functions or any area where cross contamination up to three different glove sizes to meet staff needs. These holders are simple to load and can be mounted vertically or horizontally on a variety of surfaces. All glove boxes fit this model. This model includes a limited 1 year warranty.

- ECO friendly PETG plastic
- Easy to clean, load and mount
- Vertical or horizontal holder for three glove boxes
- measures 15 1/2"H by 11 1/4"W by 3 3/4"D
- Recyclable material
- 1 Year Warranty

Pyxis MedStation 4000 auxiliary cabinets

Seven-drawer cabinet

Pyxis MedStation 4000 system-seven-drawer auxiliary cabinets are fabricated from 18-guage sheet metal. Each cabinet structure consists of a top panel, bottom panel, right panel, left panel, and middle shelf. A removable, locking rear panel covers the back of the cabinet. Each seven-drawer auxiliary cabinet includes a plastic top cover that fastens to the cabinet structural top panel.

All seven-drawer auxiliary cabinets have two drawer slide brackets for each cabinet drawer position. A drawer release lever at the rear of each bracket allows removal of an entire drawer from the front of the cabinet. The cabinet locking rear panel must be removed to access these release levers.

Each Pyxis MedStation 4000 system seven-drawer auxiliary cabinet includes casters that allow the cabinet to be easily moved and levelers for leveling the cabinet on an uneven floor. For Pyxis MedStation 4000 system seven-drawer auxiliary cabinet specifications, see *Seven-drawer auxiliary cabinet* on page *10*.

Double-column eight-door and single-column four-door cabinets

Pyxis MedStation 4000 system four- and eight-door tower auxiliary cabinets are fabricated primarily from 18-guage sheet metal. The cabinets have four or eight doors respectively that are fabricated primarily from latex-free, clear Lexan.

Cabinet door latches are unlocked by way of the Pyxis MedStation 4000 system application. Adjacent pairs of doors at the top and bottom halves of the cabinets can be coupled together, with each set of coupled doors functioning as one Pyxis MedStation 4000 system device. Each door secures a cabinet storage shelf area with configurable wire shelves. A manual door latch release is located under a locking top grill at the top front of each cabinet.

The top of each cabinet houses an AC power panel with a cabinet light switch. The interior of each cabinet is illuminated by a fluorescent bulb that provides light through diffusing panels inside the cabinet. The light is accessible through a center back panel on each cabinet.

Each of these auxiliary cabinets includes casters which allow the cabinet to be moved and levelers for leveling the cabinet on an uneven floor. Lower the casters to keep the cabinet from moving.

For Pyxis MedStation 4000 system eight- and four-door auxiliary cabinet specifications, see *Double-column, single-column, and half-height tower auxiliary cabinets* on page *11*.

Half-height tower cabinet

Each Pyxis MedStation 4000 system half-height tower auxiliary cabinet is fabricated primarily from 18-guage sheet metal. Each cabinet has two doors fabricated primarily from latex-free, clear Lexan.

The door latches are unlocked by using the Pyxis MedStation 4000 system application. The doors secure cabinet storage shelf areas with configurable wire shelves. A manual door latch release is located under a locking grill at the top left side of the cabinet.

Each of these auxiliary cabinets includes casters which allow the cabinet to be moved and levelers for leveling the cabinet on an uneven floor. Lower the casters to keep the cabinet from moving.

For Pyxis MedStation 4000 system half-height tower cabinet specifications, see *Double-column, single-column, and half-height tower auxiliary cabinets* on page *11*.

Pyxis MedStation 4000 system auxiliary cabinet specifications

Seven-drawer auxiliary cabinet

The following table provides specifications for Pyxis MedStation 4000 system seven-drawer auxiliary cabinets.

Graphic	Equipment	Imperial dimensions	Metric dimensions	BTUs	Steady power (Watts)	Peak power (Watts)
	Seven-drawer	27" (L) 23" (W) 47" (H)	68.6 cm (L) 58.4 cm (W) 119.4 cm (H)	N/A	N/A	N/A

Additional cabinet components

The following table provides information about additional Pyxis MedStation 4000 system cabinet components.

Graphic	Equipment	Description
	Locking rear panel • Main cabinet, six-drawer • Main cabinet, two-drawer • Auxiliary cabinet, seven-drawer	Secures access to drawer manual release levers.
	Locking top grill • Auxiliary cabinet, double-column, eight-door • Auxiliary cabinet, single-column, four-door	Secures access to door manual release lever.
	Locking top grill • Auxiliary cabinet, half-height tower	Secures access to door manual release lever.
	Casters and levelers • Main cabinet, six-drawer • Auxiliary cabinet, seven-drawer	Casters—make cabinet mobile. Levelers—adjust to level cabinet.
	Casters and levelers • Auxiliary cabinet, double-column, eight-door • Auxiliary cabinet, single-column, four-door • Auxiliary cabinet, half-height tower	Casters—make cabinet mobile. Levelers—adjust to level cabinet.
	Levelers • Main cabinet, two-drawer • Main cabinet, zero-drawer	Adjust to level main unit.

Weight specifications

The following table provides weight specifications for Pyxis MedStation 4000 system components.

Equipment	Imperial weight	Metric weight
Drawer main cabinet (without drawers, unless specified)		
Six-drawer	165.5 lb	75.1 kg
Four-drawer +bin	165.5 lb	75.1 kg
Two-drawer	100.7 lb	45.7 kg
Zero-drawer	48.0 lb	21.8 kg
Integrated main cabinet		
Single column	350 lb	159.1 kg
Double column	750 lb	340.9 kg
Auxiliary (without drawers, unless specified)		
Seven-drawer	133 lb	60.3 kg
Two-drawer	100.7 lb	45.7 kg
Double-column eight-door	470.5 lb	213.4 kg
Single-column four-door	314 lb	142.4 kg
Half-height tower auxiliary	260 lb	118.0kg
Pyxis MedStation 4000 system consoles		
Pyxis MedStation 4000 system console (including consoel rack and workstation)	154.4 lb	70 kg
Pyxis MedStation 4000 system workstation (including Dell OptiPlex tower, monitor, keyboard, and mouse)	26.4 lb	12 kg
Pyxis MedStation 4000 system console rack	128 lb	58.1 kg
Drawers/pockets		
Matrix drawer	26 lb	11.6 kg
Matrix drawer (return bin)	30 lb	13.6 kg
Half-Height CUBIE drawer set (no pockets)	52.2 lb	23.7 kg
Half-Height CUBIE drawer set (with pockets)	63 lb	28.6 kg
Half-Height CUBIE Pocket 1x 1	0.2 oz	0.1 kg
Half-Height CUBIE Pocket 1x 2	0.3 oz	0.1 kg
Half-Height CUBIE Pocket 1x 3	0.5 oz	0.2 kg
Full-Height CUBIE drawer (no pockets)	38.6 lb	17.5 kg
Full-Height CUBIE pocket 1X	5.4 oz	.15 kg

Pyxis MedStation 4000 main cabinets

There are two types of system main cabinets:

- Pyxis MedStation 4000 system drawer main cabinet—see *Pyxis MedStation 4000 system drawer main cabinet* below.
- Pyxis MedStation 4000 Integrated Main cabinet—see *Pyxis MedStation 4000 Integrated Main cabinet specifications* on page *7*.

Pyxis MedStation 4000 system drawer main cabinet

Each Pyxis MedStation 4000 drawer main cabinet (shown here) includes an electronics drawer (E-drawer) assembly that fastens to the cabinet structural top panel, and a top cover assembly that is hinged to the rear of the E-drawer. The top cover assembly locks to the E-drawer in the closed position and is supported by two struts in the open position.

The E-drawer assembly includes the following main components:

- Computer motherboard
- Peripheral circuit boards
- Hard drive
- DC power supply
- Backup battery

The top cover assembly includes the following main components:

- Monitor/touchscreen assembly
- Keyboard
- Thermal printer
- BioID fingerprint identification system
- 2D barcode scanner with hands-free mounting bracket

Pyxis MedStation 4000 drawer main cabinets are fabricated from 18-guage sheet metal. Each cabinet structure consists of a top panel, bottom panel, right panel, left panel, and middle shelf. A removable, locking rear panel covers the back of the cabinet.

Each Pyxis MedStation 4000 drawer main cabinet and seven-drawer auxiliary cabinet includes casters that allow the cabinet to be easily moved and levelers for leveling the cabinet on an uneven floor.

All cabinets (with the exception of the zero-drawer main cabinet) have two drawer slide brackets for each cabinet drawer position. A drawer release lever at the rear of each bracket allows removal of an entire

Weight specifications

The following table provides weight specifications for Pyxis MedStation 4000 system components.

Equipment	Imperial weight	Metric weight
Drawer main cabinet (without drawers, unless specified)		
Six-drawer	165.5 lb	75.1 kg
Four-drawer +bin	165.5 lb	75.1 kg
Two-drawer	100.7 lb	45.7 kg
Zero-drawer	48.0 lb	21.8 kg
Integrated main cabinet		
Single column	350 lb	159.1 kg
Double column	750 lb	340.9 kg
Auxiliary (without drawers, unless specified)		
Seven-drawer	133 lb	60.3 kg
Two-drawer	100.7 lb	45.7 kg
Double-column eight-door	470.5 lb	213.4 kg
Single-column four-door	314 lb	142.4 kg
Half-height tower auxiliary	260 lb	118.0kg
Pyxis MedStation 4000 system consoles		
Pyxis MedStation 4000 system console (including consoel rack and workstation)	154.4 lb	70 kg
Pyxis MedStation 4000 system workstation (including Dell OptiPlex tower, monitor, keyboard, and mouse)	26.4 lb	12 kg
Pyxis MedStation 4000 system console rack	128 lb	58.1 kg
Drawers/pockets		
Matrix drawer	26 lb	11.6 kg
Matrix drawer (return bin)	30 lb	13.6 kg
Half-Height CUBIE drawer set (no pockets)	52.2 lb	23.7 kg
Half-Height CUBIE drawer set (with pockets)	63 lb	28.6 kg
Half-Height CUBIE Pocket 1x 1	0.2 oz	0.1 kg
Half-Height CUBIE Pocket 1x 2	0.3 oz	0.1 kg
Half-Height CUBIE Pocket 1x 3	0.5 oz	0.2 kg
Full-Height CUBIE drawer (no pockets)	38.6 lb	17.5 kg
Full-Height CUBIE pocket 1X	5.4 oz	.15 kg

CPU and power specifications

The following table provides CPU and power specifications for Pyxis MedStation 4000 system components.

Description	Equipment	Specification
AC power (line Voltage)	Main (6, 4, 2, 0)	100-240V, 50–60 Hz
	Column	100-240V, 50–60 Hz
Load current (Amps)	Main (6, 4, 2, 0)	1 Amp NOM, 3 Amp MAX
	Column	1 Amp NOM, 3 Amp MAX
Circuit breakers	All	One for the system
Heat evolved	Main	2-, 4- and 6-drawer Main approx. 409 BTU/hr.
	Aux	Add 21 BTU for each auxiliary.
	Column	Add 21 BTU for each auxiliary.
Battery	Main	Five-year life span
Console server	AC Input	100-240V, 50–60 Hz
	Power Supply	Second power supply for redundancy
	Output Power	600 Watts MAX
Console server	Power Management	ACPI 1.0, APM 1.2 Compliant
	AC Input	100-240V, 50–60 Hz
	Output Power	250 Watts MAX

Lock loop systems

In addition to the cabinet keyed locks, lock loop systems provide an additional level of cabinet security by allowing customers to install their own padlocks on cabinets.

The lock loops on newer cabinets include rear panel lock hasps, to which the customer can install padlocks. Lock loop kits are orderable for installing lock hasps on older cabinets.

Recommended lock loop system procedures

CareFusion recommends the following security procedures for lock loop systems installed on Pyxis MedStation 4000 system equipment:

1. Install two padlocks per Pyxis MedStation 4000 system cabinet, if double-lock-and-key requirements exist.
2. Ensure that each padlock is keyed differently and labeled as "Lock A" and "Lock B."
3. Ensure that all "A" and "B" type padlocks, respectively, are keyed the same throughout the customer site.
4. Develop a secure key control system for both standard Pyxis keys and hospital-owned padlock keys.
5. Restrict access to Pyxis keys and padlock keys to hospital employees only.

Seismic anchoring

In California, certain equipment cabinets must be seismically anchored according to California Building Code Section 1632A. Installation of these anchoring devices is the responsibility of the customer and requires the use of power tools and the careful positioning of heavy objects. It is recommended that these installations be accomplished by a licensed contractor or other hospital-approved, qualified individuals. CareFusion Corporation shall not be liable for damage to equipment or personnel during the installation of these devices. For more information, including seismic anchor kit part numbers, see the *CareFusion Seismic Anchor Kits Install Guide*.

The following Pyxis MedStation 4000 system cabinets require seismic anchoring:

- Pyxis MedStation 4000 system six-drawer main cabinet
- Pyxis MedStation 4000 Integrated Main three and seven door cabinets
- Seven-drawer auxiliary cabinet
- Double-column 8-door auxiliary cabinet
- Single-column 4-door auxiliary cabinet
- Console rack

Product and Project Item Notes

Specification:

Mounts on refrigerator door (refrigerator not included).
Ensure that overall width required includes space for unit to attach to the refrigerator.

Connects to Pyxis Main dispenser for power.

If undercounter refrigerator located in casework, provide grommet. Or, electrical can be installed in wall at each location and remote manager and medication dispenser can be tied together.

Requires 4" clearance on non-hinge side of refrigerator.

Pyxis Remote Manager and Pyxis SMART Remote Manager

For Pyxis Remote Manager and Pyxis SMART Remoted Manager specifications, see *Pyxis Remote Manager and Pyxis SMART Remote Manager specifications* on page *27*.

Pyxis Remote Manager

Pyxis Remote Manager is an automated medication management system for temperature-sensitive medication. It provides controlled point-of-use access, electronically tracks and records transaction data, and generates reports necessary for inventory management, billing, and regulatory compliance. Pyxis Remote Manager includes an electronic locking latch that can be installed on many commercially available refrigerators or warmers.

Pyxis SMART Remote Manager

The Pyxis Secure Monitor Alarm Record Temperature (SMART) Remote Manager is an automated medication management system for temperature-sensitive medication dispensing and for storage device temperature management. Pyxis SMART Remote Manager provides controlled access, monitors internal storage temperatures of refrigerators or warming devices, provides a warning when temperatures fall outside of user-defined limits, electronically archives transaction and temperature data, and generates reports necessary for regulatory compliance, inventory management, and billing. Like Pyxis Remote Manager, Pyxis SMART Remote Manager includes an electronic locking latch that can be installed on many commercially available refrigerators or warmers. Pyxis SMART Remote Manager also includes a digital temperature readout on top of the unit.

Pyxis SMART Remote Manager units are available for refrigerator doors that open from either the left or from the right.

Pyxis Remote Manager and Pyxis SMART Remote Manager specifications

The following table provides specifications for Pyxis Remote Manager and Pyxis SMART Remote Manager units.

CAUTION

Do not position a Pyxis Remote Manager or Pyxis SMART Remote Manager refrigerator on top of a Pyxis MedStation 4000 system auxiliary cabinet. Doing so can exceed the load limit of the cabinet. For more information, see the *Pyxis MedStation® System Safety Manual*.

Pyxis MedStation ES system specifications

The introduction of the Pyxis MedStation system in 1989 revolutionized the way health care facilities manage their medication distribution process. Pyxis MedStation is the most widely used point-of-use automated medication dispensing system in the world today. The system brings value to a facility by supporting its efforts to reduce chances of medication errors, enhance quality of care, maintain compliance with regulatory and Joint Commission requirements, control costs, and increase revenue.

The Pyxis MedStation ES system is the newest generation of the Pyxis MedStation system product legacy. It builds upon our industry-leading technology and advances new medication safety, workflow, security, operational, and IT functionality.

The Pyxis MedStation ES system is a cabinet-based storage system used by hospitals and similar institutions to store and safeguard medications and floor stock items. Using a computer in the Pyxis MedStation ES system main cabinet, users can unlock and open drawers in the cabinets and access the contents of the medications stored in the cabinets.

A single configuration of Pyxis MedStation ES system cabinets is called a station. A station consists of a main cabinet, or a main cabinet and one or more auxiliary cabinets. A facility can have one Pyxis MedStation ES system or several Pyxis MedStation ES systems connected together in a network.

Using the Pyxis MedStation ES system, a pharmacy can store and track a range of medications and floor-stock items. Depending on your needs, the Pyxis MedStation ES system can manage:

- Narcotics
- Floor stock
- Pro re natas (PRNs) (profile mode recommended)
- First doses (profile mode recommended)
- Some IV solutions and sets
- Up to 95% of all medications (profile mode only)

The actual amount of medication storage depends on your station configurations and other factors. The Pyxis MedStation ES system is flexible and has many configuration options to accommodate customer needs and requirements.

Pyxis MedStation ES system auxiliary cabinets

Seven-drawer cabinet

Pyxis MedStation ES system-seven-drawer auxiliary cabinets are fabricated from 18-gauge sheet metal. Each cabinet structure consists of a top panel, bottom panel, right panel, left panel, and middle shelf. A removable, locking rear panel covers the back of the cabinet. Each seven-drawer auxiliary cabinet includes a plastic top cover that fastens to the cabinet structural top panel.

All seven-drawer auxiliary cabinets have two drawer slide brackets for each cabinet drawer position. A drawer release lever at the rear of each bracket allows removal of an entire drawer from the front of the cabinet. The cabinet locking rear panel must be removed to access these release levers.

Each Pyxis MedStation ES system seven-drawer auxiliary cabinet includes casters that allow the cabinet to be easily moved and levelers for leveling the cabinet on an uneven floor. For Pyxis MedStation ES system seven-drawer auxiliary cabinet specifications, see *Seven-drawer auxiliary cabinet* on page *12*.

Double-column eight-door and single-column four-door cabinets

Pyxis MedStation ES system eight-door and four-door tower auxiliary cabinets are fabricated primarily from 18-gauge sheet metal. The cabinets have four or eight doors respectively that are fabricated primarily from clear acrylic. Cabinets with solid, 16-gauge steel doors are also available.

Cabinet door latches are unlocked using the Pyxis MedStation ES system application. Adjacent pairs of doors at the top and bottom halves of the cabinets can be coupled together, with each set of coupled doors functioning as one Pyxis MedStation ES system device. Each door secures a cabinet storage shelf area with configurable wire shelves. A manual door latch release is located under a locking top grill at the top front of each cabinet.

The top of each cabinet houses an AC power panel with a cabinet light switch. The interior of each cabinet is illuminated by a fluorescent bulb that provides light through diffusing panels inside the cabinet. The light is accessible through a center back panel on each cabinet.

Each of these auxiliary cabinets includes casters, which allow the cabinet to be moved, and levelers for leveling the cabinet on an uneven floor. Lower the levelers to keep the cabinet from moving.

For Pyxis MedStation ES system eight-door and four-door auxiliary cabinet specifications, see *Double-column, single-column, and half-height tower auxiliary cabinets* on page *14*.

Double-column, single-column, and half-height tower auxiliary cabinets

The following table provides specifications for Pyxis MedStation ES system double-column, single-column, and half-height tower auxiliary cabinets.

Photo	Equipment	Imperial dimensions	Metric dimensions	BTUs	Steady power (Watts)	Peak power (Watts)
	Double-column, eight-door	27.5" (L) 51.8" (W) 78.9" (H)	69.9 cm (L) 131.6 cm (W) 200.4 cm (H)	222	65	65
	Single-column, four-door	27.5" (L) 29.7" (W) 78.9" (H)	69.9 cm (L) 75.4 cm (W) 200.4 cm (H)	222	65	65
	Half-height tower	27.5" (L) 29.7” (W) 42.6” (H)	69.9 cm (L) 75.4 cm (W) 108.2 cm (H)	N/A	N/A	N/A

Additional cabinet components

The following table provides information about additional Pyxis MedStation ES system cabinet components.

Photo	Equipment	Description
	Locking rear panel • Main cabinet, six-drawer • Main cabinet, two-drawer • Auxiliary cabinet, seven-drawer	Secures access to drawer manual release levers.
	Locking top grill • Auxiliary cabinet, double-column, eight-door • Auxiliary cabinet, single-column, four-door	Secures access to door manual release lever.
	Locking top grill • Auxiliary cabinet, half-height tower	Secures access to door manual release lever.
	Casters and levelers • Main cabinet, six-drawer • Auxiliary cabinet, seven-drawer	Casters—make cabinet mobile. Levelers—adjust to level cabinet.
	Casters and levelers • Auxiliary cabinet, double-column, eight-door • Auxiliary cabinet, single-column, four-door • Auxiliary cabinet, half-height tower	Casters—make cabinet mobile. Levelers—adjust to level cabinet.
	Levelers • Main cabinet, two-drawer • Main cabinet, zero-drawer	Adjust to level main unit.

Weight specifications

The following table provides approximate weight specifications for Pyxis MedStation ES system components.

Equipment	Imperial weight	Metric weight
Main cabinet (without drawers, unless specified)		
Six-drawer	165.5 lb	75.1 kg
Four-drawer bin	165.5 lb	75.1 kg
Two-drawer	100.7 lb	45.7 kg
Zero-drawer	48.0 lb	21.8 kg
Auxiliary (without drawers, unless specified)		
Seven-drawer	133 lb	60.3 kg
Two-drawer	100.7 lb	45.7 kg
Double-column eight-door	470.5 lb	213.4 kg
Single-column four-door	314 lb	142.4 kg
Half-height tower auxiliary	260 lb	118.0 kg
Pyxis MedStation ES system consoles		
Dell PowerEdge T310 tower server	51.8 lb	23.5 kg
Dell PowerEdge T410 tower server	62.6 lb	28.4 kg
Dell PowerEdge R310 rack server	35.0 lb	15.9 kg
Dell PowerEdge R410 rack server	35.0 lb	15.9 kg
Drawers/pockets		
Matrix drawer	26 lb	11.6 kg
Matrix drawer (return bin)	30 lb	13.6 kg
CUBIE drawer set (no pockets)	52.2 lb	23.7 kg
CUBIE drawer set (with pockets)	63 lb	28.6 kg
CUBIE Pocket 1x1	2.6 oz	0.07 kg
CUBIE Pocket 1x2	4.7 oz	0.13 kg
CUBIE Pocket 1x3	7.9 oz	0.22 kg
Full-height CUBIE drawer (no pockets)	38.6 lb	17.5 kg
Full-height CUBIE pocket 1X	5.4 oz	.15 kg
Full-height CUBIE pocket 2X	9.0 oz	.26 kg
Full-height CUBIE pocket 3X	12.2 oz	.35 kg
Full-height CUBIE pocket 5X	19.7 oz	.56 kg

Cabinet security features

Main cabinets, seven-drawer auxiliary cabinets

Keyed rear panel locks

The cabinet's removable rear panel is secured to the cabinet with two tubular keyed locks that are keyed differently. These locks are located on the top left and right sides of the rear panel. Customers retain control of the keys to these locks at all times, and CareFusion field personnel are prohibited from having these keys in their possession.

The bottom of the rear panel is retained with two sheet metal tabs that insert into holes in the bottom of the cabinet. If the locked rear panel is pried off of the cabinet, substantial visible structural damage will be evident.

Cabinet security anchor cable

A one-inch hole located at the bottom rear of each cabinet allows the attachment of a cabinet security anchor cable that prevents removal of the entire cabinet.

Additional security features

If the locked cabinet rear panel is removed and a drawer is removed by manually pivoting the drawer latch arm, a speaker in the Pyxis MedStation ES system E-drawer will sounds an alarm, and an illegal access message is logged in the system for the drawer. This message contains the drawer number, and the date and time of access.

If a Pyxis MedStation ES system main cabinet is unplugged from its wall power outlet, the station goes into backup power mode and continue running on the 12-Volt backup battery in the main cabinet E-drawer. A message is logged into the system indicating that power was lost at the station at the date and time of the incident. Any unsaved data is saved, and the station then shuts down.

Double-column eight-door and single-column four-door auxiliary cabinets

Each Pyxis MedStation ES system eight-door and four-door tower auxiliary cabinet includes a top grill with two tubular locks that are keyed differently. Customers retain control of the keys to these locks at all times, and CareFusion field personnel are prohibited from having these keys in their possession.

Unlocking and opening the cabinet top grill provides access to the cabinet manual door latch release.

CPU and power specifications

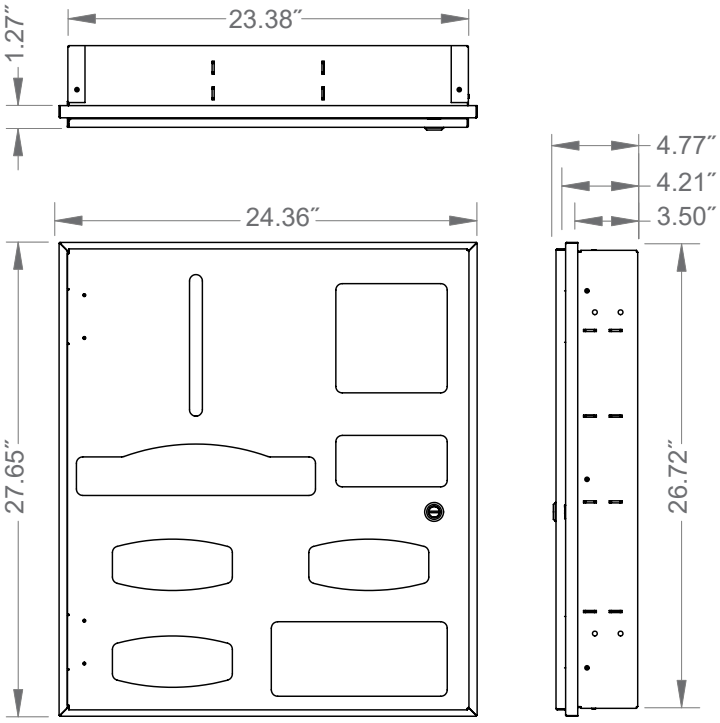
RE101-0012
Semi-Recessed PPE Dispensing System

Mounting Specifications:

- Installation should be performed only by a licensed contractor.



Product Description:

- Semi-Recessed PPE Dispensing System
- Holds a variety of gowns, three boxes of gloves, one box of earloop-style face masks, one box of shield-style face masks, and built-in storage area (for a variety of medical supplies, fourth box of gloves, or one box of N-95 face masks)
- Low profile
- Slotted keyless cam lock (one key included, extras sold separately)
- Screw holes in sides to mount to stud framing in wall
- Made of Quartz Beige Powder-Coated Steel

Primary Area for Product Usage:

- All patient care areas requiring personal protective equipment and isolation supplies

Dispenses:

- Top left section: Gowns (up to 15 flat pack, 15 launderable, or 2 blue boxes) folded up to 14.94″W x 14.50″H x 4.06″D (37.8 cm x 36.8 cm x 10.9 cm)
- Top right section: One box shield-style face masks up to 8.38″W x 9.50″H x 4.06″D (21.1 cm x 23.9 cm x 10.4 cm)
- Middle right section: One box earloop-style face masks up to 8.38″W x 4.75″H x 4.06″D (20.6 cm x 12.2 cm x 10.4 cm)
- Two top glove sections: Two boxes of gloves up to 11.63″W x 6.25″H x 4.06″D (29.5 cm x 15.9 cm x 10.4 cm)
- Two bottom sections: Two boxes of gloves up to 11.63″W x 5.50″H x 4.06″D (29.5 cm x 14.0 cm x 10.4 cm), or one box of gloves and miscellaneous medical supplies in bottom right

Package Specifications:

- Package Quantity: 1 per case
- 27″L x 8″W x 32″H (68.6 cm x 20.3 cm x 81.3 cm)
- 26.0 lbs (11.8 kg) - approximated

Product Specifications (overall external dimensions):

- 24.36″W x 27.65″H x 4.77″D (61.9 cm x 70.2 cm x 12.1 cm)
- 22.4 lbs (10.1 kg) - approximated

Accessories (each sold separately):

- MP-047: Clip-On Sign Holder (shown attached below)
- REK01-0320: Recessed Key

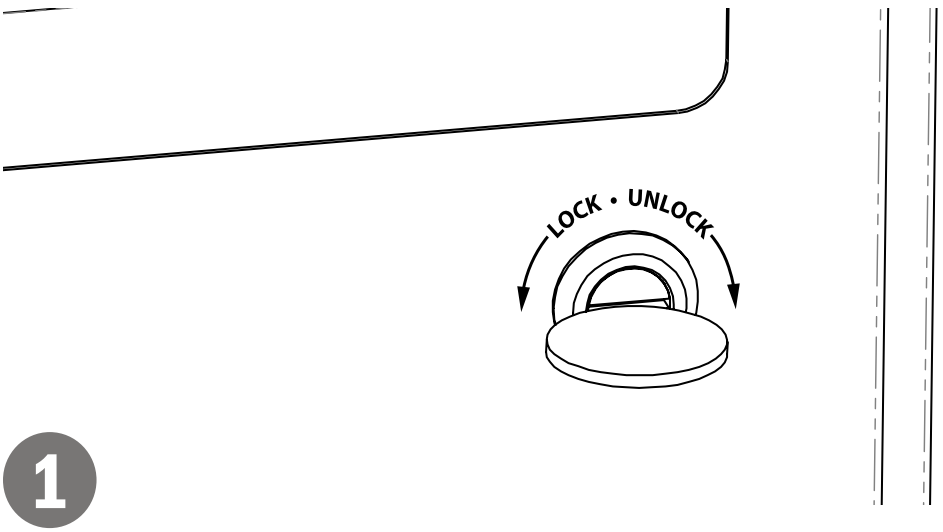
Installation Instructions/Characteristics & Care

Installation

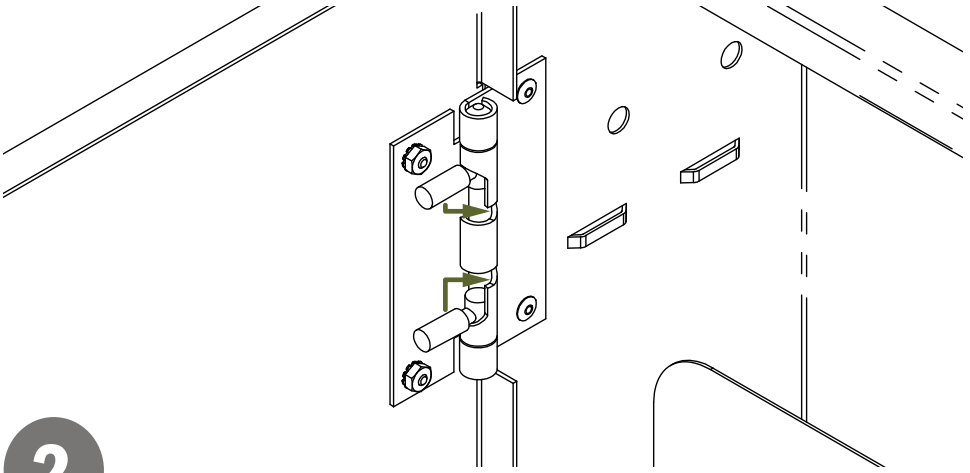
Always mount dispensers securely *prior* to loading with product.

- Door can be locked or unlocked using a small flat object, such as a coin, or similar rounded edge.



1

- Door can be removed by squeezing and turning posts on hinges as shown.



2

Parts included:

- Dispenser

Tools Required:

- No tools required to assemble dispenser

Characteristics & Care

Powder-Coated Steel

Material Characteristics

Designed for Long-Term Use

Our steel dispensers and stands are coated with polyester powders which makes them highly resistant to corrosion.

Powder-coated steel is ideal for dispensers used in a healthcare or an industrial setting because it is impact resistant and is not effected by extremes in temperature.

Dispensers and stands made of powder-coated steel are both attractive and functional, providing years of service.

Care and Cleaning

For best results, clean by washing the surface with a diluted solution of a mild, non-abrasive detergent in cold or warm water and a non-abrasive cloth. Standard hospital cleaning supplies can be used.

Dry with a soft cloth. Do not use any solvent-based materials, abrasives (e.g. Scotch-brite, steel wool), or apply excessive force during cleaning.

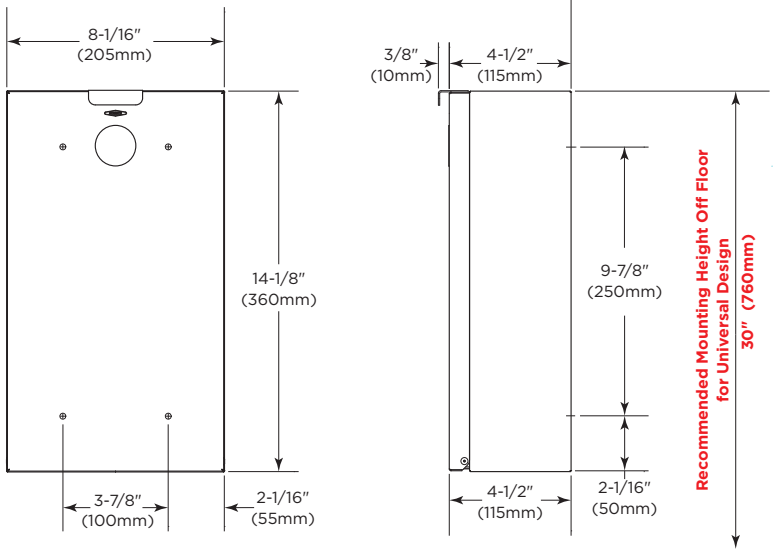
Technical Data

TrimLineSeries™ SURFACE-MOUNTED SANITARY NAPKIN DISPOSAL

B-35139

Specify Finish Required

☐ Stainless Steel, Satin Finish
☐ Matte Black Finish, please use model no. B-35139.MBLK



MATERIALS:

Cabinet — 18-8, Type-304, heavy-gauge stainless steel. All-welded construction. Exposed surfaces have satin finish or matte black, as specified.

Skirt — 18-8, Type-304, stainless steel with satin finish or matte black, as specified.

Door — 18-8, Type-304, 20-gauge (0.9mm) stainless steel with satin finish or matte black, as specified. Secured to cabinet with two rivets and equipped with a magnet catch.

Waste Receptacle — 18-8, Type-304, heavy-gauge stainless steel. All-welded construction. Removable for servicing. Capacity: 0.6-gal. (2.3-L).

OPERATION:

To service waste receptacle, unlatch door and remove waste container. Cable door-swing limiter prevents damage to washroom accessories and walls.

INSTALLATION:

For partitions with particleboard or other solid core, secure with four #10 x 5/8" (4.8 x 16mm) sheet-metal screws (not furnished) at points indicated by an S, or provide through-bolts, nuts, and washers.

For hollow-core metal partitions, provide solid backing into which sheet-metal screws can be secured. If two units are installed back-to-back, then provide threaded sleeves and machine screws for the full thickness of partition.

For plaster or dry wall construction, provide concealed backing to comply with local building codes, then secure unit with sheet-metal screws.

For other wall surfaces, provide fiber plugs or expansion shields for use with sheet-metal screws, or provide 3/16" (5mm) toggle bolts or expansion bolts.

Replacement Parts:

Skirt Replacement Kit	35139-53
Waste Receptacle Replacement	35139-78

SPECIFICATION:

Surface-mounted sanitary napkin disposal shall be Type-304 stainless steel with all-welded construction; exposed surfaces shall have satin finish or matte black, as specified. Door shall be Type-304, 20-gauge (0.9mm) stainless steel with satin finish or matte black, as specified. Secured to cabinet with two rivets and equipped with a magnet catch and cable door-swing limiter. Waste receptacle shall be Type-304, heavy-gauge stainless steel. All-welded construction with a capacity of 0.6-gal. (2.3-L).

Surface-Mounted Sanitary Napkin Disposal shall be Model B-35139 of Bobrick Washroom Equipment, Inc., Clifton Park, New York; Jackson, Tennessee; Los Angeles, California; Bobrick Washroom Equipment Company, Scarborough, Ontario; Bobrick Washroom Equipment Pty. Ltd., Australia; and Bobrick Washroom Equipment Limited, United Kingdom.

Chiller3™ COUNTER-TOP

The Highest Standards…
The **SAFEST** Drinking Water

innowave® A WATERLOGIC GROUP COMPANY

THE LATEST IN **BOTTLE-LESS TECHNOLOGY**

BioCote®

A Fresh Approach and New Look

The innowave Chiller 3™ Counter-Top brings a unique, fresh approach, and a new look, to point-of-use systems in the marketplace. Unlike a bottled water cooler, incoming tap water is treated as it's needed, so the water is always fresh and great tasting. The innowave Chiller 3™ Counter-Top has a cooling capacity that surpasses that of the ordinary bottled water cooler, so you are sure to get a cold, refreshing serving of drinking water every time.

Water - Drink 8 a Day

Health care professionals recommend that the average person drink at least 8 - eight ounce servings of water every day. Unfortunately, over 2,100 contaminants have been identified as potential threats to the drinking water supply. They fall into four groups: Organic, Inorganic, Biological and Radioactive. A point-of-use water treatment system is ideal for consumers concerned about their local water quality, or who are simply looking to have better tasting water.

Modular Treatment Package

Knowing that water conditions vary between locations, innowave developed this system so it can be tailored to suit a variety of water conditions and meet customers' needs. Trained innowave® Dealers are customer-focused and will discuss the treatment technology available to combat local water conditions. In addition to a customized treatment package, this system is equipped with leak detection for added peace of mind. Once the system is installed, an innowave® Dealer provides periodic maintenance to ensure the system performs as intended.

innowave Chiller3™ Counter-Top Specifications

Width: 13.5 in. (34 cm)
Depth: 14.5 in. (37 cm)
Height: 17.75 in. (45 cm)
Water Connection: 1/4" tubing

Weight: 42 lbs. (dry)
Power Supply: 120V/60Hz
Amps: 7.6 Amps (Hot/Cold)
All figures are approximate and subject to change

The innowave Chiller 3™ Counter-Top has been tested and complies with UL Standard 399

ITS™ In-Tank Sanitization

ITS™ Controls Bacteria

The innowave Chiller 3™ Counter-Top is also equipped with ITS™ (In-Tank Sanitization). This feature utilizes ultraviolet light as an effective method to prevent the potential for biofilm (slime) buildup in the storage tank after chlorine has been reduced through carbon filtration. Ultraviolet technology also helps reduce any heterotrophic bacteria that may occur in drinking water. This reduces the need for preventative maintenance and improves drinking water quality.

Tested and Certified Treatment Technology

The innowave Chiller 3™ Counter-Top has been tested and certified by WQA according to NSF/ANSI Standard 61: Drinking Water System Components - Health Effects.

THE LATEST IN **BOTTLE-LESS TECHNOLOGY**

No More Bottles
Bottle-less drinking water technology means no more deliveries of bottles, and no more lifting and storing of heavy 5-gallon bottles. innowave systems are designed to plumb into existing water lines and use modern technology to treat water, on site, at the point-of-use.

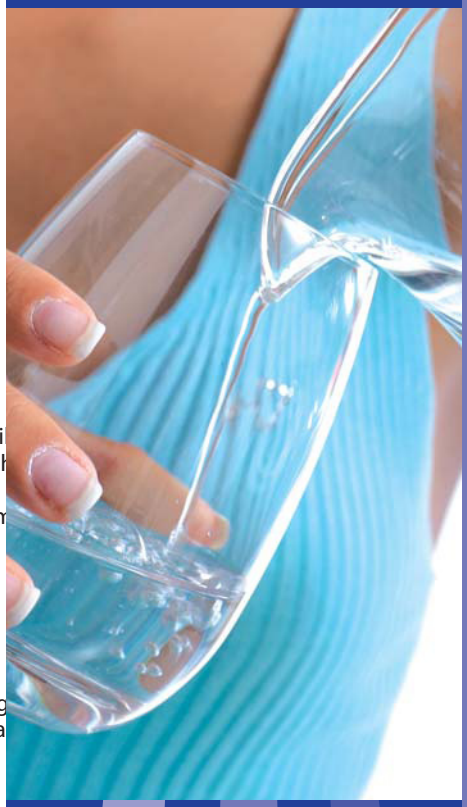
Minimal Manpower
With innowave systems, there are never any bottles to lift, store or replace. This reduces the risk of lifting injuries and workers' compensation claims associated with heavy bottles. To save you time and money, periodic preventative maintenance is performed according to innowave's strict protocols, by a qualified service technician.

Increase Security by Reducing Deliveries
Many companies today are focusing on building security. By decreasing the number of unauthorized personnel on your premises, you are contributing to the safety and well-being of all associates. Additionally, you're not blocking entries with delivery trucks, nor using up valuable space by storing water bottles!

Decrease Bacteria
Bottled water coolers have exposed reservoirs that can become contaminated if not sanitized on a routine basis. Someone's hands may be dirty when they are handling and changing bottles. Offer your employees better protection from bacteria with a self-contained, point-of-use system.

Support a Better Environment by Reducing Waste
Bottle-less technology is environmentally friendly. According to the World Wildlife Federation, the conservation organization, bottled water puts 1.5 mi tons of plastic into the environment, worldwide, each year. By changing to a point-of-use system, your company is doing something better for the environm by reducing waste.

Less Paperwork and Hassles
An economical innowave system can save money and reduce billing-related hassles. With an innowave system, there's a level payment plan every month, regardless of usage. If you're charged with managing budgets while being accountable for quality, innowa water systems are right for you.



The Highest Standards
innowave's goal is to provide water treatment systems that meet the highest standards and provide the safest drinking water. By utilizing a combination of modern water treatment technologies, innowave water treatment systems consistently provide high quality drinking water.

Welch Allyn **Green Series 777 Integrated Wall System**

Allows for reliable diagnostic patient data in a standardized and energy efficient solution to improve your bottom line.

Welch Allyn Green Series 777 Wall Transformer—configured to each facility's needs.

- Help reduce facility cost with a more energy efficient product than the 767 Wall Transformer
- Help improve workflow and save energy with handles that automatically turn on/off
- Quickly and easily upgrade from the Welch Allyn 767 Wall Transformer to the Green Series 777 Wall Transformer
- No on/off switch reduces contact, to help reduce the risk of cross-contamination

Welch Allyn Otoscopes & Ophthalmoscopes

- Standardize or choose the technology you need for each facility
- Upgrade to the Welch Allyn LED lamp for greater energy efficiency and lower cost of ownership

Welch Allyn MacroView™ Otoscope

- Almost twice the field of view and 30% greater magnification than traditional otoscopes
- Allows for simplified diagnosis of otitis media through superior visualization of the tympanic membrane

Welch Allyn Pneumatic Otoscope

- Rotating lens with ultraseal enables easy pneumatic otoscopy
- Easier instrumentation to allow a faster and more comfortable exam for the patient

Welch Allyn PanOptic™ Ophthalmoscope

- Fast, easy entry into undilated pupils with 5X larger view of the fundus for a streamlined exam
- 25º field of view vs. the standard 5º field of view provides optimal visualization

Welch Allyn Coaxial Ophthalmoscope

- 18 unique aperture/filter combinations for greater versatility
- 28 focusing lenses with a range of -25 to +40 diopters

Welch Allyn industry-leading blood pressure and thermometry devices provide you with fast, accurate and reliable patient data you can trust—to help improve patient care and clinical decisions.

Welch Allyn Wall Aneroid

- Recessed, laser-engraved dial face with high-contrast pointer provides certified accuracy to reduce errors and improve patient care
- Lifetime calibration warranty reduces cost of ownership

Welch Allyn Connex® ProBP™ Digital Blood Pressure Device

- Connectivity to most leading EHR systems, to improve patient documentation accuracy and efficiency
- Improve patient comfort and increase throughput with fast, 15-second NIBP readings
- Portable, so you can take BP readings just about anywhere

Welch Allyn Spot Vital Signs® Device

- Improve workflow by using a device that includes NIBP, pulse rate and MAP
- Optional SureTemp® thermometry and Masimo® or Nellcor® pulse oximetry

Welch Allyn Connex® Spot Monitor

- Improve patient comfort and increase throughput with 15-second NIBP readings taken as the cuff inflates
- Automated blood pressure averaging helps improve hypertension diagnosis accuracy
- Connectivity to most leading EHR systems, to improve patient vitals documentation accuracy and efficiency
- Improve workflow by using a device that includes NIBP, pulse rate, MAP, thermometry and SpO_2

Welch Allyn SureTemp® Plus Electronic Thermometer

- Provides accurate oral temperatures in 4 to 6 seconds, axillary and rectal temperatures in 10 to 13 seconds and adult axillary temperatures in 12 to 15 seconds
- Reduce risk of cross-contamination with single-use probe covers
- Improve efficiency with convenient storage for 75 probe covers
- Takes approximately 6,000 readings on 3 AA batteries and provides last temperature recall

WelchAllyn®

Specification Coversheet

Description: **Electrocardiograph (ECG), Interpretive**
Manufacturer: GE Healthcare - Cardiology (800.814.9389)
Vendor: GE Healthcare - Cardiology (800.814.9389)
Model: MAC VU360 Resting ECG Workstation w/ Basic Trolley

Alt ID: ECG-CRT
Mfr #: MAC VU360
Vendor #: MAC VU360

Item ID:

Electrocardiograph system with cart. Features: Marquette 12SL ECG Analysis Program for adults and pediatrics. 360 degree all around view, Smart Lead technology that automatically detects when a new patient is connected and Smart Auto-ECG that immediately captures and displays the first clean, high quality waveform. 1,000 records storage, AC differential ± 5mV, DC offset ±300 mV dynamic range, Up to 5 minutes of continuous digital rhythm storage (exportable as a PDF) and 15-lead analysis includes measurements of user-selectable additional 3 leads. Microprocessor augmented automatic electrocardiograph; 14-leadwire acquisition with programmable lead configuration.

MAC VU360™

Resting ECG Workstation

General

Instrument type	Microprocessor augmented automatic electrocardiograph; 14-leadwire acquisition with programmable lead configuration
ECG Interpretation	Marquette™ 12SL™ ECG Analysis Program for Adults and Pediatrics
Computerized measurements	15-lead analysis includes measurements of user-selectable additional 3 leads
Digital Rhythm	Up to 5 minutes of continuous rhythm storage (exportable as a PDF)
Storage	1,000 records
Dynamic Range	AC Differential ± 5mV, DC offset ±300 mV
Common Mode Rejection	>130 dB (>100 dB with AC filter disabled)
Input Impedance	>10MΩ @ 10 Hz
Defibrillation protection	Per IEC 60601-2-25:2011
Patient Leakage	<10 µA

Acquisition and analysis

Analog to Digital Conversion	2,000 samples/second (0.1192 µV; DC to 500 Hz)
Additional report filters	20 Hz, 40 Hz, 100 Hz, or 150 Hz

Stored and transmitted waveforms

Digital Rhythm waveform	1,000 samples/second (4.88 µV; 0.04, 0.56 ZPD to 150 Hz)
12-lead ECG waveform	500 & 1,000 samples/second
Representative (median) complex	500 & 1,000 samples/second

Pace detection

Pacemaker waveform	75,000 samples/second/channel
Pace Annotation	Dedicated pace channel on display and printed reports

Display

Display & Resolution	15.6” LED Full HD 1080P (1920 x 1080 pixels)
Touch Screen Type	Capacitive touch screen. Works while wearing medical exam gloves
Sensors	Accelerometer for putting unit in standby when display is closed

Writer

Type	Integrated thermal dot array
Number of Traces	3, 6, 12, or 15 user selectable
Writer Speeds	5, 12.5, 25, & 50 mm/s
Paper Type	Thermal, Z-fold, perforated, fan fold, 300 sheets/pack
Paper Size:	Letter: 8.5 in x 11 in (215 mm x 280 mm) A4: 8.27 in x 11.7 in (210 mm x 297.5 mm)

Electrical

Power Supply	AC mains or battery operation
Input Voltage	100-240 VAC ±10%
Battery Type	Replaceable and rechargeable internal battery (hot swappable)

Communications

ECG Management Systems Connectivity	MUSE™ (v8 or later) with bi-directional orders and ADT support
DICOM℠	Bi-directional modality worklist/orders via GE MUSE (v9 or higher) and GE DICOM Gateway Pro
Web	HTML/web capable for access to MUSE CV Web (optional)
Wireless LAN Connectivity	Wireless 802.11 a/b/g/n wireless
Certificate Hashing Algorithms	SHA1 and SHA2 support
Wired LAN Connectivity	Compatible to 10Base-T, 100Base-T and 1000Base-T LAN
Network Clock	Network time synchronization (NTP)

Security & Privacy

Encryption	All files containing PHI, local users and passwords
Login Authentication	Network: LDAP/Active Directory Local: User database
User Management	Customizable roles for limiting system access by user groups for Admin, Clinical, Service, Biomed, and user defined customized roles
Audit Trail	All user logins, logouts and login failures, file deletions, file changes, file views, file acquisitions, file transmissions, file printouts, system configuration changes
Protected Health Information (PHI) Access	Controlled by customizable roles with configurable advanced strict PHI access rules
PHI Access Logs	Detailed and exportable logs of all PHI viewing by users
Emergency access (STAT mode)	Provides access to the device without providing login credentials to perform emergency tasks such as acquiring an ECG or rhythm while preventing access to any stored patient data, orders, ADT, or 3rd party applications
USB Lockout	Software controls to disable USB ports/ connections

Vectorcardiography

Report Formats	Vector loops of main vector (QRS-STT)
Sensitivity	20, 40, 80, or 160 mm/mV
Time Resolution	2 ms

Physical Specifications

Weight	75.3 lbs max with adjustable height premium trolley and one battery
Basic trolley	20.5 x 23.5 x 57 in (52 x 60 x 145 cm)
Easy Clean trolley	19 x 28 x 56-58 in (48 x 71 x 142-147 cm)
Easy Clean trolley with adjustable height	19 x 28 x 56-62 in (48 x 71 x 142-158 cm) 6 in (16 cm) of height adjustability

Input Devices

Keyboard	Sealed elastomer membrane keyboard with tactile feedback
Touchscreen	Full HD (1080p) projected Capacitive (PCAP) multipoint touch input that works while wearing medical exam gloves
Barcode	Supported (optional)
Mouse	Supported (not included)

Barcode Support

Types	Fixed and variable length
Symbologies	Code-128, PDF417, Code 39, Interleaved Code 2 of 5, and Data Matrix symbology for characters A-Z (upper case), a-z (lower case), and 0-9 for all supported languages

Acquisition Unit

Quality Indicators	Real-time Hookup Advisor with LED lead quality indicators
Remote control	ECG acquisition button, rhythm acquisition button, stop button
Ingress Protection Level	IPx4

Cleaning

Approved cleaning agents	Soap and water solution Sodium Hypochlorite (NaOCl) 5% solution Ethanol (ethyl alcohol) 96% (v/v) Isopropyl alcohol 70% (m/m) Hydrogen Peroxide 20% (v/v) Phenol 2% (V/V) Super Sani-Cloth®

Delta

32 Gallon Linen Collection Hamper

SILENT, HANDS-FREE CLOSURE

Hydraulic pistons enable silent closing of container cover; foot pedal provides hands-free opening.

HEAVY LOAD SUPPORT

Solid co-polymer base provides full support for heavy loads; eliminates bag dragging.

COLOR-CODING OPTIONS

Cover available in various colors to indicate different types of soiled linen, area-specific collection or other color-coding needs.

CO-POLYMER CONSTRUCTION

Easy to clean, sturdy, light-weight and won't rust. Polymer wheels swivel silently and provide maximum manueverability.

FILMOP®
Engineered Cleaning Systems

ABOUT DELTA LINEN COLLECTION SYSTEM

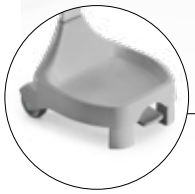
Hydraulic pistons inside cover = silent closure

Ergonomic push bar

Use any bag with 18"diameter opening

Carry-All Basket: Removable basket for gloves, extra bags, spray bottles, cloths, etc.

Front foot pedal mechanism = Hands-free opening of cover



Rounded, smooth co-polymer = Easy cleaning, disinfecting

Solid co-polymer base provides support for heavy loads

Tuck-n-Snap Bag Holding System

Lift Tuck-n-Snap brackets and wrap bag edges around them.

Lower brackets and snap into outer frame.

The Tuck-n-Snap system automatically conforms to the bag's thickness to securely hold the bag.

Lift Tuck-n-Snap brackets to remove bag.

DELTA Components & Accessories

DELTA COLLECTION FRAME KIT:
Gray co-polymer frame with 4 swivel wheels, foot pedal, hydraulic pistons and colored cover of choice. Two stationary front feet included for optional use.

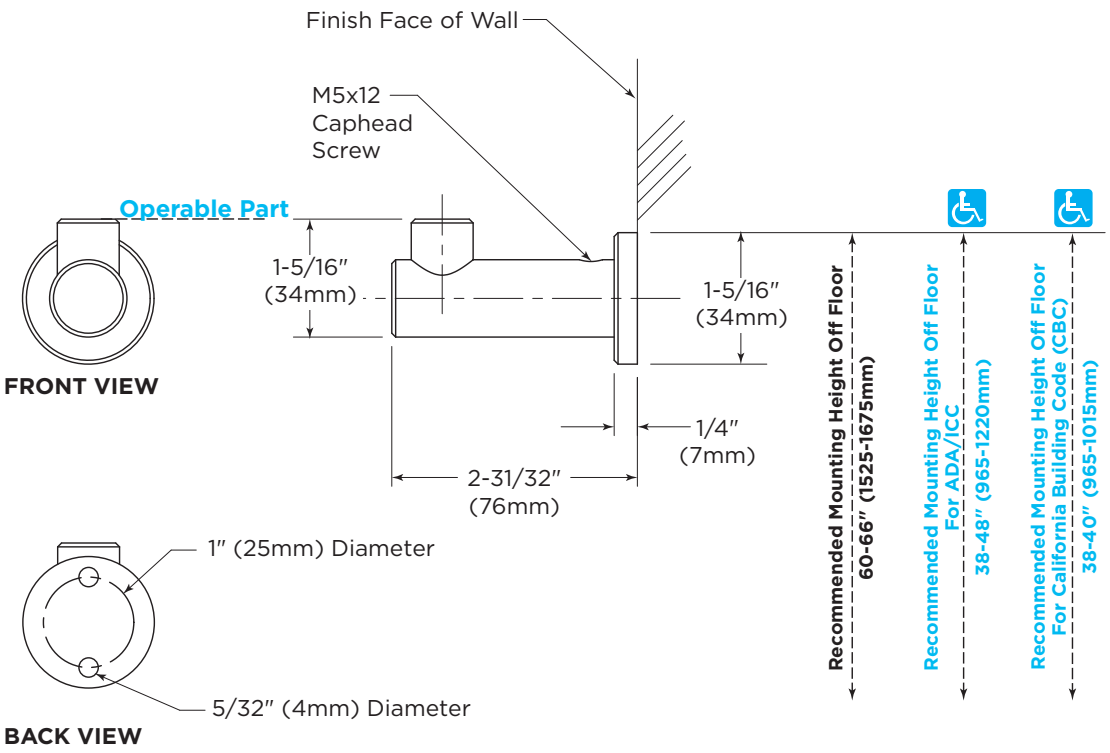
COAT HOOK

B-9542

Specify Finish Required

- ☐ Stainless Steel, Satin Finish
- ☐ Matte Black Finish, please use model no. B-9542.MBLK



ADA/CBC Installation Guidance

***Operable Part:** Top of hook pin.

Maximum mounting height of Operable Part:
ADA/ICC: 48" above finished floor (AFF)
CBC: 40" above finished floor (AFF)

*For more information regarding operable parts, please refer to Bobrick Planning Guide for Accessible Restrooms, page 9.

MATERIAL:

Post — Type 303, solid machined stainless steel in satin finish, 3/4" (20mm) diameter, 2-31/32" (76mm) long. Post is fastened to the flange via set screw, securing the flange cover.

Hook Pin — Type 303, solid machined stainless steel in satin finish, 5/8" (16mm) diameter integrated into the post.

Flange Cover — Type 303, solid machined stainless steel in satin finish, 1/16" (2mm) thick, 1-5/16" (34mm) diameter.

Concealed Mounting Flange — Type 303, solid machined stainless steel, 5/32" (4mm) thick, 1-5/16" (34mm) diameter, equipped with two mounting holes for attachment to wall.

STRENGTH:

Bobrick coat hook B-9542 can support loads of up to 150lbs. (68kg.) if properly installed.

continued . . .

5-Year Limited Warranty — In addition to Bobrick's one-year guarantee, Bobrick extends a limited 5-year warranty from the date of purchase on all parts for model B-9542. This warranty is limited to the repair or exchange of defective parts at the option of Bobrick and is only extended to the original owner of the installed unit against defects in factory workmanship or material under normal use and service.

SAFETY WARNING:

COAT HOOK IS NO STRONGER THAN THE ANCHORS AND WALLS TO WHICH THEY ARE ATTACHED AND, THEREFORE, MUST BE FIRMLY SECURED IN ORDER TO SUPPORT THE LOADS FOR WHICH THEY ARE INTENDED. TO AVOID POTENTIAL INJURY, THE BUILDING OWNER OR MAINTENANCE PERSONNEL SHOULD REMOVE THE COAT HOOK FROM SERVICE IF THE COAT HOOK IS NOT ADEQUATELY SECURED TO WALL.

INSTALLATION:

For plaster or dry wall construction, provide concealed backing to comply with local building codes, then secure unit with sheet-metal screws (not furnished). For other wall surfaces, provide fiber plugs or expansion shields for use with sheet-metal screws (not furnished), or provide 1/8″ (3mm) toggle bolts or expansion bolts.

For partitions with particle-board or other solid core, secure with sheet-metal screws (not furnished), or provide through-bolts, nuts, and washers. For hollow-core metal partitions, provide solid backing into which the sheet-metal screws (not furnished) can be secured.

SPECIFICATION:

Coat Hook shall be type 303 machined solid stainless steel in satin finish or matte black, as specified. Coat Hook shall have 3/4″ (20mm) diameter post with integrated 16mm diameter Hook Pin. Concealed mounting flange shall be 5/32″ (4mm) thick machined solid stainless steel plate, 1-5/16″ (34mm) diameter and equipped with two screw holes for attachment. Machined solid flange cover shall be 1/16″ (2mm) thick stainless steel in satin finish or matte black, as specified, 1-5/16″ (34mm) diameter. Set screw shall fasten the post to the flange and secures the flange cover.

Coat Hook shall be Model B-9542 of Bobrick Washroom Equipment, Inc., Clifton Park, New York; Jackson, Tennessee; Los Angeles, California; Bobrick Washroom Equipment Company, Scarborough, Ontario; Bobrick Washroom Equipment Pty. Ltd., Australia; and Bobrick Washroom Equipment Limited, United Kingdom.

Specification Coversheet

Description: **Hypo-Hyperthermia Unit, General**

Alt ID: HYP-GEN

Manufacturer: Medivance, Inc. - Subsidiary of Bard Medical ((303) 926-1917)

Mfr #: 5000-00-00e

Vendor: Medivance, Inc. - Subsidiary of Bard Medical ((303) 926-1917)

Vendor #: 5000-00-00e

Model: Arctic Sun 5000e

Item ID:

Hypo-hyperthermia unit with touch screen interface. Temperature Management System for monitoring and controlling patient temperature. Consists of the Arctic Sun, TIM (Transmission Interface Module) Unit, and EMR capability. Features four hospital defined protocols, offers visibility and duration tracking during therapy, new timer starts for normothermia phase, and hardware accessory kit. A series of hardware and software provides direct data streaming to the hospital IT system, continuous live data output, and fully tracks all four phases of therapy. Patient temperature control range: 32°C to 38.5°C (89.6°F to 101.3°F). Reservoir capacity: 3.5 liters; water flow rate: 5 liters per minute. Patient probe type: YSI 400 Series compatible.

SIMPLY ADVANCED.™ | ARCTIC SUN® 5000
TEMPERATURE MANAGEMENT SYSTEM

Leading the market isn't enough

INTRODUCING THE ARCTIC SUN® 5000e Temperature Management System

The future of medicine is less invasive and more effective. ARCTIC SUN® 5000e Temperature Management System is non-invasive **and** effective. It elevates the science of core body temperature management, delivering precision cooling... without cutting.

Useful real-time data

The ARCTIC SUN® 5000e Temperature Management System is the only advanced TTM delivery device that features data output capabilities. The Transmission Interface Module (TIM) enables communication from the device to data aggregation systems.

Four hospital defined protocols

Customization of treatment profile: The ARCTIC SUN® 5000e Temperature Management System can now store up to four pre-set protocols to precisely deliver core body temperature management.

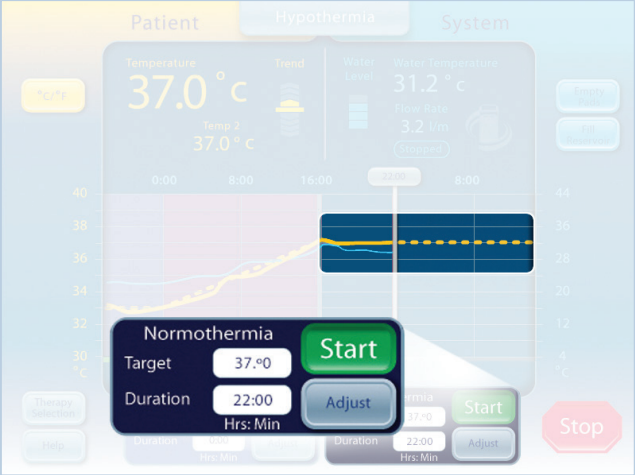
BARD | MEDICAL

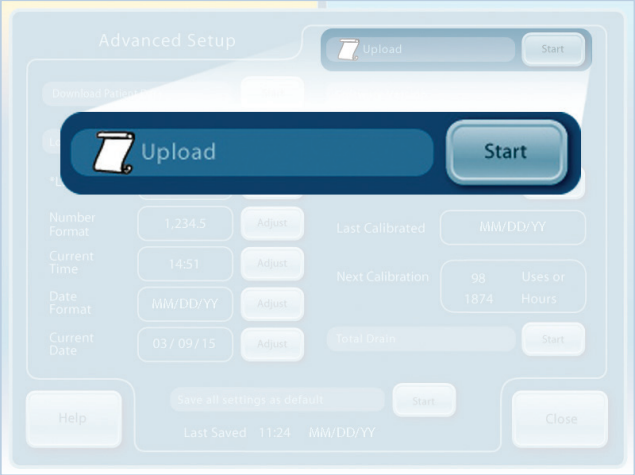
Window into the patient

Visibility and duration tracking during all phases of therapy (induction, maintenance, rewarming, and normothermia). The ARCTIC SUN® 5000e Temperature Management System Therapy Screen illustrates maintained normothermia and tracks the phase duration for you.

Quick access to your procedure

Administering Targeted Temperature Management requires a high level of expertise with a multidisciplinary approach. With the ARCTIC SUN® 5000e Temperature Management System, you can upload your procedure for quick reference. This image can include your order set, checklist, or step-by-step guide.





Indications for Use:

The ARCTIC SUN® Temperature Management System is a thermal regulating system, indicated for monitoring and controlling patient temperature.

Contraindications
- There are no known contraindications for the use of a thermoregulatory system.
- Do not place ARCTICGEL™ Pads on skin that has signs of ulcerations, burns, hives or rash.
- While there are no known allergies to hydrogel materials, caution should be exercised with any patient with a history of skin allergies or sensitivities.

Warnings
- When using the ARCTIC SUN® Temperature Management System, note that all other thermal conductive systems, in use while warming or cooling with this device may interfere with patient temperature control.

Cautions
- Due to underlying medical or physiological conditions, some patients are more susceptible to skin damage from pressure and heat or cold. Patients at risk include those with poor tissue perfusion or poor skin integrity due to diabetes, peripheral vascular disease, poor nutritional status, steroid use or high dose vasopressor therapy. Examine the patient's skin under the ARCTICGEL™ Pads.
- Skin injury may occur as a cumulative result of pressure, time and temperature.
- Carefully remove ArcticGel™ Pads from the patient's skin at the completion of use. Aggressive removal or removal of cold pads from the patient's skin may result in skin tears.
- The rate of temperature change and potentially the final achievable patient temperature is affected by many factors. Treatment application, monitoring and results are the responsibility of the attending physician. If the patient does not reach target temperature in a reasonable time or the patient is not able to be maintained at the target temperature, the skin may be exposed to low or high water temperatures for an extended period of time which may increase the risk for skin injury.

Please consult package insert for more detailed safety information and instructions for use.

TEMPERATURE MANAGEMENT SYSTEM

TECHNICAL SPECIFICATIONS:

Therapy Modes
Normothermia: Control Patient
Hypothermia: Cool Patient
Rewarm Patient

Heater Capacity
2500 BTU/hr / 750 Watts

Circulating Fluid
Distilled or Sterile Water

Reservoir Capacity
3.5 liters

Water Flow Rate
5 liters per minute

Patient Probe Type
YSI 400 Series compatible

Patient Temperature Inputs
Patient Temp 1: control, monitor, alarm
Patient Temp 2: monitor, alarm

Patient Temperature Display Range
10°C to 44°C
50°F to 111.2°F
0.1°C / °F increments

Patient Temperature Measurement Accuracy
±0.4°C (10°C to 32°C)
±0.2°C (32°C to 38°C)
±0.4°C (38°C to 44°C)
Includes ±°0.1C external probe

Patient Temperature Control Range
32°C to 38.5°C
89.6°F to 101.3°F
0.1 °C/°F increments

Water Temperature Display Range
3°C to 45°C / 37.4°F to 113.0°F
1 °C/°F increments

Water Temperature Control Range (Manual)
4°C to 42°C / 39.2°F to 107.6°F
0.1 °C/°F increments

High Water Temperature Limit
36°C to 42°C / 96.8°F to 107.6°F
1 °C/°F increments

Low Water Temperature Limit
4°C to 25°C / 39.2°F to 77°F
1 °C/°F increments

Mains Input
115 VAC, 60 Hz, 11.0 Amp (nominal)
230 VAC, 50 Hz, 5.5 Amp

Leakage Current
<300 µA

Operating Relative Humidity Range
10°C to 27°C / 50°F to 80°F

Storage Temperature Range
-30°C to 50°C / -20°F to 120°F

[1] Internal filter is a 5 micron particle and carbon filter.

Features

Compact size, only 17.62" (44.8 cm) tall to fit on counters under standard cabinets

7 lb (3.2 kg) ice storage capacity

Integral air-cooled ice machine with up to 125 lb (56.7 kg) daily production of popular Chewblet ice

- designed to serve up to 50 people (201 servings per 9 hr day[1])
- soft, chewable, compressed nugget ice is preferred over cubes[2]
- environmentally responsible R134a refrigerant with zero ozone depletion potential
- energy saving sleep mode
- quiet production without noisy harvest cycles
- meets the Consortium for Energy Efficiency (CEE) Tier 2 specifications for highly efficient ice machines

Durable, attractive dispenser

- modern styling, stainless steel exterior with accent trim
- dispense-activated soft blue light illuminates point-of-use
- easy-to-clean, removable 20 oz (591 ml) drip tray

Designed with sanitation in mind

- Agion® silver-based antimicrobial product protection of key ice and water contact components[3]
- capacitive touch controls eliminate direct contact with ice

Installation

- comes fully assembled
- two easy connections – electric and water
- drainless design allows dispenser to be placed anywhere a water line can be run and eliminates the cost of a drain installation

Warranty

- 2 years parts and labor, 5 years compressor parts
- optional extended third year warranty (item# 00960732)

Accessories

Touchless SensorSAFE™ dispensing kit, user installed on new and existing models, refer to form# 8815 for additional details.

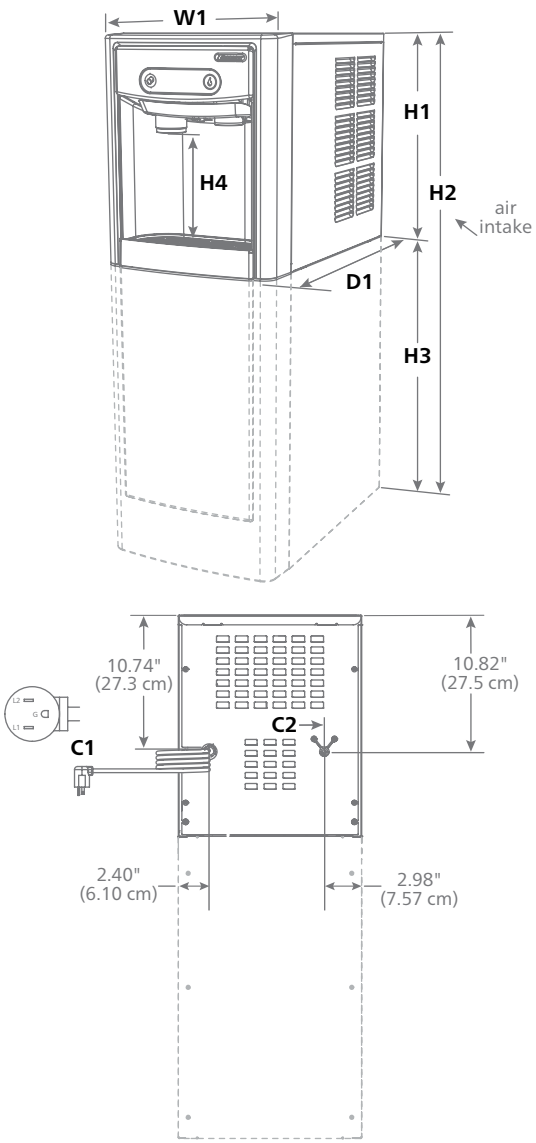
Water consumption	12 gal (45.4 L) of potable water per 100 lb (45.4 kg) of ice
Approximate net weight – countertop models	74 lb (34 kg)
Approximate shipping weight – countertop models	87 lb (40 kg)
Approximate net weight – optional base stand	24 lb (11 kg)
Approximate shipping weight – optional base stand	42 lb (19 kg)

NOTE: Intended for commercial use only. Follett can't guarantee freight carrier's ability to deliver to residential locations. Follett service providers may not be bonded to perform on-site warranty repairs in certain areas.

SHORT FORM SPECIFICATION: (Choose one) ____ Ice and water or ____ ice-only dispenser to be Follett automatic load in countertop configuration, with 7 lb (3.2 kg) of storage. Environmentally responsible R134a ice machine to be air-cooled. Ice machine to produce approximately 125 lb (56.7 kg) of Chewblet compressed nugget ice at air temperature of 70 F (21 C) and water temperature of 50 F (10 C). Ice machine to be equipped with printed circuit board and diagnostics to allow simplified servicing and with capacitive touch user interface. Storage area to be insulated with CARB compliant non-HFC foam. 8' (2.4 m) cord and NEMA 5-15 90º plug provided. 115 V/60/1. NSF and ETL listed. For use in applications with greater than 5 mg/l but less than 400 mg/l total dissolved solids in water and less than 200 mg/l hardness (either naturally occurring or treated with reverse osmosis or other TDS reducing technology).

Dimensional drawing



[1] 4 oz (118 ml) of ice per cup in a 12 oz (355 ml) cup.
[2] Independent third party studies. Contact Follett for details.
[3] Disclaimer: Antimicrobial protection is limited to the treated components and does not treat water or ice.

12 lb (5.4 kg) ice storage capacity

Integral air-cooled ice machine with up to 425 lb (193.0 kg) daily production of Chewblet ice

- soft, chewable, compressed nugget ice is preferred over cubes[1] and is ideal for patient care
- Quiet Night™ sleep mode turns off ice machine when idle

Designed with sanitation in mind

- automatic self-flushing of ice machine removes impurities
- drain cup provides internal air gap for added protection of food zone components from drain line contaminants
- Agion® silver-based antimicrobial provides protection of key ice and water contact components[2]
- one-hand lever or SensorSAFE infrared ice dispense

Dependable design, easy to service and clean

- cleaning and sanitizing of entire machine takes only 1 hour
- LED control board provides at-a-glance machine status
- panels are easily removed for accessibility to all components
- ice machine parts are common across all Symphony Plus dispensers
- stainless steel evaporator and auger deliver long life

Environmentally responsible

- meets Consortium for Energy Efficiency Tier 2 specifications
- R404a refrigerant has zero ozone depletion potential
- continuous ice making process uses less electricity and water

Durable, attractive dispenser

- stainless steel cabinet with accent trim
- poly drain pan, grille and dispenser lid are corrosion-resistant

Easy installation

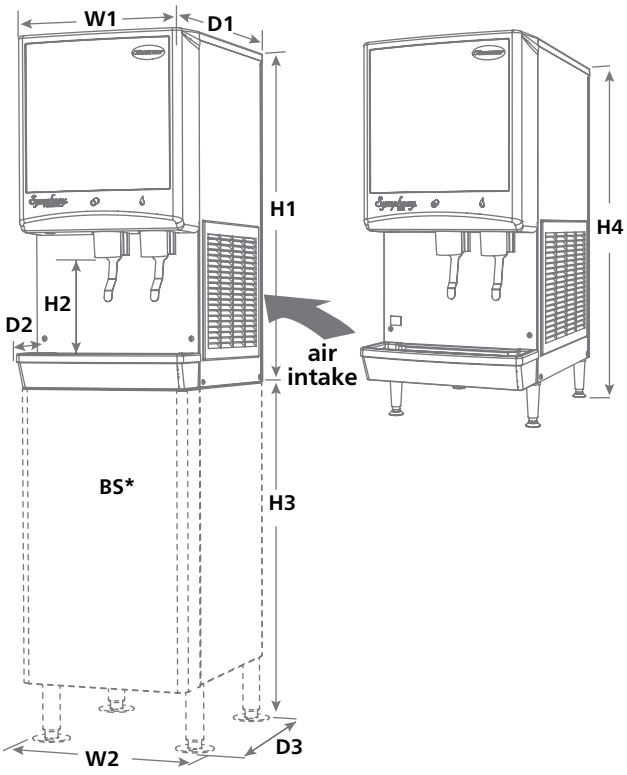
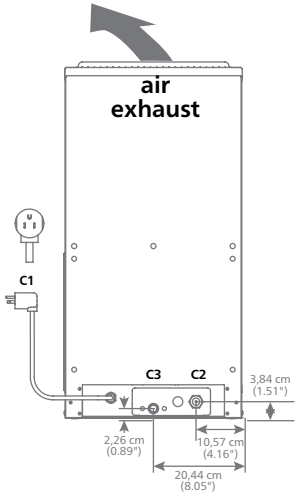
Water pressure	10 - 70 psi (69 - 483 kpa)
Heat rejection	5000 BTU/hr
Approximate net weight	144 lb (65 kg)
Approximate ship weight	199 lb (90 kg)
Approximate ship weight, base stand accessory	80 lb (36 kg)

NOTE: For indoor use only

SHORT FORM SPECIFICATION: (Choose one) ___ Ice and water or ___ ice-only dispenser to be Follett® automatic load in countertop configuration, with 12 lb (5.4 kg) of storage and separate ice and water chutes. Environmentally responsible R404a air-cooled ice machine to have 24 hour production capacity of approximately 425 lb (193.0 kg) of Chewblet compressed nugget ice at water temp. of 70 F (21 C); air temp. of 50 F (10 C). Ice machine equipped with automatic self-flushing and Quiet Night sleep mode. Dispenser to have automatic bin level control to start and stop ice machine. Storage area insulated with CARB compliant non-HFC foam. 8.5' (2.6 m) cord and NEMA 5-15 90º hospital grade plug provided. NSF and ETL listed.

Dimensional drawing





BS*– Base stand sold separately; measurements shown are with base stand legs at lowest position.

See dispenser detail sheet, form# 6675, for counter cutouts.

Features

Two systems to choose – carbon or carbonless

Capacities to choose – 3,000 or 15,000 gal (11,340 or 56,700 l) for carbon or 15,000 gal (56,700 l) for carbonless

All systems includes pre-filter, primary filter, pressure gauge and wall mounting bracket

Carbon filters

- includes silver-based antimicrobial product protection of key water contact components[1]
- removes chlorine, off-tastes and odors

Cleaner ice and water with all filters

- includes Micro-pure® II media (item# 00130229) or Fibredyne™ media (item# 00978957), both featuring antimicrobial product protection to inhibit the growth of biofilm and enhance filter performance[1]
- traps dirt as small as 0.5 micron in size
- advanced filtration system filters out parasitic cysts
- certified to ANSI/NSF standards 42 and 53

Improve ice machine performance

- dramatically reduces the most common water-related ice machine problems to keep ice machines functioning at full capacity
- reduces scale build-up from dirt and minerals in the water
- removes dirt and abrasive particles that can damage ice machine
- saves energy and reduces downtime

Space-saving design

- all systems can be mounted in areas as small as 14.75" (45.0 cm) wide by 21.00" (53.3 cm) high or out of the way below standard 34.00" - 36.00"(86.4 cm - 91.4 cm) counters

Pre-filter system saves money

- economical pre-filter filters out large particles and extends life of primary filter

Bladder ultrasound with mobile cart. 3D unit that noninvasively measures bladder volume. Scanning is available in a variety of modes for male, female, and small child, as well as functions for recall, print, or to transfer saved exams. Features an on-board tutorial and integrated help screens. System consists of the console with touch-screen display, probe that contains the ultrasound transducer, battery charger and 2 rechargeable lithium-ion batteries. The cart features a tray (10.5 x 18 inches) that holds accessories, 5 casters, and 21 inch diameter base. The ultrasound mounts to the pole above the tray. Does not include optional printer or on-site calibration.

VERATHON®

BLADDERSCAN PRIME

OPERATIONS & MAINTENANCE MANUAL

BLADDERSCAN®

IMPORTANT INFORMATION

OVERVIEW

PRODUCT DESCRIPTION

The BladderScan Prime instrument provides noninvasive measurement of urinary bladder volume. The instrument calculates the bladder volume using patented NeuralHarmonics® technology. Volume measurements made with NeuralHarmonics technology are based on a more complex, multifaceted image of the bladder.

Bladder volume, mode (male, female, and small child), directional aiming with real-time feedback, battery status and usage rate indicators are displayed on the LCD.

The system also includes a battery charger for the custom, user-replaceable lithium-ion batteries included with the system.

Stored exams can be accessed at any time using the console display.

STATEMENT OF INTENDED USE

The BladderScan Prime system is an ultrasound device intended to be used for measuring the urine volume in the bladder noninvasively.

NOTICE TO ALL USERS

The BladderScan Prime system should be used only by individuals who have been trained and authorized by a physician or the institution providing patient care. Users should read this entire manual prior to using the system. Do not attempt to operate this instrument until you thoroughly understand all instructions and procedures in this manual.

STATEMENT OF PRESCRIPTION

Caution: Federal (United States) law restricts this device to sale by or on the order of a physician.

ESSENTIAL PERFORMANCE

Essential performance is the system performance necessary to achieve freedom from unacceptable risk. The essential performance of the BladderScan Prime system is to produce ultrasonic output energy, display ultrasonic images, and display numerical values for bladder volume. The instrument shall not produce unintended or excessive probe surface temperature.

INTRODUCTION

SYSTEM OVERVIEW

BladderScan Prime is a 3D ultrasound system that noninvasively measures bladder volume. The core components of the system are a console with a touch-screen display, an ergonomic probe containing the ultrasound transducer, and a battery charger with rechargeable lithium-ion batteries. There are several accessories and configuration options available for the system, including a mobile cart, a printer, and external memory solutions. For more information, see Components & Accessories on page 8.

Figure 1. BladderScan Prime System

The BladderScan Prime system includes an onboard tutorial as well as integrated help screens. Scanning is available in a variety of modes that are suited for different patient anatomies: male, female, and small child. In addition, the console features a variety of customizable settings and a saved scans function that allows you to recall, print, or transfer saved exams.

The Prime console also features an optional live imaging pre-scan mode that enables you to locate the bladder by displaying a B-mode view of the abdomen in real time, prior to completing the volume measurement scan. This option is disabled by default. For more information about enabling this mode, see Configure Exam Settings on page 28.

COMPONENTS & ACCESSORIES

Table 1. Included System Components & Accessories

INCLUDED SYSTEM COMPONENTS & ACCESSORIES

 Mobile Cart	 Printer	 Thermal Paper

Additionally, quick reference materials and ultrasound gel may be available for order in your region. For more information, contact Verathon® Customer Care or your local representative or visit verathon.com/support.

SYSTEM FEATURES

CONSOLE FEATURES

The BladderScan Prime console's primary feature is a touch-screen display that allows you to perform scans, manage scan results, and customize settings. The console also provides controls for adjusting brightness and volume and activating the system or putting it in standby mode. A rechargeable battery is inserted into one side of the console, and the other side features a selection of ports for connecting system components and accessories such as external, removable media storage devices. You may also customize your console by adding an optional printer, attaching the console base, or mounting the console on a mobile cart.

Figure 2. Console Features

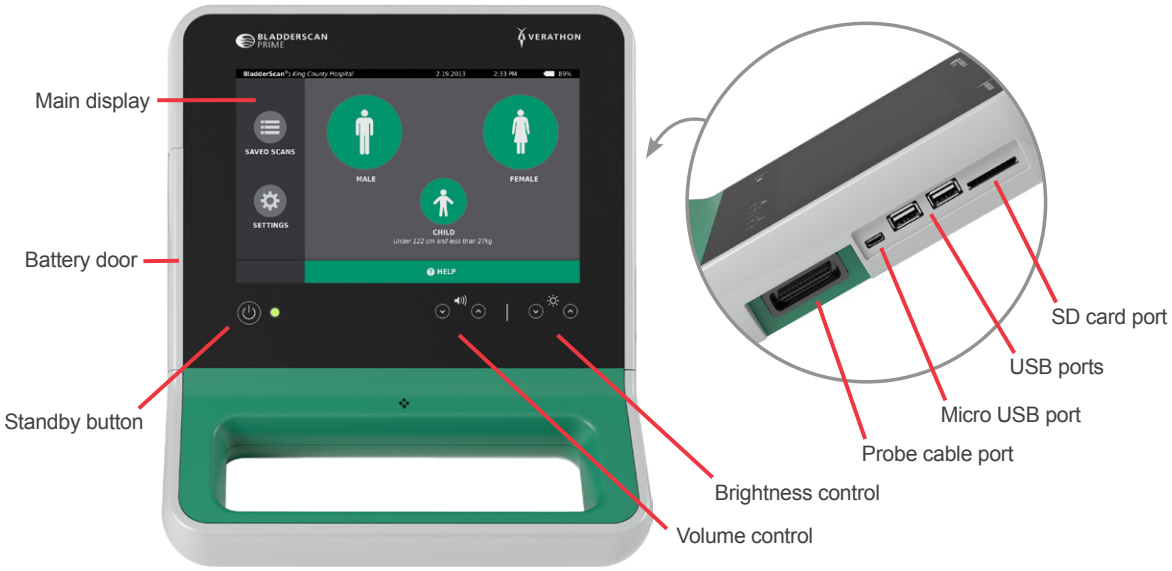

Table 3. Console Features

PART NAME	PURPOSE
Main display	Features touch-screen controls of the system user interface.
Battery door	Opens to access and replace the rechargeable battery.
Standby button	Activates the unit or puts it in standby mode. When the unit is active, an LED next to the Standby button is illuminated.
Volume control	Adjusts volume up or down.
Brightness control	Adjusts the main display to be brighter or dimmer.
Probe cable port	Connects the system probe and console.
USB ports	Provides connection for external, removable storage media.
Micro USB port	Not functional in this version of BladderScan Prime.
SD card port	Provides connection for external, removable storage media.

Note: The console USB and SD ports are designed to support removable storage media. Use these ports with USB flash drives and SD cards only. Do not attempt to use the ports with other devices.

ACCURACY SPECIFICATIONS

Table 13. Accuracy Specifications

SPECIFICATION	DESCRIPTION
Bladder volume range	0 to 999 mL
Volume accuracy	± (15% ± 15 mL)

The accuracy specifications assume the instrument is being used according to the instructions provided by Verathon® while scanning a tissue-equivalent phantom.

To maintain accuracy within the sensitivity threshold, the instrument displays a 0 mL measurement when the detected volume is less than 30 mL in male or female scanning modes or below 15 mL in pediatric mode.

BATTERY SPECIFICATIONS

The BladderScan Prime system is provided with two lithium-ion batteries. A battery symbol on the instrument LCD is always present, indicating how much power remains and when the battery needs to be changed. You can change the battery whenever necessary.

Adhere to the following recommendations and guidance:

- Use only the battery charger provided with the system. Any other battery charger may damage the batteries.
- It is recommended that you replace the batteries every 2 years. Contact Verathon® Customer Care or your local representative to order replacement batteries.

15. Storage for Linens and Equipment
16. Examination Table – 1930 x 610 mm (76 x 24 inches)
17. Lavatory and Dressing Room
18. Door – at least 762 mm (30 inches)

* Dimensions given with floating keyboard stowed for transport and the Main Monitor down.

External Inputs and Outputs :

Environmental Requirements

Operating Temperature	10 to 35 C (50 to 96F)
Operating Humidity	30 to 80 % rH, non-condensing , Pressure : 70 –106 kPa
Heat Dissipation	3070 BTU/hour + 300 Btu for each person. Without lights, other equipment etc.
Storage Temperature	-10 to 50 C (-14 to 122 F) ,
Storage Humidity	30% - 80 % rH, non-condensing , Pressure : 70 –106 kPa
Lighting	Combination lighting system (dim/bright) is recommended. Keep in mind that lighting controls and dimmers can be a source of EMI which could degrade image quality.

Electrical Specifications

Voltage	100 –240 VAC +- %10 / 50, 60 Hz (+-2%) At 230 VAC -> up to 8A , at 100 VAC—> up to 10A
Power Consumption	1 KVA
Site Power Outlets	A dedicated AC power outlet must be within reach of the unit without extension cords
Inrush current (These values are estimations)	264 VAC, 50 Hz -> 6A, 60 Hz -> 5A 220 VAC, 50 Hz -> 5.5A , 60 Hz -> 6A 110 VAC, 50 Hz -> 9A, 60 Hz -> 11A 90 VAC, 50 Hz -> 13A, 60 Hz -> 12A
Power outage may occur	Requires a dedicated single branch circuit. To avoid circuit overload and possible loss of critical care equipment, make sure you DO NOT have any other equipment operating on the same circuit.
Acoustic Noise output	Less than 48 dB(A)

Please Note: For more information please refer to the product's service & user manuals.

Description: Locator, Vein
Manufacturer: AccuVein (816 997-9400)
Vendor: AccuVein (816 997-9400)
Model: AV500 Vein Viewing System

Alt ID: LOC-VEN
Mfr #: AV500
Vendor #: AV500

Vein locator. Intended use: Infrared light detection, digitally displays a map of the vasculature on the surface of the skin for medical procedures. Features: single button point and click technology, handheld assessment, no vents, chemical resistance, timeout choices, class 1 laser rating, standard viewing mode, inverse mode and 3 brightness levels. Green projection color, 4 to 12 inch working range and purple screen surround color. Includes charging cradle.

AccuVein®

AccuVein AV500

Description

Weight	275 grams (9.7 oz.)
Size	5 x 6 x 20 cm (2" x 2.4" x 7.9")
Integrated Battery, BA500	Product contains integrated Li-Ion battery. 3.6V, 3,100 mAh
Continuous (vein light on) run time on full charge:	Typically, 120 minutes
Maximum charging time	Charging battery from 5% charged to 100% 3 hours 45 minutes
CC500 desktop charging cradle + PS510 power supply	5V 2.0A 100V-240V 50Hz-60Hz 0.4A
Product sealing	Dust / liquid IPx0

Environment

Operating	Temperature	4°C to 33°C (39°F to 90°F)
	Humidity	5% to 85% RH non-condensing
	Pressure	75kPa to 106kPa
Transport	Temperature	-20°C to 50°C (-4°F to 122°F)
	Humidity	5% to 85% RH non-condensing
Storage	Temperature	-20°C to 50°C (-4°F to 122°F)
	Humidity	5% to 85% RH non-condensing

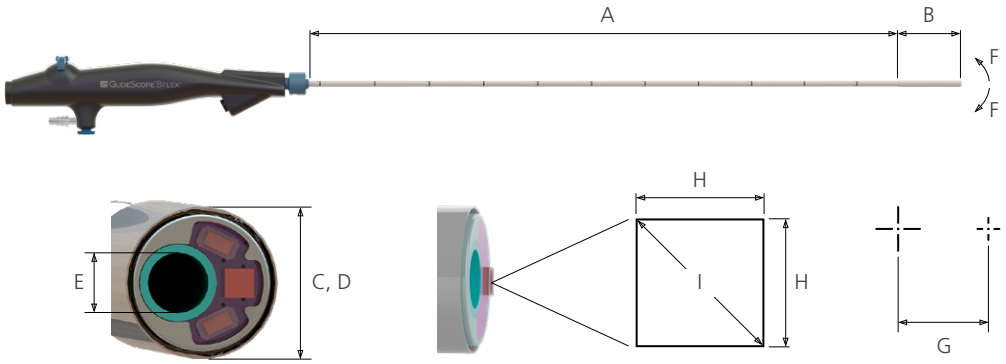
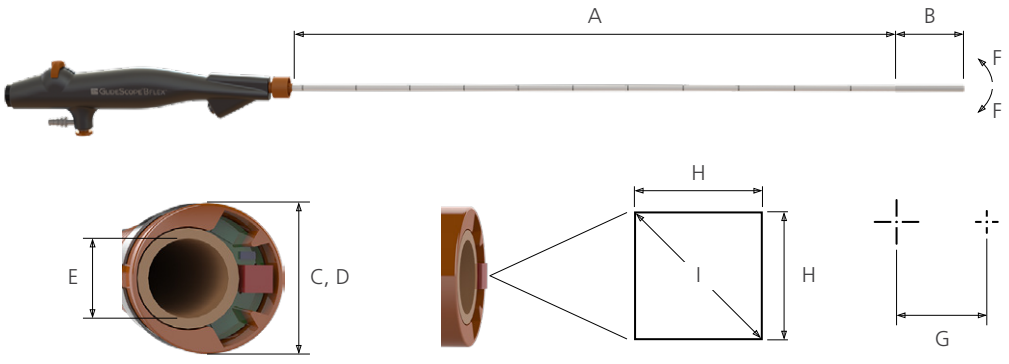
BFLEX 5.0 (0570-0374; SINGLE-USE SYSTEM)	
Specification	Value
Length of flexible insertion tube (A)	566 mm*
Length of distal tip (B)	44 mm
Outside diameter of flexible insertion tube (C)	5.0 mm
Maximum outside diameter of flexible insertion tube and distal tip (D)	5.5 mm
Minimum internal diameter of endotracheal tube	6.0 mm
Minimum inside diameter of working channel (E)	2.1 mm†
Maximum accessory width	2.0 mm
Length of working channel	696 mm‡
Volume of working channel	2.77 cc (2.77 mL)
Range of movement of distal tip (F)	130° up, 130° down
Depth of field (G)	5–50 mm
Direction of view, relative to center line of distal tip	0°
Field of view, horizontal/vertical (H)	85°
Field of view, diagonal (I)	120°



* *The protective sheathing of the distal tip extends 6 mm over the insertion tube.*
† *There is no guarantee that accessories selected solely using this minimum instrument channel width will be compatible in combination.*
‡ *There is no guarantee that accessories selected solely using maximum insertion portion width and working length will be compatible in combination.*

BFLEX 5.8 (0570-0381; SINGLE-USE SYSTEM)	
Specification	Value
Length of flexible insertion tube (A)	566 mm*
Length of distal tip (B)	44 mm
Outside diameter of flexible insertion tube (C)	5.8 mm
Maximum outside diameter of flexible insertion tube and distal tip (D)	6.35 mm
Minimum internal diameter of endotracheal tube	7.0 mm
Minimum inside diameter of working channel (E)	3.0 mm†
Maximum accessory width	2.6 mm
Length of working channel	696 mm‡
Volume of working channel	5.2 cc (5.2 mL)
Range of movement of distal tip (F)	115° up, 120° down
Depth of field (G)	5–50 mm
Direction of view, relative to center line of distal tip	0°
Field of view, horizontal/vertical (H)	85°
Field of view, diagonal (I)	120°



* *The protective sheathing of the distal tip extends 6 mm over the insertion tube.*

† *There is no guarantee that accessories selected solely using this minimum instrument channel width will be compatible in combination.*

‡ *There is no guarantee that accessories selected solely using maximum insertion portion width and working length will be compatible in combination.*

BATTERY SPECIFICATIONS

Table 11. Monitor Battery Specifications

CONDITION	DESCRIPTION
Battery type	Lithium-ion
Battery life	Under normal operating conditions, a fully charged battery lasts approximately 90 minutes
Charging time	Charging time off line will take no more than 6 hours from an empty battery to a full charge
Rated capacity	2150 mAh
Nominal voltage	7.2 V
Max charging voltage	8.4 V
Nominal weight	90 g (0.2 lbs)
Width	23 mm (0.9 in)
Length	391 mm (5.4 in)
Thickness	23 mm (0.9 in)

PRECISION MEDICAL®

CHROME FLOWMETERS

The hospital standard in flowmeters

They're Durable...

The polycarbonate housings are extremely durable. They are impervious to chemical solutions normally used in a clinical setting preventing clouding and spidering. The polycarbonate flow tubes insure durability.

They're Accurate...

Our flowmeters use black glass flow indicator balls. Their exceptional sphericity and uniform weight contribute to a more accurate flowmeter than those using plastic floats.

They're Precise...

Highly accurate needle valves insure precise flow-settings the first time....every time.

They're Easy to Use...

The flow control knob is on the front of the flowmeter in clear sight of the operator unlike side mount knobs which are susceptible to damage during installation of additional equipment. Our black glass float makes the flow setting easy to read.

They're Dependable...

The housings and flow tubes carry a lifetime warranty and the needle valves carry a five (5) year warranty.

SPECIFICATIONS

Model	Gas	Scale	Increments	Accuracy

Specification Coversheet

Description: **Regulator, Suction, Intermittent/Continuous**

Manufacturer: Precision Medical ((610) 262-6090)

Vendor: Precision Medical ((610) 262-6090)

Model: PM3303 (DISS HT/Tubing Npl)

Alt ID: MDG-SCI

Mfr #: PM3303

Vendor #: PM3303

Intermittent/Continuous suction regulator. Features: DISS male bottom connection, DISS Hand Tight vacuum source connection (female). 3 modes: INT, OFF and REG. Gauge readings: 0-200 mmHg and full vacuum indication, vacuum operating range: 0-200 mmHg. Specify label color when ordering.

Vacuum Regulators

Continuous

PM3000, PM3100, PM3500 & PM3600

Continuous-Intermittent

PM3300 & PM3400

It's Field Serviceable...

The unique modular design makes service a breeze for any biomed or central supply department. Continuous VacRegs are made up of six (6) easy-to-replace modular components. Continuous-Intermittent VacRegs are made up of eight (8) easy-to-replace modular components.

It's Durable...

Unlike the plastic inlet and outlet connections on most competitor's units, the cast metal backplate connections are extremely durable, saving down time and unnecessary repair costs.

It's Compact...

As a result of its modular design, the unit is 25-50% smaller than other suction regulators making it the product of choice for crowded wall and rail areas.

It's Sturdy...

The case is made of strong ABS plastic and houses the gauge for extra protection.

It's Infection Control Friendly...

The smooth surface and rounded corners of the housing make cleaning and disinfection wipe down easier.

It's User-Friendly...

The large control knob and easy-to-read settings make vacuum adjustments simple, even in emergency situations. The optional colors are convenient for product locations.

It's Safe...

The **Pediatric** vacuum regulator is restricted to 170mmHg (±10mmHg) to prevent dangerous high vacuum situations. The gauge face is imprinted with the Precision Medical's "Stork Symbol" to indentify the unit for pediatric applications.

It's Unique...

A digital/analog gauge allows for the accuracy of digital and dependability of analog. Analog gauges on current models can be replaced with new digital/analog gauge.

Vacuum Regulator Specifications

Continuous Models

Gauge Range:

PM3000 & PM3100	0-200 mmHg and "Full Vacuum"
PM3000HV & PM3100HV	0-300 mmHg and "Max Vacuum"
PM3500	0-150 mmHg
PM3600	0-760 mmHg

Gauge Accuracy:

Analog:	± 5 % of Max	
Digital/Analog:	Digital Display:	± 1% of Full Scale
	Analog Gauge:	± 5% of MAX within ref. Indicator

Modes:

PM3000 & PM3500	OFF - REG.
PM3100 & 3600	LINE - OFF - REG

Maximum Vacuum:

PM3000 & PM3100	REG. Mode @ Full Vac - 396 mmHg
PM3500	Restricted to 170 mmHg (± 10 mmHg max.)
PM3600	REG. Mode A Full Vac - 760 mmHg

Weight:

1.1 lbs. (.50 kg)

Dimensions:

Length:	3.7 in. (9.4 cm)
Width:	2.8 in. (7.1 cm)
Height:	5.2 in. (13.2 cm)

Continuous-Intermittent Models

Gauge Range:

PM3300	0-200 mmHg and "Full Vacuum"
PM3300HV	0-300mmHg and "Max Vacuum"
PM3400	0-150 mmHg

Gauge Accuracy:

Analog:	± 5 % of Max	
Digital/Analog:	Digital Display:	± 1% of Full Scale
	Analog Gauge:	± 5% of MAX within ref. Indicator

Modes:

PM3300 & PM3400	REG - OFF - INT

Maximum Vacuum:

PM3300	REG. Mode @ Full Vac- 396 mmHg
PM3400	Restricted to 170 mmHg (± 10 mmHg max.)

Weight:

1.2 lbs. (.54 kg)

Dimensions:

Length:	4.4 in. (11.2 cm)
Width:	2.8 in. (7.1 cm)
Height:	5.3 in. (13.4 cm)

Specifications are subject to change without prior notice.

Continuous Subglottic Suction Regulator Specifications

Model Series PM9100

Scaled Suction Range:	20 - 70 mmHg (2.7 – 9.3 kPa)
Scale Accuracy:	+/- 3 mmHg (.4 kPa)
Maximum Regulator Vacuum Setting:	85 mmHg (11.3 kPa)
Flow:	37 lpm @ 20 inHg @ Max of 85 mmHg (54 lpm in "Push to Clear" mode)
Weight (without fittings):	.38 lb (.17 kg)
Dimensions (without fittigs):	
Length:	3.50 in. (88.9 mm)
Width:	2.19 in. (55.6 mm)
Height:	3.75 in. (95.3 mm)

All specifications obtained using a vacuum source of 21 inHg (71.1 kPa).
Specifications are subject to change without prior notice.
Vacuum scale & flows are for reference only.
(Verify vacuum pressure setting with PM760 Digital VacCheck)

Ordering Information

Vacuum Regulator or Vacuum Regulator with Subglottic Suction Regulator

Part numbers for Vacuum Regulators are defined by the basic model number and option suffixes:

PM3XXX

Base Model Number

see chart below

D E HV

Suffixes:

D	Digital Model
HV	High Range Vacuum Gauge (0-300mmHg)
MR	MRI Safe (Continuous only)
C	Canadian Color Coding of Fittings
T	includes VacTrap (DISS Male and Ohmeda Style Trap Bottle connections only)
VL	with Left mounted PM9100
VR	with Right mounted PM9100 (as viewed from front of device)

– DB

Labeling Color

-DB	Dark Blue
-Y	Yellow
-MG	Mint Green
-P	Purple
-G	Gray
-R	Red
-LB	Light Blue

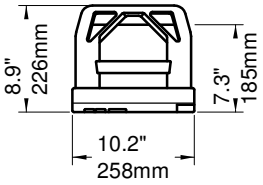
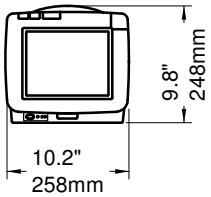
IntelliVue Patient Monitor - MP5

Standard Equipment

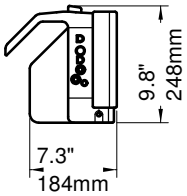
Top



Front



Side



Philips IntelliVue MP5 (M8105A)

Dimensions: 10.2" W x 9.8" H x 7.3" D
Weight: 8.8 lbs. (with ECG/Resp, NBP, SpO_2, and battery)
Heat Dissipation: < 137 Btu/hr. average, < 222 Btu/hr. peak
Power: < 40 Watts average, < 65 Watts peak

Environmental Requirements for General Equipment Locations

Heating, ventilation, air conditioning requirement for general equipment locations must maintain temperature at 32 to 95 degrees Fahrenheit and non-condensing relative humidity at 15% to 95%.

Power Requirements

15 Amp dedicated duplex outlet within 3' of the rear of unit(s).
1.3A @ 115 VAC

Network Requirements

Ethernet 10 base T outlet within 3' of the rear of the unit. All network drops are to be category 5 or higher certified.

Installation Guide

Philips MP5 Roll Stand Kit with Fixed Tilt Mount

The purpose of this guide is to:

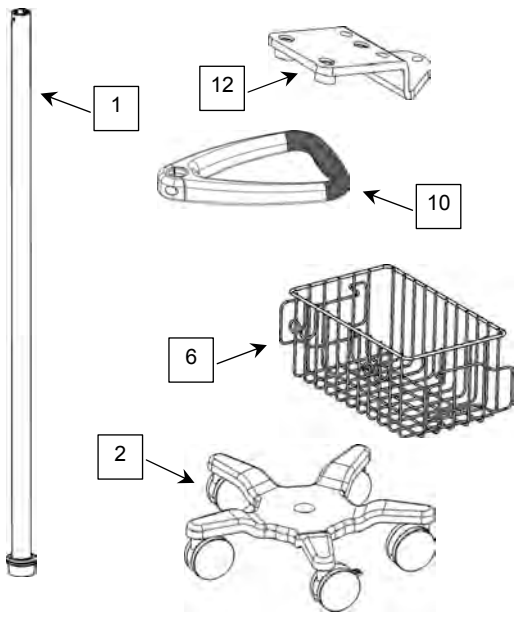
1. *Describe assembly of Roll Stand (pages 2 – 4).*
2. *Describe mounting of monitor on Roll Stand (pages 4 – 5).*

WARNING: USE OF THIS ROLL STAND FOR INSTRUMENTS OTHER THAN THOSE DESCRIBED IN THIS DOCUMENT MAY RESULT IN INJURY DUE TO TIPPING OF THE ROLL STAND. THE CUSTOMER SHOULD VERIFY THE STABILITY OF ANY DEVIATION FROM THE CONFIGURATIONS SHOWN.

Parts Reference

The following parts and hardware are included with this installation kit (hardware not shown):

Item #	Description	Qty
1	Post, 40"	1
2	Base, 21"	1
3	5/16-18 x 1" Hex Head Cap Screw (HHCS)	1
4	5/16 Flat Washer	1
5	5/16 Split Lock Washer	1
6	Utility Basket	1
7	Basket Clip	2
8	#8-32 x 7/8" Pan Head Machine Screw (PHMS)	2
9	#8-32 Hex Nut	2
10	Handle	1
11	#10-32 x 9/16" PHMS	4
12	Fixed Tilt Mount	1
13	M6 x 10mm Flat Head Machine Screw (FHMS)	3
14	M6 x 8mm PHMS	2



Tools Required: Phillips screwdriver (not provided), 1/2" [13mm] wrench (not provided).

Weight: --- lbs.
Heat Dissipation: --- Btu/hr.
Power: 100mA @ 5VDC

L **Patch Panel**

Note:

Equipment shown is a nominal configuration for a Philips IntelliVue Information Center installation with the computer remote from the Nurses/Monitoring Station. The actual equipment may vary from that shown.
Depending on other monitoring equpment purchased, there may be additional equipment present.
Cable requirements shown are for the Remote PC only. Additional cable may be required based on the monitoring equipment purchased.

Environmental Requirements for General Equipment Locations

Heating, ventilation, air conditioning requirement for general equipment locations must maintain temperature at 62 to 82 degrees Fahrenheit and non-condensing relative humidity at 30 to 60%.

Power Requirements

15 Amp dedicated quad outlet within 3' of the rear of unit(s).

Network /Cable Requirements

Ethernet 10/100 base T outlet within 3' of the rear of the computer(s). All network drops are to be category 5e or higher certified.
Minimum cable requirements: (2) Cat-5e UTP, (2) Cat-5e STP.

Accu-Chek® Inform II meter

The first wireless hospital glucose meter

Integral barcode scanner
Advanced bar code scanning for accurate patient ID confirmation

Test strip port
Allows easy dosing of the Accu-Chek Inform II test strip

Cover
Meter cover withstands robust cleaning and disinfection

Touch screen
Allows for easy entry of information including patient ID and operator ID

Flexible connectivity
Hardwire base unit or base unit hub to network or WLAN enabled for immediate transfer of patient results to the hospital medical record

Battery
50 tests after 4 hour recharge

Code key reader
Centralized entry of strip information into meter enables central control ensuring only approved test strip lots are used for testing

Life needs answers

Accu-Chek® Inform II meter

Technical specifications

Specification	Meter
Height	44 mm / 1.73 in
Width	95 mm / 3.74 in
Length	193 mm / 7.60 in
Weight	347 g (with rechargeable battery)
User interface	Touchscreen and barcode scanner
Result memory	At least 1,000 results
Operating temperature (review functions only)	3 to 50 °C (37 to 122 °F)
Storage temperature	5 to 40 °C / 41 to 104 °F at 10 to 85% RH (non-condensing)
Humidity (operating)	10 to 90% RH (non-condensing)
Air pressure	0.7 to 1.06 bar / 70 to 106 kPa
Input voltage	+ 7.5 V DC
Input frequency	DC
Input current	1.7 A (max)
Battery	Lithium-ion rechargeable (8 hr to full charge)
Tests	50 tests after 4 hours recharge

Key technical features

First truly wireless hospital glucose meter with optional in-built WiFi card	No need to dock the meter to transmit results
	Helps to enable faster therapeutic decision making to improve patient care
	Real-time updates to patient information for continuity of care
	Real-time control of both meters and operators
Flexible bi-directional connectivity options to LIS/HIS	Enhances patient ID confirmation, reduces potential errors
Designed to easy to clean	Withstands new aggressive cleaners
Graphically driven menus	Easy to use, easy to train
Rechargeable batteries	50 tests after 4 hour recharge
Software updates may be made centrally to all meters from cobas IT 1000 application	Synchronized software and functionality
Central control of active test strip lots	Helps to streamline nursing workflow
Other test entry (OTE) captures and stores results for multiple POC tests	Captures manual tests to the electronic patient record

Accu-Chek® Inform II test strip

Technical specifications

Specification	Test strip
Measurement principle	Modified glucose dehydrogenase (Mut. Q-GDH) - electrochemical detection technique
Range of measurement	10 to 600 mg/dL (0.56 to 33.31 mmol/L)
Measurement time	5 seconds
Operating temperature	8 to 44 °C (46 to 111 °F)
Sample volume	0.6 µL
Hematocrit range	10 to 65%
Altitude	< 3,094 meters above sea level (10,150 feet)
Sample types	Capillary, venous, neonatal, arterial
Calibration	IFCC plasma

Accu-Chek Inform II system components

Accessory box
Convenient storage and transport of meter and consumables

Lancets
"Pain free" single-use lancing device offering three adjustable depth settings

Code key reader
Entry of strip information into device. Ensures only approved test strips are used for testing

cobas IT 1000 application

Test strips
0.6 µL sample size
5 second test time
End dosing for easier testing

Test strip vial
Flip top vial to maintain integrity of test strips
18 months open vial stability

Control and linearity solutions
Ensures function and accuracy
2 levels of controls/
6 levels of linearity

Base Unit
Recharges meter battery. Allows for the transfer of data to and from the data management system

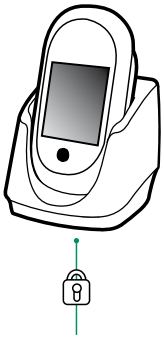
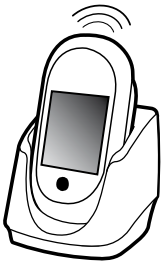
Width	118 mm / 4.65 in	118 mm / 4.65 in	169 mm / 6.65 in
Length	103mm / 4.06 in	103 mm / 4.06 in	127 mm / 5.00 in
Weight	615 g (with wallmount)	615 g (with wallmount)	470 g
User interface	LED (red, green, blue)	LED (red, green, blue)	LED (red, green, blue)
Operating temperature	3 to 50 °C / 37 to 122 °F	3 to 50 °C / 37 to 122 °F	3 to 50 °C / 37 to 122 °F
Input voltage / current	+ 7.5 V DC / 1.7 Amp (max)	+ 7.5 V DC / 1.7 Amp (max)	+ 7.5 V DC / 1.7 Amp (max)

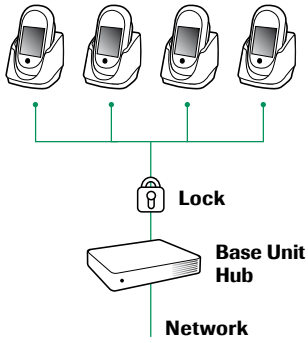
Wireless to network
Supports 802.11.g/b wireless network communications
- WEP encryption is supported using 64 or 128 bit encryption
- Wi-Fi Alliance® certified for WPA™ and WPA2™ using TKIP or AES



Base Unit to network
Base unit acts as physical docking and charging station and hardwire connection to the hospital network



Base Unit Light
Intended to be used with wirelessly enabled Accu-Chek Inform II devices if used solely as a charging station or together with base unit hub



Base Unit Hub
Intended to be used in conjunction with multiple Base Unit Lights, in order to:
Provide connectivity where there are limited network drop points available

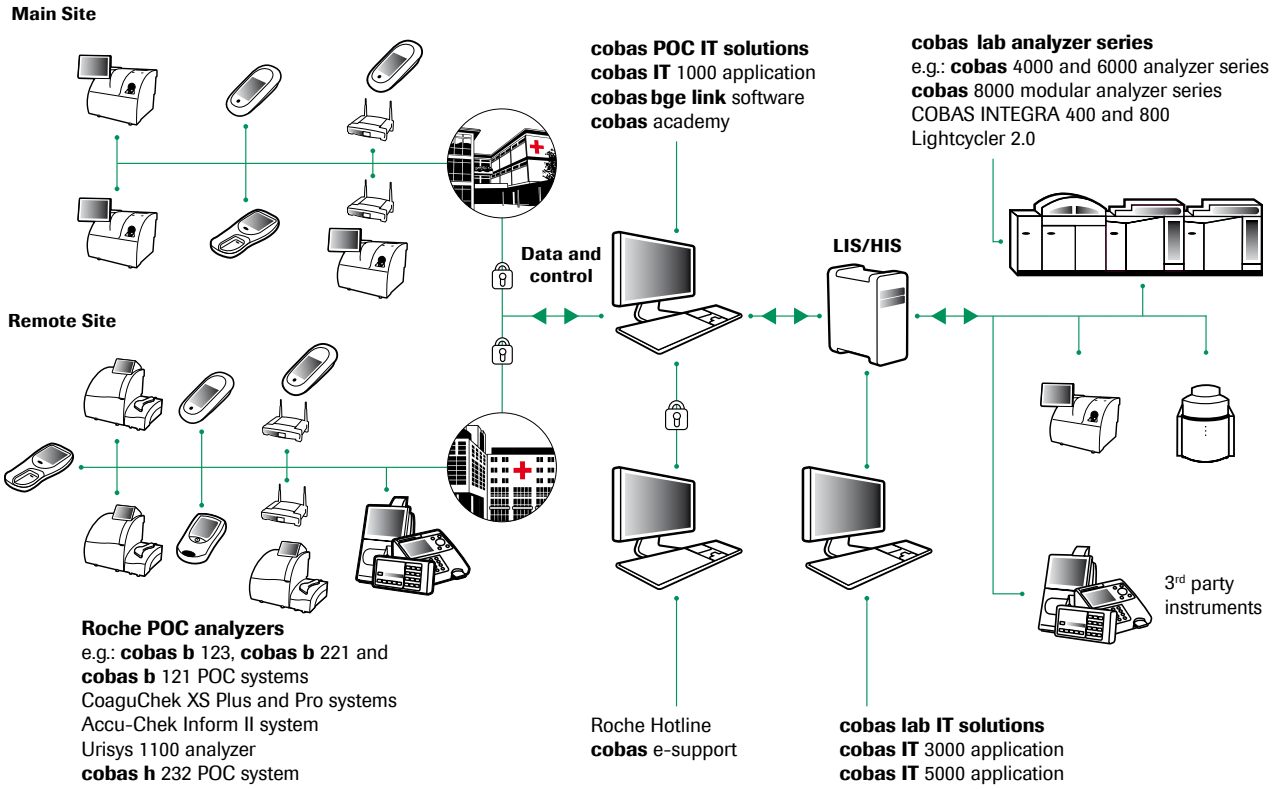
cobas academy: a module of the cobas POC IT solution



Confidence

- in the usage and condition of all analyzers
- in the reliability of results
- from a single point of control which connects all areas of the hospital
- that only trained users can run test on known instruments that have passed their quality control
- from the seamless integration of results into the LIS/HIS
- from the help in meeting regulatory and ISO standards
- from the reduced risk of transcription errors
- from the increased security through password protection

Patient population	Adult, pediatric, and neonates	Adult, pediatric, and neonates

The Multi-Measurement Server includes a collection of the most consistently required parameters in a single unit, which saves valuable space.

- Lightweight and compact
- Stores up to 8 hours of data
- For patient transport and transfer, the Multi-Measurement Server detaches and inserts into any other Philips IntelliVue monitor or Philips M3 and M4 transport monitors
- Upon return to the patient's bed, reconnects to IntelliVue and uploads stored transfer data without recabling or reconfiguring
- Can remain with a patient throughout the hospital stay

Standard Multi-Measurement Server includes SpO_2, ECG and arrhythmia, non-invasive blood pressure, and an optional invasive blood pressure/temperature port.

M8002A MP30
M8001A MP20
M3001A Multi-Measurement Server

3. 6 waves not available in the US.
4. Continuous cardiac output and PiCCO technology not available in the US.

Microstream CO_2 Extension also includes an optional invasive blood pressure/temperature port.

Capnography Extension with a choice of mainstream or sidestream CO_2 measurement is available in a variety of configurations and can include additional pressures, temperature, cardiac output, or continuous cardiac output using PiCCO® technology.[4]

Hemodynamic Extension includes cardiac output, continuous cardiac output using PiCCO technology,[4] invasive blood pressure, and temperature. An additional invasive blood pressure/temperature port is optional.

The Essential Gas Module can be integrated with the MP20 and MP30 via the IntelliVue quick mount.

Ideal for ambulatory surgery or conscious sedation with optional integrated BIS measurement.

Connex® Spot Monitor

Item Description: Monitor, Vitals Signs

Model Number: 7400 / 7500

Noninvasive Blood Pressure (NIBP)

Cuff Inflation Target	Adult: 160 mmHg Pediatric: 140 mmHg Neonate: 90 mmHg
Systolic Range	Adult/Pediatric: 30 – 260 mmHg Neonate: 20 – 120 mmHg
Diastolic Range	Adult/Pediatric: 20 – 220 mmHg Neonate: 10 – 110 mmHg
MAP Range	Adult/Pediatric: 23 – 230 mmHg Neonate: 13 – 110 mmHg
Blood Pressure Accuracy	Meets the ANSI/AAMI SP10:2002 and ISO/ANSI/AAMI 81060-2:2013 standards for noninvasive blood pressure accuracy (±5 mmHg mean error, 8 mmHg SD)
BP Determination Time	15 seconds typical, 150 seconds max
Overpressure Cutoff	Adult/Pediatric: 300 mmHg ± 15 mmHg Neonate: 150 mmHg maximum
Pulse Rate Range	Adult/Pediatric: 30 – 200 bpm Neonate: 35 – 220 bpm
Pulse Rate Accuracy	± 5.0% (±3 bpm)

Temperature

Measurement Range	SureTemp Plus: 80 - 110°F (26.7 – 43.3°C) Braun: 68 - 108°F (20 – 42.2°C)
Calibration Accuracy	SureTemp Plus: ±0.2°F (±0.1°C) Braun: ±0.4°F (for temps up to 107.6°F), ±0.5°F (for temps higher than 107.6°F)
Determination Time	Oral: Approximately 4 seconds Axillary: Approximately 4 seconds Rectal: Approximately 4 seconds Tympanic: Approximately 4 seconds

Electrical

AC Power Supply	15V at 2.33A
Operating Time (Integrated 2-Cell Battery)	Up to 12 hours with fully charged battery (6 patients per device, vitals every 4 hours with NIPB, SpO2, temp, WiFi and barcode scan)
Battery Recharge Time	4 hours
Operating Time (APM with 9-Cell Battery)	Up to 17 hours

Wireless Radio

Wireless Network Inter-face	IEEE 802.11 a/b/g/n
Frequency	2.4 GHz – 2.483 GHz (2.4 GHz bands) 5.15 GHz to 5.35 GHz, 5.725 GHz to 5.825 GHz (5 GHz bands)
Authentication/Encryption	Wireless Equivalent Privacy (WEP, RC4 Algorithm); Wi-Fi Protected Access (WPA); IEEE 802.11i (WPA2); TKIP, RC4 Algorithm; AES, Rijndael Algorithm; Encryption Key Provisioning; Static (40-bit and 128-bit lengths); PSK; Dynamic; EAP-FAST; EAP-TLS; EAP-TTLS; PEAP-GTC 1 PEAPMSCHAPv2; PEAP-TLS
FIPS 140-2	Yes

Mechanical

Dimensions	Height: 10in (25.4cm) Width: 11in (27.9cm) Depth: 6in (15.3cm)
Weight	9.5 lbs (4.3 kg)

SpO_2

Measurement Range	1 – 100%
Pulse Rate Range	Masimo: 25 – 240 bpm Nellcor: 25 – 240 bpm Nonin: 40 – 240 bpm
SpO_2 Accuracy	Masimo: ± 2 digits Nellcor: ± 3 digits Nonin: ± 3 digits
Pulse Rate Accuracy	Masimo: ± 3 digits Nellcor: ± 3 digits Nonin: ± 3 digits

Environmental

Operating Temperature	50 – 104°F (10 – 40°C)
Storage Temperature	-4 – 122°F (-20 – 50°C)
Operating Altitude	-1250 – 10,000 ft. (-381 – 3,048 m)
Operating Humidity	15% to 90% noncondensing
Storage Humidity	15% to 95% noncondensing
EMC Standard	IEC/EN 60601-1, 2nd and 3rd Edition Standards

Description

Refrigerator thermometer can monitor two different areas simultaneously. Has the ability to monitor temperatures in refrigerator and freezer simultaneously or two refrigerator locations. Fisher Scientific™ Traceable™ Hi-Accuracy Refrigerator Thermometer has an alarm which provides two visual LEDs and two audio alerts, displays exact time/date of dual thermometer alarms.

- Triple display shows minimum/maximum, current temperatures
- Min/max monitors readings for any period; displays exact time/date temperature occurred
- Programmable in 0.01° increments
- m signals continuously even if temperature returns to nonalarm range
  . micro-cable permits refrigerator doors to close on it
- emperature range: -50 to +70°C (-58 to +158°F)

- Resolution: 0.01°, accuracy: ±0.3°C
- Displays exact time/date when MIN/MAX reading occurred and time/date when alarm triggered
- Two-channel alarm is programmable in 0.1° increments and sounds continuously when temperature rises above/falls below set points
- High-impact, chemical resistant ABS plastic case is 2.75 × 4.25 × 0.75 in.
- Weight: 5 oz. (141.74g)

SCM853

11" x 18.88" x 14.25" (H x W x D)

Stainless steel microwave oven with digital touch controls; replaces SCM852

Highlights:

Perfectly sized for compact applications

Brushed stainless steel exterior offers unique style

Easy-to-clean interior made of polished stainless steel

Product Features:

Brushed stainless steel cabinet	Subtle shade with all the durability of stainless steel
Polished stainless steel interior	Elegant interior is simple to clean
Multiple power levels	Variable power options let you get the right heat for each dish
Glass turntable	Included with unit for optimum rotation
End of cycle buzzer	An audible signal lets you know when the time is up
Clock	Digital display of time
Digital touchpad	Includes automatic settings for popcorn, butter, defrosting and more

SSCOR VX-2

Complies with SAE J3043 Standard!

SSCOR VX-2

The SSCOR VX-2® is a portable, powerful battery powered suction unit that can be mounted in the action area of an ambulance and used as onboard suction. The optional charging/retention bracket connects the VX-2 to vehicle power at all times. With its variable regulator and gauge, outward facing controls, and drawing its power from the vehicle, the VX-2 is setup for on-board suction. If portable suction is required at the scene, the VX-2 can easily be removed from the retention bracket and used as portable suction, drawing power from its battery.

The VX-2 comes equipped with a battery care system which insures the battery is charged to an optimal level, prevents deep discharge and indicates battery condition.

Complete information at www.sscor.com.

Use the SSCOR Onboard Canister Clip #230-00003 (sold separately) and a Bemis 1200cc canister as shown above for SAE J3043 compliance.

SAE J3043 and EN1789 compliant Charging/Retention Bracket. Holds to a force of 25 G and conducts vehicle power to run and charge the unit.

PTS Pneumatic Tube System

Recessed Station

The Recessed Station is designed for optimal receiving and dispatching of carriers. The station's large receiving bin accommodates several carriers at a time. When the receiving bin is full, an audible alert at the station informs users of the excess carriers in the bin and a sensor notifies the system control center. A carrier can be queued in the dispatcher while another carrier is destined for the station. The queued carrier is automatically dispatched after the inbound carrier has arrived.

The Recessed Station provides a clean installation, allowing tubes to be concealed behind walls, laminate enclosures and above ceilings. Stations can be installed with minimal disruption to the work area either during the construction phase of a project or in built-out areas in existing facilities.

The Recessed Station is available with either a standard or a full-capacity dispatcher. Integrated racks provide convenient storage of empty carriers until they are needed.

The Recessed Stations are supplied with either a Standard or an optional IQ control panel (shown). The Standard control panel has drop-down operating instructions, a station directory, a numeric keypad to address the destination station, and a two-line display that alerts users of the system's status. Special function keys increase priority, track transactions, control who receives items at the destination station, etc.

Features & Benefits

- Available with Standard or IQ control panel
- Ability to queue carrier for dispatch
- Available with Standard or Full Capacity Dispatcher
- Flush mounting provides a clean, professional look
- The station is UL approved
- Can be roughed-in during new construction and remodeling

swisslog

Recessed Station **Specifications**

The Recessed Station is available for both four-inch and six-inch systems, and is compatible with all control panels.

Received Carrier Capacity:*

4-inch	5
6-inch	5

*Station is considered “full”

Empty Carrier Storage: (In Station)

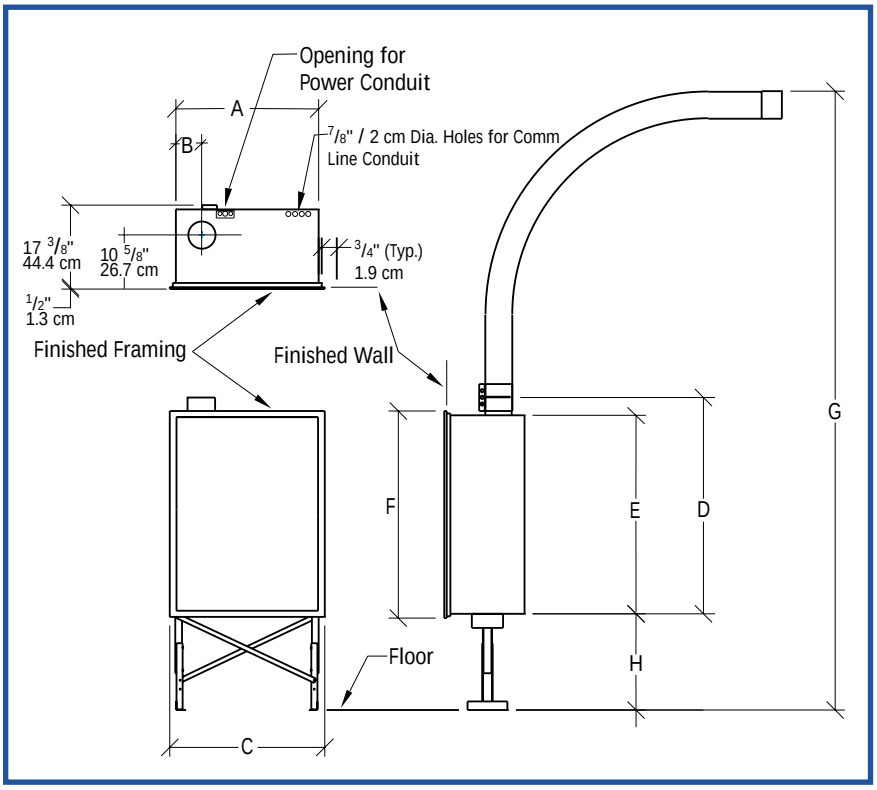
4-inch	4
6-inch	4

Power Requirements:

105 to 125 VAC, 60 Hz, single phase, 3A, unswitched, terminated at in-station Swisslog-supplied duplex outlet.

Control Requirements:

Four conductor Plenum-rated cable, #22 AWG stranded, 5 VDC maximum open circuit voltage, 200 mA maximum short circuit current.



Size	Weight	A	B	C	D	E	F	G *(see Note 1)*	H *(see Note 1)*
4-inch	200 lbs.	26 1/8"	4 7/8"	28 3/4"	48"	44 1/2"	46 3/4"	11' 10 1/8"	21 5/8"
	90.7 kg	66.2 cm	12.2 cm	73 cm	122 cm	113 cm	118.8 cm	3.6 m	55 cm
6-inch	240 lbs.	32 1/8"	5 7/8"	34 3/4"	48"	44 1/2"	46 3/4"	11' 8 1/8"	21 5/8"
	108.9 kg	81.5 cm	14.7 cm	88.3 cm	122 cm	113 cm	118.8 cm	3.6 m	55 cm

Note 1: Standard height may be reduced.

Swisslog Healthcare Solutions provides many solutions for various needs.

The Wall-Mount Station

Designed to maximize space utilization and minimize construction costs while providing the reliability and convenience of a full-size Swisslog station.

The Ultra Station

Designed to function as four separate stations with up to four dispatch/receive ports in one compact unit. Ultra Stations allow mixing of 4" and 6" tube systems.

GK420 Advanced Desktop Printers

Boost productivity with quality, reliable printing and advanced features—priced to fit your budget

Zebra's GK420™ advanced desktop printers deliver professional-quality, dependable performance and advanced features, all at a competitive price. Available in both direct thermal and thermal transfer models, these printers offer fast print speeds, network manageability and easy-load designs to help you improve operational efficiencies, boost profitability and reduce downtime. Also available in a healthcare-specific model, the printers are ideal for a wide range of environments.

GK420t

GK420d

GK420d Healthcare

GK420t Healthcare

Zebra OneCare Services

Increase printer uptime and reduce lost productivity and unbudgeted repair costs by selecting a Zebra OneCare™ service agreement. A cost-effective means of planning and budgeting for your annual maintenance expenditures, your agreement ensures that trained Zebra technicians will bring your printer back to factory specifications. Zebra offers a variety of plans to fit your budget and business needs.

Genuine Zebra Supplies

Ensure consistent print quality, reduce downtime and increase productivity in your printing process with Genuine Zebra™ supplies. We manufacture each supplies product with the exact same materials every time so you always get crisp, readable and scannable output without needing to adjust the printer darkness setting between rolls.

Advanced Features You Need— In a Dependable, Compact Printer

Available with direct thermal or thermal transfer, the GK420 combines an intuitive user interface, advanced features and the quality you expect from a Zebra® printer.

Flexible and Easy to Use

Zebra's GK420 advanced desktop printers are flexible, making them a top choice for a variety of mid-volume and distributed-printing applications. Whether you're printing transportation and logistics shipping labels, healthcare patient identification or pharmacy labels, retail coupons or receipts, or hospitality boarding passes or bag tags, GK420 printers make it easy. Fast print speeds help you get the job done quicker. And, loading media is a snap with the OpenACCESS™ clamshell design. Avoid wasted time and media with the standard auto-calibration feature.

Connectivity + Quality

Offering three connectivity interfaces and optional 10/100 Ethernet—along with standard EPL™ and ZPL® programming languages—these printers are quick and easy to integrate. Consistently producing quality text, barcodes and graphics, they ensure your print output is always professional-looking and barcodes are reliably scannable. ENERGY STAR® qualified, GK420 printers help protect your budget and reduce your total cost of ownership.

GK420 Healthcare

For healthcare-specific environments, Zebra offers the GK420 Healthcare printer—available with thermal transfer or direct thermal. These printers are constructed using durable materials in the healthcare color palette for frequent, easy cleaning with harsh disinfectant chemicals over their lifetime. Engineered to protect patient safety and ensure compliance, they also contain a medical-grade power supply that meets IEC 60601-1 standards to reduce the risk of electrical shock. With GK420 Healthcare printers, healthcare professionals can print labels and wristbands anywhere in a healthcare facility.

Cleaning Made Simple for Healthcare Models

For a complete, approved list of cleaning agent ingredients compatible with GK420 Healthcare printers, see the separate "Guide to Disinfecting and Cleaning Zebra Healthcare Printers".

ENERGY STAR

For more information about the GK420 Advanced Desktop Printers, visit www.zebra.com/gk420 or access our global contact directory at www.zebra.com/contact

COMMUNICATION AND INTERFACE CAPABILITIES

RS-232 auto-sensing Serial interface, DB-9

USB V1.1, bi-directional

Centronics® Parallel

Ethernet — 10/100 internal (optional, replaces Serial and Parallel ports)

SOFTWARE TOOLS

ZebraLink Solutions

Zebra Setup Utilities — A Windows application to quickly set up and configure your Zebra printer.

ZebraDesigner™ — Simple Windows WYSIWYG label design application with basic features.

ZebraDesigner Pro — Simple Windows WYSIWYG label design application offering more advanced features for more complex label designs.

ZebraDesigner Windows Driver — Microsoft certified for Windows Vista®, Windows 7, Windows 8, Windows 8.1, Windows 2008, and Windows 2012.

ZBI-Developer™ — Programming utility makes it dramatically easier for programmers to create and test complex ZBI 2.0™ programs and distribute them to the printer (standard with ZBI 2.0).

ZebraNet™ Bridge Enterprise — Centrally manage Zebra printers from a single PC screen anywhere on your global network.

ZebraNet Utilities v7.0 — Provides enhanced printing, conversion and administration capabilities; message management; and more.

POS Driver

Web View

Connect and control Zebra barcode printers using ZPL II via the printer's web interface using common web browsers.

Alert

Printers equipped with ZebraNet print servers will notify you via any email-enabled, wired, or wireless device to minimize downtime.

FIRMWARE

ZBI 2.0 — Optional powerful programming language that lets printers run stand-alone applications, connect to peripherals, and much more.

ZPL and ZPL II® — Zebra Programming Language provides sophisticated label formatting and printer control and is compatible with all Zebra printers.

EPL and EPL2™ — Eltron Programming Language with Line Mode simplifies label formatting and enables format compatibility with legacy applications. (EPL with Line Mode available on direct thermal models only.)

BARCODE SYMBOLOGIES

Barcode Ratios: 2:1 (non-rotated) and 3:1

Linear Barcodes: Codabar, Code 11 (ZPL), Code 128, Code 39, Code 93, Code 93, EAN-13, EAN-8, EAN-14 (ZPL), German Post Code (EPL), Industrial 2-of-5 (ZPL), Interleaved 2-of-5, Japanese Postnet (EPL), ISBT-128 (ZPL), Logmars (ZPL), MSI, Plessey, Postnet, GS1 DataBar (RSS-14), Standard 2-of-5 (ZPL), UCC/EAN-128 (EPL), UPC and EAN 2 or 5 digit extensions (ZPL), UPC-A, UPC-A and UPC-E with EAN 2 or 5 digit extensions, UPC-E, and GS1 Databar (formerly RSS)

2D Barcodes: Codablock (ZPL), Code 49 (ZPL), Data Matrix, MaxiCode, QR Code, PDF417, MicroPDF417, Aztec (For EPL and ZPL except where noted)

Ideal for These Applications

Transportation and Logistics
- Shipping labels

Healthcare
- Patient identification
- Pharmacy and product labeling

Retail
- Price marking
- Coupon and receipt printing
- Inventory and product labeling

Hospitality and Leisure
- Boarding passes
- Bag tags

Security
- Visitor ID
- Evidence tracking
- Parking passes

Manufacturing
- Light-industrial
- Work-in-process and product labeling

GK420 Specifications

FONTS AND GRAPHICS

- 16 resident expandable ZPL fonts
- One resident scalable ZPL font
- Five resident expandable EPL2 fonts
- Supports user-defined fonts and graphics — including custom logos
- Native open type font support
- Unicode™ compliant for multi-language, on-demand thermal printing
- ZPL II drawing commands — for boxes and lines
- 1.5 MB user available non-volatile memory storage for downloadable objects
- 3 MB user-available SDRAM

OPTIONS AND ACCESSORIES

- Dispenser — Label peel and present with label present sensor
- ZebraNet® 10/100 Print Server — Internal or external Ethernet for network communication and printing
- Font Packs — Asian and other international font kits
- ZKDU™ keyboard display units for stand-alone printing applications

For optimum print quality and printer performance, use Genuine Zebra supplies.

Data sheet

HP LaserJet Enterprise M605 series

A powerhouse printer loaded with manageability, energy savings, and mobile printing features.[2]

Accelerate business results with outstanding print quality. Tackle large jobs and equip workgroups for success wherever business leads.[2] Easily manage and expand this impressively fast, versatile printer—and help reduce environmental impact.

HP LaserJet Enterprise M605n

HP LaserJet Enterprise M605dn

HP LaserJet Enterprise M605x

Take productivity to the next level

- Equip users to fly through tasks with the intuitive 4.3-inch (10.9 cm) color touchscreen and PIN printing.
- Meet high-volume demands with automatic two-sided printing and versatile paper trays—up to 3600 sheets.[4]
- Improve efficiency. Add paper-handling accessories to presort jobs, print on different media, and more.[5]
- Print uninterrupted for longer periods of time with high-yield Original HP LaserJet cartridges.[6]

Meet business needs in the office and beyond

- Enable wireless direct printing in the office—from mobile devices—without accessing the network.[7]
- Print with just a touch of your NFC-enabled mobile device to this printer—no network needed.[8]
- Easily print from a variety of smartphones and tablets—generally no setup or apps required.[2]
- Easily print from virtually anywhere in the office with Ethernet and optional wireless connectivity.[9]

Advanced capabilities, easy management

- Easily expand this printer as solutions advance and workgroup needs grow, with add-on, updatable features.
- Protect sensitive data—at rest or in transit—with a variety of embedded and optional security solutions.[10]
- Easily take command of your printing environment from one central location—with HP Web Jetadmin.[11]
- Quickly troubleshoot problems using cloud-based help services that are relevant and up to date.[12]

Less energy, more efficiency and savings

- Save energy—HP Auto-On/Auto-Off Technology turns your printer on when you need it and off when you don't.[13]
- Conserve resources—this printer has lower typical electricity consumption than any device in its class.[14]
- Help save time and money with lightweight HP EcoFFICIENT paper—engineered for clean, trouble-free printing.
- Help reduce your impact. Count on easy, free cartridge recycling through HP Planet Partners.[1]

[1] Program availability varies. Original HP cartridge return and recycling is currently available in more than 49 countries, territories, and regions in Asia, Europe, and North and South America through the HP Planet Partners program. For more information, visit hp.com/recycle [2] Local printing requires mobile device and printer be on the same network or have a direct wireless connection. Wireless performance is dependent on physical environment and distance from access point. Wireless operations are compatible with 2.4 GHz operations only. Remote printing requires an Internet connection to an HP Web-connected printer. App or software and HP ePrint account registration may also be required. Wireless broadband use requires separately purchased service contract for mobile devices. Check with service provider for coverage and availability in your area. See hp.com/go/mobileprinting for more details. Some features require purchase of an optional accessory, available Fall 2015.[3] Printing speed measured using ISO/IEC 24734 and excludes first set of test documents. For more information, see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity.[4] 3600-sheet input capacity requires purchase of additional accessories. [5] Optional paper-handling accessories must be purchased separately. [6] The optional high-yield Original HP LaserJet cartridge must be purchased separately. [7] Wireless direct printing is standard on the HP LaserJet Enterprise M605x only. Requires purchase of optional module, available Fall 2015, for the LaserJet Enterprise M605n and M605dn. Mobile device needs to be connected directly to the Wi-Fi network of a wireless direct–capable multi-function printer (MFP) or printer prior to printing. Depending on mobile device, an app or driver may also be required. Wireless performance is dependent on physical environment and distance from the access point in the MFP or printer. For details, see hp.comgobusinessmobileprinting [8] Touch-to-print capability is standard on the HP LaserJet Enterprise M605x only. Requires purchase of optional HP Jetdirect 3000w near-field communications (NFC)/Wireless Accessory, available Fall 2015, for the LaserJet Enterprise M605n and M605dn. Mobile device must support NFC-enabled printing. For more information, see hp.com/go/mobileprinting [9] Wireless Internet connectivity requires purchase of an optional accessory, available Fall 2015, for the M605n and M605dn. Wireless performance is dependent on physical environment and distance from access point. Wireless operations are compatible with 2.4 GHz routers only. [10] Some solutions require download or additional purchase. Learn more at hp.com/go/printingsolutions. The encrypted hard disk drive (HDD) requires an additional purchase. [11] Universal device plug-in is offered with HP Web Jetadmin 10.3 SR4 and higher. HP Web Jetadmin is free and available for download at hp.com/go/webjetadmin [12] Online help must be enabled on the printer or MFP. Mobile device must have an Internet connection to access online services. [13] HP Auto-On/Auto-Off Technology capabilities are subject to printer and settings. [14] Based on HP testing using the ENERGY STAR® program's Typical Electricity Consumption (TEC) method or as reported in energystar.gov vs. competitive single-function black-and-white laser printers with print speeds between 56 and 70 pages per minute (ppm) as of November 2014. Actual results may vary.

Product walkaround

1. Intuitive 4.3-inch (10.9 cm) color touchscreen tilts up for easier viewing (Available on the X bundle only)
2. 600-sheet output bin
3. Top cover (access to the toner cartridge)
4. 100-sheet multipurpose tray 1
5. 500-sheet input tray 2
6. 500-sheet input tray 3
7. Hardware Integration Pocket (HIP)
8. Easy-access USB port
9. Convenient front on/off button
10. Output accessory cover
11. 512 MB standard memory (upgradeable to 1.5 GB) and a 1.2 GHz processor
12. Access port for optional Kensington style lock
13. Local area network (LAN) Ethernet (RJ 45) network port
14. Hi-speed USB 2.0 printing port
15. Hi-speed USB 2.0 port for connecting external USB devices
16. Power connection
17. Built-in automatic two-sided printing

HP Services

Downtime can have serious consequences, so HP provides support beyond the standard warranty. You benefit from reduced risk, maximized uptime, predictable service delivery and no unbudgeted repair costs. HP Care Pack Services provide a comprehensive suite of protection services designed to keep HP hardware and software up and running so employees can stay productive.

Next Business Day with Defective Media Retention:
Customers can retain their hard disk drive and keep control of sensitive data.

Same Day – 4 hour 9x5 and 13x5:
Sends an HP technician to customers' site the same business day for repair, within 4 hours, if the issue cannot be resolved through remote support. Various support window times are available, for different requirements.

Next Business Day Exchange:
Exchange of hardware at customers' premise the next business day, if the issue cannot be resolved remotely.

Installation Service with Network Setup:
Installation services that include onsite installation and network setup of printing product.

For carepack availability visit: hp.com/go/cpc

Top features

Stay ahead of schedule with this swift and versatile printer—up to 58 pages per minute (ppm).[3] Easily meet high-volume demands and provide flexible options for multiple users and paper sizes.

Business is mobile, and so is your workforce. Keep them covered—at their desk, on the way to the office, or stepping off a plane for an important meeting—with easy printing from mobile devices.[2]

Streamline fleet management—while giving workgroups the tools to support larger business initiatives. Extend print capabilities as business evolves, enhance security, and customize new solutions seamlessly.

Shrink your energy use while helping your company save money. This HP LaserJet Enterprise printer is designed for low energy consumption. Keep the printing process efficient and produce less waste.

Accessories
F2G68A - HP LaserJet 500-Sheet Input Tray Feeder
F2G69A - HP LaserJet Auto Duplexer Two Side Print
F2G70A - HP LaserJet Printer Stand
F2G72A - HP LaserJet 500-Sheet Stacker Stapler
F2G73A - HP LaserJet 1500-Sheet Input Tray
F2G74A - HP LaserJet 75-Sheet Envelope Feeder
F2G75A - HP LaserJet Custom Media Cassette Accessory
F2G81A - HP LaserJet 500-Sheet 5-Bin Mailbox
B5L28A - HP Two Internal USB Ports
B5L29A - HP Secure High Performance Hard Disk Drive
G6W84A - HP 1GB 90-Pin DDR3 Slim DIMM
F5S62A - HP Trusted Platform Module
Q3216A - HP 1000-staple Cartridge

Supplies
F2G76A - HP LaserJet Printer 110V Maintenance Kit (225K yield)
F2G77A - HP LaserJet Printer 220V Maintenance Kit (225K yield)
CF281A - HP 81A Black Original LaserJet Toner Cartridge (~10,500 pages)
CF281X - HP 81X High Yield Black Original LaserJet Toner Cartridge (~25,000 pages)

UC742E - Installation for 1 Network Configuration for Personal or Workgroup printer

[2] Local printing requires mobile device and printer be on the same network or have a direct wireless connection. Wireless performance is dependent on physical environment and distance from access point. Wireless operations are compatible with 2.4 GHz operations only. Remote printing requires an Internet connection to an HP Web-connected printer. App or software and HP ePrint account registration may also be required. Wireless broadband use requires separately purchased service contract for mobile devices. Check with service provider for coverage and availability in your area. See hp.com/go/mobileprinting for more details. Some features require purchase of an optional accessory, available Fall 2015. [3] Printing speed measured using ISO/IEC 24734 and excludes first set of test documents. For more information, see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity.

HP LaserJet Enterprise M605 series

Technical Specifications	HP LaserJet Enterprise M605n(E6B69A)	HP LaserJet Enterprise M605dn(E6B70A)	HP LaserJet Enterprise M605x(E6B71A)
AIO functions	Print		
Print speed	**Letter:** Up to 58 ppm black; [5]; **First Page Out Black:** As fast as 7 sec; [6]		
Print resolution	**Black (best):** Up to 1200 x 1200 dpi		
Print Technology	Laser; **Print Resolution Technologies:** HP ImageREt 3600 (600 x 600 dpi), HP ProRes 1200 (1200 x 1200 dpi)		
Print Cartridges Number	2 (black)		
Standard Print Languages	HP PCL 6, HP PCL 5e , HP Postscript Level 3 emulation, native PDF printing (v 1.7)		
Printer Smart Software Features	HP ePrint, Apple AirPrint, HP Auto-On/Auto-Off Technology, HP FutureSmart Firmware, Easy Access USB, Hardware Integration Pocket, Open Extensibility Platform, HP Web Jetadmin, HP Universal Print Driver, 4-line color display control panel		HP ePrint, Apple AirPrint, HP Auto-On/Auto-Off Technology, HP FutureSmart Firmware, Easy Access USB, Hardware Integration Pocket, Open Extensibility Platform, HP Web Jetadmin, HP Universal Print Driver, 4.3" color touchscreen control panel
Printer Management	Printer Administrator Resource Kit (Driver Configuration Utility, Driver Deployment Utility, Managed Printing Administrator); HP Web JetAdmin Software; HP Proxy Agent Software; HP Imaging and Printing Security Center; HP Utility (Mac)		
Standard Connectivity	Hi-Speed USB 2.0 ports (Host and Device); built-in Gigabit Ethernet 10/100/1000T network port; Hardware Integration Pocket (HIP)		
Network Capabilities	Via HP Jetdirect Ethernet embedded print server (standard) supports: 10Base-T, 100Base-Tx, 1000Base-T; 802.3az (EEE) support on Fast Ethernet and Gigabit Ethernet; IPsec (standard)		Embedded NFC/HP Wireless Direct support
Network Ready	Standard (built-in Gigabit Ethernet)		
Wireless Capability	Optional, enabled with purchase of a pending hardware accessory		Yes, embedded NFC/HP Wireless Direct support
Mobile Printing Capability	HP ePrint, Apple AirPrint™		HP ePrint, Apple AirPrint™, Touch-to-Print, Wireless Direct Printing
Memory	**Standard:** 512 MB; **Maximum:** 1.5 GB		
Mass Storage	4GB non-volatile storage, Firmware encryption (AES 128 or AES 256) of customer/job data; Secure Cryptographic Erase – Job Data, Secure Erase		
Processor Speed	1.2 GHz / **Hard disk:** Optional, 500 GB HP Secure High Performance Hard Disk Drive		
Duty Cycle	**Monthly, letter:** Up to 225,000 pages[7]; **Recommended Monthly Page Volume:** 5000 to 16,000[8]		
Paper Handling	**Input Capacities:** 100-sheet multipurpose tray 1, 500-sheet input tray 2; 500-sheet input tray 3 (M605x), Automatic duplexer for two-sided printing (M605dn, M605x); Up to 600 sheets standard labels legal; Up to 1100 standard labels legal(M605x); **Output Capacities:** 500-sheet output bin; 100-sheet rear output bin; Up to 600 sheets (500 in the face down bin, 100 in rear face up door) standard labels legal; **Duplex Options:** No (M605n); Yes (M605dn, M605x); **Envelope Feeder:** Yes, 75; **Standard Paper Trays:** 2; 3 (M605x); **Media Types Supported:** Paper (bond, color, letterhead, plain, preprinted, prepunched, recycled, rough, light), envelopes, labels, cardstock, transparencies, shelf edge labels, user-defined; **Media Weight Supported:** Multipurpose tray 1: 16 to 53 lb; Tray 2, optional 500-sheet input tray, optional Custom media cassette, optional 1500-sheet High-capacity input tray: 16 to 32 lb; Optional Envelope feeder: 20 to 28 lb; Optional Duplexer: 16 to 32 lb; **Media Sizes Supported:** Multipurpose tray 1: letter, legal, executive, statement, 8.5 x 13 in, 3 x 5 in, 4 x 6 in, 5 x 7 in, 5 x 8 in, envelope (commercial No. 9, No. 10, Monarch), US postcard; Tray 2, optional 500-sheet input tray: letter, legal, executive, 8.5 x 13 in; optional 1500-sheet High-capacity Input tray: letter, legal; **Media Sizes Custom:** Multipurpose tray 1: 3 x 5 to 8.5 x 14 in; Tray 2, optional 500-sheet input tray: 5.83 x 8.27 to 8.5 x 14 in; Optional Custom media cassette: 4.02 x 5.83 to 6.69 x 11.10 in		
Product Dimensions	**W x D x H:** 16.7 x 17.8 x 15.7 in; **Maximum:** 16.7 x 33 x 22.5 in	**W x D x H:** 16.7 x 21.1 x 15.7 in; **Maximum:** 16.7 x 33 x 22.5 in	**W x D x H:** 16.7 x 21.1 x 20.5 in; **Maximum:** 16.7 x 33 x 27.4 in
Product Weight	49.7 lb[1]	57 lb[1]	71.5 lb[1]
What's in the box	HP LaserJet M605; Pre-installed HP Black LaserJet Toner Cartridge; Installation guide, Support flyer; Printer documentation and software on CD-ROM; Power cord; Pre-installed HP Duplexer (dn, x models only)		
Warranty Features	One-year return to bench		
Energy Efficiency Compliance	CECP	Energy Star® certified; Blue Angel; CECP; EPEAT® Silver	
Control Panel	4-line color LCD display, 3 LED lights (Ready, Data, Attention), buttons (Information, Stop/Cancel, Return, Home, Folder, Clear), 10-key numeric keypad		4.3-in touch screen, LCD (color graphics); 1 Home button
Display Description	4-line LCD (color text and graphics)		4.3-in (10.9-cm) touchscreen LCD (color graphics)
Software Included	Windows OS: HP Software Installer/Uninstaller, HP PCL 6 Printer Driver, HP Device Experience (DXP), HP Update, Product Registration Assist, HP Web Services Assist (HP Connected), Online user manuals; Mac OS: Welcome Screen, (Directs users to HP.com or OS App Source for LaserJet Software), Setup Scan To Folder and Email		
Fonts and Typefaces	105 internal TrueType fonts scalable in HP PCL, 92 internal scalable fonts in HP postscript Level 3 emulation (Euro symbol built-in); 1 internal Unicode Fonts (Andale Mono WorldType); 2 Internal Windows Vista 8 Fonts (Calibri, Cambria); additional font solutions available via third-party flash memory cards; HP LaserJet Fonts and IPDS Emulation available at hp.com/go/laserjetfonts		
Compatible Operating Systems	Windows OS compatible with In-Box Driver: Windows XP SP3 all 32-bit editions (XP Home, XP Pro, etc.), Windows Vista all (32-bit) editions (Home Basic, Premium, Professional, etc.), Windows 7 all (32-bit, 64-bit) editions; Windows 8/8.1 all (32-bit, 64-bit) editions (excluding RT OS for Tablets), Windows 10 all (32-bit, 64-bit) editions (excluding RT OS for Tablets); Windows OS compatible with Universal Print Driver (From HP.com): Windows XP (SP3) (32-bit, 64-bit) editions (XP Home, XP Pro, etc.), Windows Vista all (32-bit, 64-bit) editions (Home Basic, Premium, Professional, etc.), Windows 7 all (32-bit, 64-bit) editions, Windows 8/8.1 all (32-bit, 64-bit) editions (excluding RT OS for Tablets), Windows 10 all (32-bit, 64-bit) editions (excluding RT OS for Tablets); Mac OS (HP Print Drivers available from HP.com and Apple Store): OS X 10.7 Lion, OS X 10.8 Mountain Lion, OS X 10.9 Mavericks, OS X 10.10 Yosemite; Mobile OS (In-OS drivers): iOS, Android, Windows 8/8.1/10 RT; Linux OS (In-OS HPLIP): SUSE Linux (12.2, 12.3, 13.1), Fedora (17, 18, 19, 20), Linux Mint (13, 14, 15, 16, 17), Boss (3.0, 5.0), Ubuntu (10.04, 11.10, 12.04, 12.10, 13.04, 13.10, 14.04, 14.10), Debian (6.0.x, 7.x); Other OS: UNIX[11]		
Compatible Network Operating Systems	Windows Server 2012 R2 (64-bit only), Windows Server 2012 Cluster Support (64-bit only), Windows Server 2012 (64-bit only), Windows Server 2008 Standard Edition Enterprise Edition (32-bit), Windows Server 2008 (SP2) (64-bit), Windows Server 2008 SP2 (32-bit),Windows Server 2008 Server Terminal Services (64-bit), Windows Server 2008 Server Terminal Services (32-bit), Windows Server 2008 R2 Standard Edition Enterprise Edition (64-bit only), Windows Server 2008 R2 (SP1) (64-bit only), Windows Server 2008 Enterprise Edition (64-bit), Windows Server 2003 Standard Edition (64-bit), Windows Server 2003 Standard Edition (32-bit), Windows Server 2003 R2 Standard Edition Enterprise Edition (64-bit), Windows Server 2003 R2 Standard Edition Enterprise Edition (32-bit), Windows Server 2003 Enterprise Edition (64-bit), Windows Server 2003 Enterprise Edition (32-bit), Windows Server 2003 2008 R2 - Cluster Support (64-bit), Windows Server 2003 2008 R2 - Cluster Support (32-bit), Windows Server 2003 2008 - Cluster Support (64-bit), Windows Server 2003 2008 - Cluster Support (32-bit), Citrix MetaFrame XP, Presentation Server Feature Release 1, 2, and 3 (32-bit, 64-bit), Citrix MetaFrame® Presentation Server 3.0, Citrix Microsoft Windows Server 2008 Terminal Services, Citrix MS Windows Server 2003 Terminal Services (32-bit, 64-bit), Citrix MS Windows Server 2008 R2 Terminal Services, Citrix MS Windows Server 2008 Terminal Services (32-bit, 64-bit), Citrix Presentation Server 4.0, Citrix Presentation Server 4.0 (32-bit, 64-bit), Citrix Presentation Server 4.5, Citrix Presentation Server™ 4.5, Citrix XenApp 5.0, Citrix XenApp 5.0, Citrix XenApp 5.0 Feature Pack 2 & 3 (32-bit, 64-bit), Citrix XenApp 5.0 Feature Pack 2 & 3 (32-bit, 64-bit), Citrix XenApp 6.0, Citrix XenApp 6.5, Citrix XenDesktop 5.6 (32-bit, 64-bit), HP-UX 10.20, 11.x, 11.i, IBM AIX 3.2.5 or higher, Linux Red Hat 7.x or higher, Linux SuSe 8.x or higher, Novell NetWare 6.5 (SP8) minimum for full Vista, Novell NetWare 6.5 (SP8) minimum for full Win7, Novell NetWare 6.5 SP8 minimum for full XP (SP7 if only XP), Novell iPrint Client v5.4 for Vista (x86 and x64), Novell iPrint Client v5.4 for Win7 (x86 and x64), Novell iPrint Client v5.4 for Win XP (x86 and x64), Novell Open Enterprise Server 2 (Linux), Solaris 2.5 or higher (SPARC systems only)		
Minimum System Requirements	**PC:** Windows XP (SP3) all 32-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32-bit editions (Home Basic, Premium, Professional, etc.), Windows 7 all 32-bit and 64-bit editions; Windows 8/8.1 all 32-bit and 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32-bit and 64-bit editions (excluding RT OS for Tablets); Windows OS compatible with Universal Print Driver (From HP.com): Windows XP (SP3) 32-bit and 64-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32-bit and 64-bit editions (Home Basic, Premium, Professional, etc.), Windows 7 all 32-bit and 64-bit editions, Windows 8/8.1 all 32-bit and 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32-bit and 64-bit editions (excluding RT OS for Tablets); Mobile OS (In-OS drivers): Android, Windows 8/8.1/10 RT; Linux OS (In-OS HPLIP): SUSE Linux (12.2, 12.3, 13.1), Fedora (17, 18, 19, 20), Linux Mint (13, 14, 15, 16, 17), Boss (3.0, 5.0), Ubuntu (10.04, 11.10, 12.04, 12.10, 13.04, 13.10, 14.04, 14.10), Debian (6.0.x, 7.x); Other OS: UNIX; CD-ROM or DVD drive, or Internet connection; Dedicated USB or network connection or Wireless connection; 200 MB available hard disk space; OS compatible hardware (For OS hardware requirements see microsoft.com); **MAC:** Mac OS X 10.7 Lion, OS X 10.8 Mountain Lion, OS X 10.9 Mavericks, OS X 10.10 Yosemite; USB; 1 GB available hard disk space; OS compatible hardware (For OS hardware requirements see apple.com)		
Power	**Power Supply Type:** Internal (Built-in) power supply; **Power Requirements:** 110-volt input voltage: 100 to 127 VAC (+/- 10%), 50/60 Hz (+/- 3 Hz); 220-volt input voltage: 220 to 240 VAC (+/- 10%), 50/60 Hz (+/- 3 Hz) (Not dual voltage, product varies by part number with # Option code identifier); **Power Consumption:** 840 watts (Printing), 3.7 watts (Sleep), <0.1 watts (Manual Off), 0.7 watts (Auto-Off/Wake on LAN), <0.1 watts (Auto-Off/Manual On)[2]		
Acoustics	**Acoustic Power Emissions:** 7.1 B(A); **Acoustic Pressure Emissions:** 56 dB(A)[4]		
Operating Environment	**Operating Temperature Range:** 59 to 89.6ºF; **Recommended Operating Temperature:** 59 to 89.6ºF; **Storage Temperature Range:** -22 to 140ºF; **Non-Operating Humidity Range:** 10 to 90% RH; **Operating Humidity Range:** 10 to 80% RH; **Recommended Humidity Operating Range:** 10 to 80% RH		
Security Management	Identity management: Kerberos authentication, LDAP authentication, 1000 user PIN codes, optional HP and 3rd party advanced authentication solutions (e.g., badge readers); Network: IPsec/firewall with Certificate, Pre-Shared Key, and Kerberos authentication, Supports WJA-10 IPsec configuration Plug-in, 802.1X authentication (EAP-PEAP, EAP-TLS), SNMPv3, HTTPS, Certificates, Access Control List; Data: Storage Encryption, Encrypted PDF & Email (uses FIPS 140 validated cryptographic libraries from Microsoft), Secure Erase, SSL/TLS (HTTPS), Encrypted Credentials; Device: Security lock slot, USB port disablement, hardware integration pocket for security solutions; Security management: Compatible with HP Imaging and Printing Security Center		

[1] With cartridges [2] Power requirements are based on the country/region where the printer is sold. Do not convert operating voltages. This will damage the printer and void the product warranty. [3] Declared yield value in accordance with ISO/IEC 19752 and continuous printing. Actual yields vary considerably based on images printed and other factors. For details see hp.com/go/learnaboutsupplies. [4] Acoustic values are subject to change. For current information see hp.com/support. Configuration tested: M604dn, simplex printing, A4 paper at an average of 50 ppm. [5] Measured using ISO/IEC 24734, excludes first set of test documents. For more information, see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity. [6] Measured using ISO/IEC 17629. For more information, see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity. [7] Duty cycle is defined as the maximum number of pages per month of imaged output. This value provides a comparison of product robustness in relation to other HP LaserJet or HP Color LaserJet devices, and enables appropriate deployment of printers and MFPs to satisfy the demands of connected individuals or groups. [8] HP recommends that the number of printed pages per month be within the stated range for optimum device performance, based on factors including supplies replacement intervals and device life over an extended warranty period. [9] HP SureSupply alerts you when your print cartridge is running low and helps you purchase online or locally through HP or a participating retailer. Only available with Original HP supplies; Internet access required. To learn more, visit hp.com/go/SureSupply. [10] Paper handling accessories are offered separately and with an additional cost. To insure product stability, it is a requirement to purchase the HP LaserJet P4010/P4510/600 Series Printer Stand (F2G70A) when using M604/M605/M606 Printers with more than three HP LaserJet 500-sheet Input Tray Feeders (CE998A), or with one HP LaserJet 1500-sheet Input Tray (CE398A) and more than one HP LaserJet 500-sheet Input Tray Feeder (CE998A). [11] Not all Compatible Operating Systems are supported with In-box software. Full solution software available only for Windows 7 and newer. Legacy Windows Operation Systems (XP, Vista, and equivalent servers) get print and Scan drivers only. Windows RT OS for Tablets (32-bit, 64-bit) uses a simplified HP print driver built into the RT OS. UNIX modelscripts are available on hp.com (Modelscripts are printer drivers for UNIX operating systems). Linux systems use in-OS HPLIP software.

Specification Coversheet

Description: Printer, Laser, Multifunction

Manufacturer: Hewlett-Packard (650-857-1501)

Vendor: Hewlett-Packard (650-857-1501)

Model: Color LaserJet Enterprise MFP M577f

Alt ID: PRT-MFC

Mfr #: B5L47A#BGJ

Vendor #: B5L47A#BGJ

Item ID:

Color Multifunction laser printer. Scan, print, copy, fax and mobile printing capability (HP ePrint; Apple AirPrint; Mopria-certified; Google Cloud Print 2.0). Features Print speed, color (normal) Up to 40 ppm. 100-sheet multipurpose tray 1, 550-sheet tray 2. Ports 2 Hi-Speed USB 2.0 Host, 1 Hi-Speed USB 2.0 Device, 1 Gigabit/Fast Ethernet 10/100/1000 Base-TX network, 1 Hardware Integration Pocket, 1 Fax. (8) inch color touchscreen. 1.2 GHz processor speed. Number of print cartridges 4 (1 each black, cyan, magenta, yellow). Energy Star qualified. FCC Class A emissions - for use in commercial environments, not residential environments.

Data sheet

HP Color LaserJet Enterprise MFP M577 series

Conserve energy and boost productivity with an MFP that delivers multi-level device security.[10]

Ideal for enterprises and medium businesses that need a secure, highly productive, energy-efficient color MFP.

HP Color LaserJet Enterprise MFP M577dn

HP Color LaserJet Enterprise MFP M577f

HP Color LaserJet Enterprise Flow MFP M577c

HP Color LaserJet Enterprise Flow MFP M577z

High-speed performance meets energy efficiency

- Don't wait for documents. Print your first page in as few as 9 seconds from energy-efficient sleep mode.[2]
- Speed through jobs. Print two sides as quickly as one—up to 40 ipm[9]—and scan both sides of the page at once.
- This MFP uses exceptionally low amounts of energy—thanks to its innovative design and toner technology.[3]
- Choose a maximum capacity of up to 2300 sheets.[8] Print up to 59 pages per minute on A5.[9]

Unparalleled fleet security and management

- Embedded features detect security threats and heal your MFP, protecting it from boot up to shutdown.[10]
- Protect sensitive data on the MFP and in transit, using embedded security features and 256-bit encryption.[10]
- Protect sensitive business data with embedded and optional HP JetAdvantage Security Solutions.[11]
- Centralize control of your printing environment with HP Web Jetadmin—and help build business efficiency.[12]

More. Pages, Performance, and Protection.

- Make an impression with leading color quality from HP. Get unparalleled printing for your office needs.
- Get more pages with each Original HP Toner cartridge with JetIntelligence and high-yield cartridges.[113]
- Help ensure the Original HP quality you paid for with anti-fraud and cartridge authentication technology.
- Print right away with preinstalled toner cartridges. Replace them with cartridges featuring auto seal removal.

Stay connected with secure mobile printing options

- Enable 128-bit encrypted wireless direct printing from mobile devices—without accessing the network.[5]
- Print with just a touch of your NFC-enabled mobile device to this printer—no network needed.[6]
- Easily print from a variety of smartphones and tablets—generally no setup or apps required.[7]
- Easily access, print, and share resources with Ethernet and optional wireless networking.[4]

[1] More pages versus predecessor cartridges claim based on page-yield comparison of HP 507A High Yield Original LaserJet Toner Cartridges with HP 508X High Yield Original LaserJet Toner Cartridges. For more information, see http://www.hp.com/go/learnaboutsupplies

[2] Based on HP internal testing of top three leading competitors' first page out from sleep mode and duplex print and copy speed completed 8/2015. Subject to device settings. Actual results may vary. For details, see http://www.hp.com/go/Ljclaims

[3] Based on HP testing using the ENERGY STAR® program's Typical Electricity Consumption (TEC) method or as reported in energystar.gov versus the top three leading competitors as of 8/2015. Actual results may vary. For details see http://www.hp.com/go/Ljclaims

[4] Wireless networking requires purchase of the HP Jetdirect 2900nw Print Server. Wireless performance is dependent on physical environment and distance from access point, and may be limited during active VPN connections.

[5] Wireless direct printing is standard on the HP Color LaserJet Enterprise MFP M577z only. Requires purchase of optional HP Jetdirect 3000w NFC/Wireless Direct Accessory for the HP Color LaserJet Enterprise MFP M577dn/f/c. Mobile device needs to be connected directly to the Wi-Fi network of a wireless direct–capable MFP or printer prior to printing. Depending on mobile device, an app or driver may also be required. Wireless performance is dependent on physical environment and distance from the access point in the MFP or printer. For details, see http://www.hp.com/go/businessmobileprinting

[6] Touch-to-print capability is standard on the HP Color LaserJet Enterprise MFP M577z only. Requires purchase of optional HP Jetdirect 3000w NFC/Wireless Direct Accessory for the HP Color LaserJet Enterprise MFP M577dn/f/c. Mobile device must support Near Field Communication (NFC)–enabled printing. For more information, see http://www.hp.com/go/businessmobileprinting

[7] Wireless operations are compatible with 2.4 GHz operations only. App or software and HP ePrint account registration may also be required. Some features require purchase of an optional accessory. Learn more at http://www.hp.com/go/mobileprinting

[8] Purchase of optional paper trays required to reach maximum input capacity.

[9] Measured using ISO/IEC 24734 and excludes first set of test documents. For more information, see http://www.hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity.

[10] Some features require additional purchase. A FutureSmart service pack update may be required to activate security features. Learn more at http://www.hp.com/go/printsecurity

[11] Some solutions require download or additional purchase. Learn more at http://www.hp.com/go/printingsolutions

[12] Universal device plug-in is offered with HP Web Jetadmin 10.3 SR4 and higher. HP Web Jetadmin is free and available for download at http://www.hp.com/go/webjetadmin

[13] HP 508X High Yield Original LaserJet Toner Cartridges not included; please purchase separately.

[14] An FCC Class A emissions compliant device meets the less stringent (higher) levels of emissions allowed by the FCC for a product operation in a commercial environment. An FCC class A device cannot be marketed for use in a residential environment and an FCC class A device should not be purchased for use in a residential environment due to the increased risk of interference to radio communications.

Product walkaround

1. Intuitive 8-inch (20.3 cm) color touchscreen tilts up for easier viewing
2. Convenience stapler
3. Pull-out keyboard for easy, accurate data entry
4. Convenient front on/off button
5. Right door (access to print path)
6. 100-sheet multipurpose tray
7. 550-sheet input tray 2
8. 100-sheet ADF with single-pass, two-sided scanning and HP EveryPage
9. Hardware Integration Pocket[1] (for connecting accessory and third-party devices)
10. Easy-access USB port to save and print files directly[2]
11. Built-in wireless direct Printing[3]/NFC touch-to-print[4]
12. 250-sheet output bin
13. Front door (access to HP JetIntelligence Toner cartridges)
14. Built-in automatic two-sided printing
15. 1.75 GB standard memory (upgradeable to 2.5 GB) and a 1.2 GHz processor
16. HP High-Performance Secure Hard Disk
17. Fax port
18. HP Jetdirect Gigabit Ethernet print server
19. Slot for optional cable-type security lock
20. Hi-Speed USB 2.0 port (for connecting third-party devices)
21. Hi-Speed USB 2.0 printing port

[1] Solutions deployed through the Hardware Integration Pocket may require additional purchase.
[2] An administrator must enable the easy-access USB port before use.
[3] Wireless direct printing is standard on the HP Color LaserJet Enterprise MFP M577z only. Requires purchase of optional HP Jetdirect 3000w NFC/Wireless Direct Accessory for the HP Color LaserJet Enterprise MFP M577dn/f/c. Mobile device needs to be connected directly to the Wi-Fi network of a wireless direct-capable MFP or printer prior to printing. Depending on mobile device, an app or driver may also be required. Wireless performance is dependent on physical environment and distance from the access point in the MFP or printer. For details, see hp.com/go/businessmobileprinting.
[4] Touch-to-print capability is standard on the HP Color LaserJet Enterprise MFP M577z only. Requires purchase of optional HP Jetdirect 3000w NFC/Wireless Direct Accessory for the HP Color LaserJet Enterprise MFP M577dn/f/c. Mobile device must support Near Field Communication (NFC)-enabled printing. For more information, see hp.com/go/businessmobileprinting.

HP Services

Downtime can have serious consequences, so HP provides support beyond the standard warranty. You benefit from reduced risk, maximized uptime, predictable service delivery and no unbudgeted repair costs. HP Care Pack Services provide a comprehensive suite of protection services designed to keep HP hardware and software up and running so employees can stay productive.

For carepack availability visit: hp.com/go/cpc:

Top features

This efficient MFP is designed to conserve energy without sacrificing productivity—so users can speed through tasks and move business forward. It also uses exceptionally low amounts of energy—thanks to its innovative design and toner technology.[3]

Trust your MFP is secure from power-up to power-down. Get strong protection for devices, data, and documents with embedded and optional security features while centrally managing your entire fleet.[10]

Bring out the best in your MFP. Print more high-quality pages than ever before,[1] using specially designed Original HP Toner cartridges with JetIntelligence. Count on the authentic HP quality you paid for—something the competition can't match.

Enable secure wireless printing in the office—with or without network access[5]—and keep users connected with Ethernet and optional wireless networking.[4] Print with just a touch from mobile devices.[6]

Copy				
Copy speed[2 1]	**Black (ISO):** Up to 38 cpm; **Color (ISO):** Up to 38 cpm; **First copy out:** As fast as 5.4 sec Black; As fast as 8.7 sec Color; **2-sided:** Up to 40 cpm Black; Up to 40 cpm Color		**Black (ISO):** Up to 38 cpm; **Color (ISO):** Up to 38 cpm; **First copy out:** As fast as 5.5 sec Black; As fast as 8.7 sec Color; **2-sided:** Up to 40 cpm Black; Up to 40 cpm Color	
Copy resolution	**Black (text and graphics):** Up to 600 x 600 dpi; **Color (text and graphics):** Up to 600 x 600 dpi			
Maximum Number of Copies	Up to 9999 copies			
Copier resize	25 to 400%			
Copier settings	Two-sided copying; Scalability; Image adjustments (darkness, contrast, background cleanup, sharpness); N-up; N or Z-ordering; Content orientation; Collation; Booklet; Job build; Edge-to-edge; Job storage; ID Copy; Book Copy; A-to-B Copy (different media sizes)			
Fax				
Fax speed		**Up to:** 33.6 kbps / **Letter:** 3 sec per page		
Fax resolution		**Black (best):** Up to 300 x 300 dpi (400 x 400 dpi for received faxes only); **Black (standard):** 204 x 98 dpi		
Fax smart software features		Stored faxes; Fax archiving; Fax forwarding; Scale to fit; Fax address book; LAN/Internet fax; Fax number confirmation; Holiday fax schedule		
Fax Features		**Auto fax reduction supported:** Yes; **Auto-redialing:** Yes; **Fax delayed sending:** No; **Distinctive ring detection supported:** No; **Fax forwarding supported:** Yes; **Fax phone TAM interface supported:** No; **Fax polling supported:** Yes (poll to receive only); **Fax telephone mode supported:** No; **Junk barrier supported:** Yes; **Maximum speed dialing numbers:** Up to 1000 numbers (each with 210 destinations); **PC interface supported:** Yes; **Remote retrieval capability supported:** No; **Telephone handset supported:** No		
Connectivity				
Standard connectivity	2 Hi-Speed USB 2.0 Host; 1 Hi-Speed USB 2.0 Device; 1 Gigabit/Fast Ethernet 10/100/1000Base-TX network; Hardware Integration Pocket	2 Hi-Speed USB 2.0 Host; 1 Hi-Speed USB 2.0 Device; 1 Gigabit/Fast Ethernet 10/100/1000Base-TX network; Hardware Integration Pocket; Fax		
Network capabilities	Yes, via HP Jetdirect Ethernet embedded print server (standard) supports: 10Base-T, 100Base-Tx, 1000Base-T; 802.3az (EEE) support on Fast Ethernet and Gigabit Ethernet; IPsec (standard)			
Wireless capability	Optional, enabled with purchase of hardware accessory.			Yes, built-in Gigabit Ethernet, Wi-Fi 802.11b/g/n
Mobile printing capability	HP ePrint; Apple AirPrint™; Mopria™-certified; Google Cloud Print 2.0			HP ePrint; Apple AirPrint™; Mopria™-certified; NFC Touch-to-print; Wireless Direct Printing; Google Cloud Print 2.0
Memory[8]	**Standard:** 1.25 GB (printer), 500 MB (scanner); **Maximum:** 2.0 GB (printer), 500 MB (scanner)			
Processor speed	1.2 GHz / **Hard disk:** Standard, embedded HP High-Performance Secure Hard Disk, minimum 320 GB; AES 256 hardware encryption or greater; Secure erase capabilities (Secure File Erase-Temporary Job Files, Secure Erase-Job Data, Secure ATA Erase-Disk); U.S. Government: Standard, FIPS 140-2 validated hard disk, minimum 500 GB			
Duty cycle (monthly)[9]	**Letter:** Up to 80,000 pages; **Recommended monthly page volume[10]:** 2000 to 7500			
Paper handling				
Input	100-sheet multipurpose tray, 550-sheet input tray 2; Up to 650 sheets Standard; Up to 10 envelopes			
Output	250-sheet output bin; Up to 250 sheets Standard; Up to 100 sheets	250-sheet output bin, convenience stapler; Up to 250 sheets Standard; Up to 100 sheets		
Duplex Options	Automatic (standard)			
Auto document feeder capacity	Standard, 100 sheets			
Envelope feeder	No			
Standard paper trays	2			
Media types	Paper (plain, light, bond, recycled, mid-weight, heavy, mid-weight glossy, heavy glossy, extra heavy, extra heavy glossy, cardstock, card glossy), color transparency, labels, letterhead, envelope, preprinted, prepunched, colored, rough, opaque film, user-defined			
Media weight	Tray 1: 16 to 58 lb (plain); 28 to 58 lb (glossy); Tray 2: 16 to 58 lb (plain paper); 28 to 58 lb (glossy paper); Optional Trays 3+: 16 to 58 lb (plain paper); 28 to 58 lb (glossy paper)			
Media sizes	Tray 1: letter, legal, oficio, executive, statement, 4 x 6, 3 x 5, 5 x 7, 5 x 8, postcard (JIS), double postcard (JIS), 8.5 x 13, envelope (commercial No. 9, No. 10, Monarch); Custom: 3 x 5 to 8.5 x 14 in; Tray 2: letter, executive, statement, 4 x 6, 5 x 7, 5 x 8, double postcard (JIS); Custom: 4.0 x 5.85 to 8.5 x 11.69 in; Optional Trays 3+: letter, legal, oficio, executive, 8.5 x 13; Custom: 4.0 x 5.85 to 8.5 x 14 in			
Media Sizes Custom	Tray 1: 3 x 5 to 8.5 x 14 in; Tray 2: 4.0 x 5.85 to 8.5 x 11.69 in; Optional Trays 3+: 4.0 x 5.85 to 8.5 x 14 in			
Dimensions (w x d x h)[2]	18.98 x 19.84 x 22.95 in; **Maximum:** 27.5 x 19.84 x 22.95 in			
Weight[3]	84 lb	84.5 lb	85 lb	
What's in the box[1]	Printer; Four preinstalled HP LaserJet toner cartridges (yield ~6000 pages black, ~5000 pages color); Toner collection unit; In-box documentation; Software CD; Power Cord	Printer; Four preinstalled HP LaserJet toner cartridges (Black: ~6000 pages, Color: ~5000 pages); Toner collection unit; In-box documentation; Software CD; Power Cord; fax cable		Printer; Four preinstalled HP LaserJet toner cartridges (Black: ~6000 pages , Color: ~5000 pages); Toner collection unit; In-box documentation; Software CD; Power Cord; fax cable
Warranty features	One-year, next-business day, onsite warranty. Warranty and support options vary by product, country and local legal requirements. Go to http://www.hp.com/support to learn about HP award winning service and support options in your region.			
Energy efficiency compliance	ENERGY STAR® qualified; EPEAT® Silver, CECP			ENERGY STAR® qualified; EPEAT® Silver; CECP
Control panel	8.0-in (20.3 cm) color touchscreen; adjustable angle display with gesturing; illuminated Home button (for quick return to the Home menu)		8.0-in (20.3 cm) color touchscreen; adjustable angle display with gesturing; illuminated Home button (for quick return to the Home menu) and integrated keyboard	
Display	8" color touchscreen			
Software included	For Windows OS; HP Software Installer/Uninstaller, HP PCL 6 Printer Driver, HP Device Experience (DXP), HP Send Fax, HP Update, Product Registration Assist, HP Web Services Assist (HP Connected), Online user manuals; For Mac OS; Welcome Screen, (Directs users to HP.com or OS App Source for LaserJet Software)

Compatible operating systems[1 3]	Windows OS compatible with In-Box Driver; Windows XP SP3 all 32-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32-bit editions (Home Basic, Premium, Professional, etc.), Windows 7 all 32- & 64-bit editions, Windows 8/8.1 all 32- & 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32- & 64-bit editions (excluding RT OS for Tablets); Windows OS compatible with Universal Print Driver (From HP.com); Windows XP SP3 32- & 64-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32- & 64-bit editions (Home Basic, Premium, Professional, etc.),Windows 7 all 32- & 64-bit editions, Windows 8/8.1 all 32- & 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32- & 64-bit editions (excluding RT OS for Tablets); Mac OS (HP Print Drivers available from HP.com and Apple Store); OS X 10.8 Mountain Lion,OS X 10.9 Mavericks, OS X 10.10 Yosemite; Mobile OS (In-OS drivers); iOS, Android, Windows 8/8.1/10 RT; Linux OS (In-OS HPLIP; SUSE Linux (12.2, 12.3, 13.1), Fedora (17, 18, 19, 20), Linux Mint (13, 14, 15, 16, 17), Boss (3.0, 5.0), Ubuntu (10.04, 11.10, 12.04, 12.10, 13.04, 13.10, 14.04, 14.10), Debian (6.0.x, 7.x); Other OS; UNIX			
Compatible network operating systems	Windows OS compatible with In-Box Driver; Windows Server 2003/2003 R2 32-bit (SP1/SP2) Standard/Enterprise (+ Cluster & Terminal Services), Windows Server 2008 32-/64-bit (SP2) Standard/Enterprise (+ Cluster & Terminal Services), Windows Server 2008 R2 64-bit (SP1) Standard/Enterprise (+ Cluster & Terminal Services ;Windows OS compatible with Universal Print Driver (UPD) or Product-Specific drivers from HP.com; Windows Server 2003/2003 R2 32-/64-bit (SP1/SP2) Standard/Enterprise/Datacenter (+ Cluster & Terminal Services), Windows Server 2008/2008 R2 32-/64-bit (SP1/SP2) Standard/Enterprise/Datacenter (+ Cluster & Terminal Services), Windows Server 2012/2012 R2 64-bit Standard/Foundation/Essentials/Datacenter (+ Cluster & Terminal Services) ;Citrix (on Windows Server 2003/2003R2), Citrix MetaFrame Presentation Server, 3.0, Citrix MetaFrame XP Presentation Server (Feature Release 1, 2, and 3), Citrix Presentation Server 4.0/4.5, Citrix XenApp 5.0 (Plus Feature Pack 2 & 3), Citrix (on Windows Server 2008/2008R2, Citrix XenApp 5.0 (Plus Feature Pack 2 & 3), Citrix XenApp 6.0/6.5/7.5, Citrix XenDesktop 5.6/7.0/7.5 ,Citrix (on Windows Server 2012/2012R2, Citrix XenApp 7.5, Citrix XenDesktop 7.0/7.5 ;Novell Servers; www.novell.com/iprint), Novell iPrint Appliance v1.0, Novell Open Enterprise Server 11/SP1, Novell Open Enterprise Server 2 for Linux, NetWare 6.5/SP8, Novell Clients (www.novell.com/iprint; Windows 8 (32-bit / 64-bit) recommend v5.86+, 8.1 recommend v5.94+, Windows 7 (32-bit / 64-bit) recommend v5.82+, Windows Vista (32-bit / 64-bit) recommend v5.82+, Windows XP / SP3 (32-bit only) recommend v5.82+ ?			
Minimum system requirements	**PC:** Windows XP SP3 all 32-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32-bit editions (Home Basic, Premium, Professional, etc.), Windows 7 all 32- & 64-bit editions, Windows 8/8.1 all 32- & 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32- & 64-bit editions (excluding RT OS for Tablets); Windows OS compatible with Universal Print Driver (From HP.com); Windows XP SP3 32- & 64-bit editions (XP Home, XP Pro, etc.), Windows Vista all 32- & 64-bit editions (Home Basic, Premium, Professional, etc.),Windows 7 all 32- & 64-bit editions, Windows 8/8.1 all 32- & 64-bit editions (excluding RT OS for Tablets), Windows 10 all 32- & 64-bit editions (excluding RT OS for Tablets); CD-ROM or DVD drive, or Internet connection; Dedicated USB or network connection or Wireless connection; 200 MB available hard disk space; OS compatible hardware (For OS hardware requirements see http://www.microsoft.com); **Mac:** Mac OS (HP Print Drivers available from HP.com and Apple Store); OS X 10.8 Mountain Lion,OS X 10.9 Mavericks, OS X 10.10 Yosemite; Internet; USB; 1 GB HD; OS compatible hardware (For OS hardware requirements see http://www.apple.com)			
Power[5 19]	**Power supply type:** Internal (Built-in) power supply; **Power supply required:** Input voltage: 100 to 127 VAC, 60 Hz, Input voltage: 200 to 240 VAC, 50 Hz (Not dual voltage, product varies by part number with # Option code identifier); **Power consumption[4]:** 592 watts (Printing), 47.3 watts (Ready), 3.48 watts (Sleep), 0.08 watts (Auto-Off/Manual On), 0.49 watts (Auto-Off/Auto-On/Wake on LAN); **Typical electricity consumption (TEC) number:** 1.58 kWh/Week (Energy Star), 1.51 kWh/Week (Blue Angel); **Best technical electricity consumption (TEC):** 1.52 kWh/Week			
Acoustics	**Acoustic power emissions:** 6.5 B(A) (printing at 38 ppm)			
Operating environment	**Operating temperature range:** 59 to 86°F ; **Recommended operating temperature:** 62 to 77°F ; **Storage temperature range:** 32 to 95°F ; **Operating humidity range:** 10 to 80% RH ; **Recommended operating humidity range:** 30 to 70% RH			
Security management	Identity management: Kerberos authentication, LDAP authentication, 1000 user PIN codes, optional HP and 3rd party advanced authentication solutions (e.g., badge readers); Network: IPsec/firewall with Certificate, Pre-Shared Key, and Kerberos authentication, Supports WJA-10 IPsec configuration Plug-in, 802.1X authentication (EAP-PEAP, EAP-TLS), SNMPv3, HTTPS, Certificates, Access Control List; Data: Storage Encryption, Encrypted PDF & Email (uses FIPS 140-2 validated cryptographic libraries), Secure Erase, SSL/TLS (HTTPS), Encrypted Credentials; Device: Security lock slot, USB port disablement, hardware integration pocket for security solutions, optional Trusted Platform Module; Security management: Compatible with optional HP JetAdvantage Security Manager			

[1] Toner cartridge yields established using ISO/IEC test standards. Actual yields and costs vary considerably depending on images printed, number of color pages printed, and other factors.
[2] Without Tray 1 or Legal extension extended
[3] With printer cartridges
[4] Power requirements are based on the country/region where the printer is sold. Do not convert operating voltages. This will damage the printer and void the product warranty.
[5] Typical Electricity Consumption (TEC) rating represents the typical electricity consumed by a product during 1 week, measured in kilowatt-hours (kWh).
[6] Average color composite (C/M/Y) and black declared yields based on ISO/IEC 19798 and continuous printing. Actual yields vary considerably based on images printed and other factors. For details see http://www.hp.com/go/learnaboutSupportlies
[7] HP SureSupply alerts you when your print cartridge is running low and helps you purchase online or locally through HP or a participating retailer. Only available with Original HP supplies; Internet access required. To learn more, visit http://www.hp.com/go/SureSupply
[8] Max memory is with 1 GB DIMM installed. The maximum the Firmware can use is 2 GB so 250 MB is unused in this configuration.
[9] Duty cycle is defined as the maximum number of pages per month of imaged output. This value provides a comparison of product robustness in relation to other HP LaserJet or HP Color LaserJet devices, and enables appropriate deployment of printers and MFPs to satisfy the demands of connected individuals or groups.
[10] HP recommends that the number of pages per month of imaged output be within the stated range for optimum device performance, based on factors including supplies replacement intervals and device life over an extended warranty period.
[11] Measured using ISO/IEC 24734, excludes first set of test documents. For more information see http://www.hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity.
[12] HP recommends that the number of scanned pages per month be within the stated range for optimum device performance.
[13] Not all "Compatible Operating Systems" are supported with INBOX software; Full solution software available only for Windows 7 and newer; Legacy Windows Operating Systems (XP, Vista, and equivilant servers) get print and Scan drivers only; Windows RT OS for Tablets (32- & 64-bit) uses a simplified HP print driver built into the RT OS; UNIX modelscripts are available on HP.com (Modelscripts are printer drivers for UNIX operating systems); Linux systems use in-OS HPLIP software.

KONICA MINOLTA

TECHNOLOGY

bizhub® 558e

MONOCHROME MID-VOLUME MULTIFUNCTION PRINTER

- Up to 55 ppm print/copy output to keep pace with rising demands
- Standard dual scanning up to 240 originals per minute
- High capacity 300-sheet document feeder
- Large 9" color display with quick tablet-like touchscreen interface
- 3rd-party software integration with standard web browser
- Built-in Emperon® print system, universal printer drivers
- Simitri® HD polymerized toner for high-resolution imaging
- Standard 250 GB HDD for on-board document storage
- Meets ISO 15408 and IEEE 2600.1 Security standards*
- Standard web browser, 4 GB of memory
- Power-saving design with quick recovery from sleep mode
- 6,650-sheet maximum capacity, tab printing support, carbon-copy printing
- Advanced authentication, secure print release, remote firmware updates
- Multiple bypass tray and detachable paper feed trays improve paper handling
- Finishing options for 80-page booklet-making, up to 100-sheet stapling
- Options for 2/3-hole punch, tri-fold, 2-fold, post-insertion and more
- Downloadable apps to help you work faster and smarter
- Multiple i-Options to suit the needs of your workflow
- EPEAT Gold-certified, low power consumption to cut costs
- Mobile printing support (AirPrint, Google Cloud Print Classic, NFC)

*May not be available at time of launch.

bizhub 558e

MONOCHROME MID-VOLUME MULTIFUNCTION PRINTER

The bizhub 558e presents the perfect solution for professional digitization of documents, thanks to the reliable high-capacity standard dual scan document feeder. Combined with the enhanced options for flexibility and security, it adapts precisely to customers' requirements and can easily be integrated into new working styles and any conceivable workflow.

SYSTEM OVERVIEW

System memory	4 GB
System hard disk	250 GB Standard
Interface	10-Base-T / 100-Base-TX / 1,000-Base-T Ethernet, USB 2.0
Network protocols	TCP/IP (IPv4/IPv6), FTP, SMB v2, SMTP, WebDAV
Frame types	Ethernet 802.2, Ethernet 802.3, Ethernet II, Ethernet SNAP
Document feeder	Up to 300 originals / 5.5" x 8.5" to 11" x 17" / 35–210 gsm Dual scan document feeder
Printable paper size	**Scanning/Copying:** up to 11" x 17" **Printing:** up to 11" x 17" full bleed on 12" x 18" paper Custom paper sizes Banner paper max.: 11.75" x 47.25"
Printable paper weight	52–300 gsm
Paper input capacity	**Standard:** 1,150 sheets / **Max.:** 6,650 sheets
Tray 1	500 sheets / 5.5" x 8.5" to 11" x 17" / 52–256 gsm
Tray 2	500 sheets / 5.5" x 8.5" to 12" x 18" / 52–256 gsm
Tray 3 (optional)	500 sheets / 5.5" x 8.5" to 11" x 17" / 52–256 gsm
Tray 4 (optional)	2 x 500 sheets / 5.5" x 8.5" to 8.5" x 11" / 52–256 gsm
Large capacity tray LU-207 (optional)	2,500 sheets / 8.5" x 11" to 12" x 18" / 52–256 gsm
Large capacity tray LU-302 (optional)	3,000 sheets / 8.5" x 11" / 52–256 gsm
Large capacity tray PC-415 (optional)	2,500 sheets / 8.5" x 11" / 52–256 gsm
Manual bypass	150 sheets / 4" x 6" to 12" x 18" / custom paper sizes / 50–300 gsm
Automatic duplexing	5.5" x 8.5" to 12" x 18" / 52–256 gsm
Finishing modes	Offset, group, staple, sort, punch, half-fold, z-fold, tri-fold, post-insertion, booklet
Output capacity	**Max. with finisher:** 3,200 sheets **Max. without finisher:** 250 sheets
Stapling (optional)	**Max.:** 100 sheets or 94 sheets + 2 cover sheets (up to 209 gsm)
Stapling output capacity	**Max.:** 1,000 sheets
Tri-fold (optional)	Up to 3 sheets
Tri-fold capacity	**Max.:** 30 sheets (tray)
Booklet (optional)	**Max.:** 20 sheets or 19 sheets + 1 cover sheet (up to 209 gsm)
Booklet output capacity	**Max.:** 100 sheets (tray)
Copy/print volume	**Max.:** 250,000 pages/month[1]
Toner lifetime	26,000 pages
Imaging unit lifetime	285,000 pages / 600,000 pages (Drum/Developer)
Power consumption	120 V / 60 Hz, less than 0.5 kW (system)
System dimensions	24.2" x 27" x 38" (W x D x H)
System weight	Approx. 211.64 lb

PRINTER SPECIFICATIONS

Print resolution	1,800 (equivalent) x 600 dpi, 1,200 x 1,200 dpi
PDL	PCL6 (XL 3.0), PCL5c, PostScript 3 (ver. 3016), XPS
Operating systems	Windows (x32/x64): Vista / 7 / 8.1 / 10 Windows Server (x32/x64): 2008 / 2008 R2[2] / 2012[3] Macintosh OS X 10.7 or later Red Hat Enterprise Linux
Printer fonts	80 PCL Latin, 137 PostScript 3
Print functions	Direct Print of PCL, PS, TIFF, XPS, PDF, encrypted PDF files and OOXML (DOCX, XLSX, PPTX), mixmedia and mixplex, "Easy Set" job programming, overlay, watermark, copy protection, carbon copy print

COPIER SPECIFICATIONS

Copying process	Electrostatic laser copy, tandem, indirect
Toner system	Simitri HD Polymerized Toner
Print speed (8.5" x 11")	Up to 55 ppm (portrait)
Print speed (11" x 17")	Up to 27 ppm (portrait)
Autoduplex speed (8.5" x 11")	Up to 55 ppm (portrait)
1st copy out time	3.5 sec.
Warm-up time	Approx. 22 sec.[2]
Copy resolution	600 x 600 dpi
Gradations	256 gradations
Multi-copy	1–9,999
Original format	Up to 11" x 17"
Magnification	25–400% in 0.1% steps, auto zooming
Copy functions	Electronic sorting, multi-job, adjustments (contrast, sharpness, image density), proof copy, interrupt mode, color mode, separate scan, sort/group, combination, original selection, ID card copy, 2-in-1, 4-in-1

SCANNER SPECIFICATIONS

Scan speed	**B&W / Color:** up to 240 ipm
Scan resolution	**Max.:** 600 x 600 dpi
Scan modes	Scan-to-Email, Scan-to-SMB, Scan-to-FTP, Scan-to-Box, Scan-to-USB, Scan-to-WebDAV, Scan-to-DPWS, Network TWAIN scan
File formats	JPEG, TIFF, PDF, PDF/A 1a and 1b (optional), compact PDF, encrypted PDF and searchable PDF (optional), XPS, compact XPS, PPTX and searchable PPTX (optional), searchable DOCX/XLSX (optional)
Scan destinations	2,100 (shared with fax), LDAP support
Scan functions	Annotation (text/time/date) for PDF, up to 400 job programs, real-time scan preview

FAX SPECIFICATIONS

Fax	Super G3 (optional)
Transmission	Analog, Internet Fax, Color i-Fax, IP-Fax
Resolution	**Max.:** 600 x 600 dpi (ultra-fine)
Compression	MH, MR, MMR, JBIG
Modem	Up to 33.6 Kbps
Destinations	2,100 (single + group)
Functions	Polling, time shift, PC-fax, receipt to confidential box, receipt to email/FTP/SMB, up to 400 job programs

USER BOX SPECIFICATIONS

Storable documents	**Max.:** 3,000 documents or 10,000 pages
Type of user boxes	Public Personal (with password or authentication) Group (with authentication)
Type of system boxes	Secure print, encrypted PDF, fax receipt, fax polling, annotation
User box functionality	Reprint, combination, download, sending (email/FTP/SMB and fax), copy box-to-box

SYSTEM FEATURES

Security	ISO 15408 EAL[4] IEEE 2600.1[4] IP filtering and port blocking SSL2, SSL3 and TSL1.0 network communication IPsec support IEEE 802.1x support FIPS 140-2 User authentication Authentication log Secure print Hard disk overwrite (8 standard types) Hard disk data encryption (AES 128) Memory data auto deletion Confidential fax receipt Print user data encryption Copy protection (Copy Guard, Password Copy) optional
Accounting	Up to 1,000 user accounts Active Directory support (user name + password + email + SMB folder) User function access definition Optional Biometric authentication (finger vein scanner) Optional ID card authentication (ID card reader)
Software	PageScope Net Care Device Manager PageScope Data Administrator PageScope Box Operator PageScope Direct Print Print Status Notifier Driver Packaging Utility Log Management Utility

[1] Maximum monthly duty cycle describes the maximum number of pages a device can output on a monthly basis. This specification is a guideline intended to offer a comparison of durability as it relates to the entire Konica Minolta MFP and printer product line so that the appropriate device can be placed in order to meet customer needs.

[2] Warm-up time may vary depending on the operating environment and usage.

[3] Supports x64 only.

[4] Certification pending.

COMPONENTS AND OPTIONS

AU-102 Biometric authentication	Finger vein scanner
Dynamag magnetic stripe card reader	Requires WT-506 Working Table
AU-205H Universal ID card reader*	Various ID card technologies
AU-211 CA/PIV solution	Requires WT-506 Working Table
EK-608 USB I/F kit	USB keyboard connection
EK-609 USB I/F kit	USB keyboard connection, Bluetooth
DK-510 Copier desk	Provides storage space for print media and other materials
FK-514 Fax board	Super G3 fax, digital fax functionality
FK-515 Fax board	Super G3 fax, digital fax functionality, lines 3 & 4 support (requires MK-742)
FS-533 Staple finisher	50-sheet stapling, 500 sheets max. output
FS-536 Staple finisher	50-sheet stapling, 3,200 sheets max. output (requires RU-513)
FS-536SD Booklet finisher	50-sheet staple finisher, 20-sheet booklet finisher, 2,200 sheets max. output (requires RU-513)
FS-537 Staple finisher	100-sheet stapling, 3,200 sheets max. output (requires RU-513)
FS-537SD Booklet finisher	100-sheet stapling, 20-sheet booklet finisher, 2,500 sheets max. output (requires RU-513)
HD-524 Hard disk	Hard disk mirroring, 250 GB
JS-506 Job separator	Separation for fax output, etc.
JS-602 Job separator for FS-537	Separation for fax output, etc.
KH-102 Keyboard holder	To place USB keyboard
KP-101 10-Key pad	For use instead of touchscreen
LK-102 v3	PDF/A, PDF encryption, digital signature
LK-104 v3	Provides voice guidance functions
LK-105 v4	Searchable PDF
LK-106	Supports native barcode printing
LK-107	Supports native Unicode printing
LK-108	Supports native OCR A and B font printing
LK-110 v2	Generates various file formats incl. DOCX, XLSX and combines LK-102 (encrypted PDF) + LK-105 (searchable PDF/OCR functionality)
LK-111 ThinPrint® Client	Print data compression for reduced network impact
LU-207 Large capacity unit	2,500 sheets / 8.5" x 11" to 12" x 18" / 52–256 gsm
LU-302 Large capacity unit	3,000 sheets / 8.5" x 11" / 52–256 gsm
MK-730 Mount kit	Banner paper guide
MK-735 Mount kit	Installation kit for ID card reader
MK-742 Mount kit	Installation kit for FK-515 fax board
OT-506 Output tray	Output tray use instead of finisher
PC-115 Universal tray (x1)	500 sheets / 5.5" x 8.5" to 11" x 17" / 52–256 gsm
PC-215 Universal tray (x2)	2 x 500 sheets / 5.5" x 8.5" to 11" x 17" / 52–256 gsm
PC-415 Large capacity tray	2,500 sheets / 8.5" x 11" / 52–256 gsm
PI-507 Post inserter for FS-537	Cover insertion, post finishing
PK-519 Punch kit for FS-533	2/3-hole punching, autoswitching
PK-520 Punch kit for FS-536	2/3-hole punching, autoswitching
PK-523 Punch kit for FS-537	2/3-hole punching, autoswitching
RU-513 Relay unit	Required for the FS-537 / FS-537SD, FS-536 / FS-536SD
SC-508 Security kit	Copy Guard function (2x required)
SP-501 Stamp unit	Added fax stamp capability kit
UK-212 Wireless LAN	Wireless LAN to network connector
UK-501 Multi-feed detection kit	Detects multi-feeding in the document feeder
WT-506 Working table	Authentication device placement
ZU-609 Z-fold unit for FS-537	Z-fold for 11" x 17" prints, 2/3-hole punching

*May not be available at time of launch.

Data sheet

HP Color LaserJet Pro MFP M479 series

The HP Color LaserJet Pro MFP M479 - focus your time on growing business and staying ahead.

Winning in business means working smarter. The HP Color LaserJet Pro MFP M479 is designed to let you focus your time where it's most effective-growing your business and staying ahead of the competition.

Dynamic security enabled printer. Only intended to be used with cartridges using an HP original chip. Cartridges using a non-HP chip may not work, and those that work today may not work in the future. http://www.hp.com/go/learnaboutsupplies

HP Color LaserJet Pro MFP M479dw

HP Color LaserJet Pro MFP M479fdn

HP Color LaserJet Pro MFP M479fdw

Built to keep you—and your business—moving forward

- Scan files directly to Microsoft® SharePoint®, email, USB, and network folders.[1]
- Help save time by automating all the steps in a complicated workflow and apply saved settings.[2]
- Print wirelessly with or without the network, stay connected with dual band Wi-Fi and Wi-Fi direct.[3,4,5]
- Print effortlessly from any device, virtually anywhere, toany HP printer—securely through the cloud.[6]

Best-in-class security--detect and stop attacks[7]

- A suite of embedded security features help protect your MFP from being an entry point for attacks.[7]
- Thwart potential attacks and take immediate action with instant notification of possible security issues.[12]
- Help ensure security of confidential information with optional PIN/Pull printing to retrieve print jobs.[8]
- Optional HP JetAdvantage Security Manager lets you set configuration policies and validate settings

Simply designed to uncomplicate your day

- Set up this MFP fast, and easily manage device settings to help increase overall printing efficiency.
- Tackle tasks quickly and easily—with the simple 4.3" (10.9cm) color touchscreen.
- Print Microsoft® office formatted files in addition to PDFs right off your USB drive.[9]
- Avoid interruptions with an HP LaserJet MFP designed to be streamlined for maximum productivity.

Sustainability is smart business

- Avoid frustrating reprints, wasted supplies, and service calls using Original HP toner cartridges.
- Help save paper right out ofthe box. The duplex print setting is set at default paper savings mode.[10]
- Saves up to18% energy over prior products.[11]
- Help save energy with HP Auto-On/Auto-Off Technology.[13]

[1] Requires an Internet connection to the printer. Services may require registration. App availability varies by country, language, and agreements. For details, see http://www.hpconnected.com [2] Connect printer/MFP to the network and complete customization through the Embedded Web [3] Wireless operations are compatible with 2.4 GHz and 5 GHz operations. App or software and HP ePrint account registration may also be required. Some features require purchase of an optional accessory. Learn more at http://www.hp.com/go/mobileprinting [4] Feature is only supported by the HP Color LaserJet Pro MFP M479dw, M479fdw, and M477fnw. Wireless performance is dependent on physical environment and distance from access point, and may be limited during active VPN connections [5] Feature is supported on the HP LaserJet Pro M479dw/M479fnw/M479fdw only. Mobile device needs to be connected directly to the Wi-Fi network of a wireless direct–capable MFP or printer prior to printing. Depending on mobile device, an app or driver may also be required. Learn more at http://www.hp.com/go/businessmobileprinting [6] To enable HP Roam, some devices may require firmware to be upgraded and an optional accessory to add Bluetooth® Low Energy (BLE) beaconing capabilities. Subscription may be required. For more information, visit http://www.hp.com/go/roam [7] Based on HP review of 2019 published security features of competitive in-class printers. Only HP offers a combination of security features that can monitor to detect and automatically stop an attack then self-validate software integrity in a reboot. For a list of printers, visit http://www.hp.com/go/PrintersThatProtect. For more information: http://www.hp.com/go/printersecurityclaims [8] Pin printing enabled via USB installed in rear of device. [9] Microsoft and PowerPoint are U.S. registered trademarks of the Microsoft group of companies. Feature works with Microsoft Word and PowerPoint 2003 and later. Only Latin language fonts are supported. [10] Dependent upon country setup specifications. All new product introductions beginning in Fall 2019 will include consistent worldwide default duplex settings (across bundles/drivers); Spring 2019 will include consistent worldwide default duplex settings for most products across the most common drivers [11] Based on HP Internal testing using normalized TEC Value, 2019. [12] Instant threat notifications can appear on the device control panel when a potential threat occurs from malicious intent or there is a bug or vulnerability in the firmware code of the device. If this error raises concern, please contact your company IT representative or, if unavailable, HP Support, who can investigate the cause through analysis of device syslog data using a standard SIEM tool from McAfee, Splunk, Arcsight or SIEMonster. The control panel error message may show an error code on a blue screen during code signature checks or memory write intrusions. [13] HP Auto-On/Auto-Off Technology capabilities subject to printer and settings; may require a firmware upgrade.

HP Color LaserJet Pro MFP M479fdw

Product walkaround

1. 4.3-inch (10.9 cm) customizable color touchscreen
2. Easy-access USB port[1]
3. Front door release button
4. Front door (access to HP JetIntelligence toner cartridges)
5. Hi-Speed USB 2.0 port, USB port for job storage and PIN printing,[2] Gigabit Ethernet LAN port, Fax port[3]
6. 50-sheet ADF with single-pass, two-sided scanning[4] supports media sizes up to 8.5 x 14 inches (216 x 356 mm)
7. Flatbed scanner handles media sizes up to letter (A4)
8. 150-sheet output bin
9. Dual-band Wi-Fi with Bluetooth® Low Energy[5] for easy wireless printing and setup
10. 50-sheet multipurpose tray 1 supports media sizes up to 8.5 x 14 inches (216 x 356 mm)
11. Automatic two-sided printing
12. 250-sheet tray 2 supports media sizes up to 8.5 x 14 inches (216 x 356 mm)

[1] An administrator must enable the easy-access USB port before use. [2] Requires purchase of separate USB flash drive with at least 16 GB capacity. [3] Fax capability is not available on the HP Color LaserJet Pro MFP M479dw model. [4] Single pass, two-sided scanning is not available on the HP Color LaserJet Pro MFP M479dw model. The MFP M479dw offers simplex scanning capabilities. 5 Wireless operations are compatible with 2.4 GHz and 5 GHz operations only. Wi-Fi is a registered trademark of Wi-Fi Alliance®. Bluetooth is a trademark owned by its proprietor and used by HP Inc. under license. Learn more at hp.com/go/mobileprinting. [6] Measured using ISO/IEC 24734 and excludes first set of test documents. For more information, see hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity. [7] Scan speed measured from ADF at default 300 dpi (black-and-white, grayscale, and color). Actual processing speeds may vary depending on scan resolution, network conditions, computer performance, and application software. [8] Purchase of optional paper tray required to reach maximum input capacity. [9] Recommended Monthly Page Volume (RMPV): HP recommends that the number of printed pages per month be within the stated range for optimum device performance, based on factors including supplies replacement intervals and device life over an extended warranty period. [10] Actual yields and costs vary considerably depending on images printed, number of color pages printed, and other factors. Optional high-yield cartridges are not included in printer purchase and must be purchased separately.

HP Services

Downtime can have serious consequences, so HP provides support beyond the standard warranty. You benefit from reduced risk, maximized uptime, predictable service delivery and no unbudgeted repair costs. HP Care Pack Services provide a comprehensive suite of protection services designed to keep HP hardware and software up and running so employees can stay productive.

For carepack availability visit: hp.com/go/cpc

Top features

Today's businesses are always on, and always connected. Choose an MFP that can keep up with how you actually work, collaborate, and get things done.

HP Print Security isn't just about securing printers. It's about helping to secure your network with real-time threat detection, automated monitoring, and software validation—designed to detect and stop an attack as it happens.[7]

You have enough to worry about each day. It's easy to accomplish what you need—and exceed your own expectations—with a streamlined MFP that's simple to use.

Business is all about resource management, and finding efficiencies is everyone's responsibility. HP LaserJet MFPs are designed with the environment in mind, so you can handle what you need while conserving energy wherever possible.

[1] EPEAT® registered where applicable. EPEAT registration varies by country. See http://www.epeat.net for registration status by country. [2] In box cartridges yield ~1,200 color composite (C/Y/M) and ~2,400 black pages based on ISO/IEC 19798 and continuous printing. Actual yields vary considerably based on images printed and other factors. For details see: http://www.hp.com/go/learnaboutsupplies. Pages may vary based on customer printing conditions. [3] Power requirements are based on the country/region where the printer is sold. Do not convert operating voltages. This will damage the printer and void the product warranty. Power consumption values typicallty based on measurement of 115V device. [4] Toner cartridges designed for distribution and use within a designated region only; will not work outside of designated region. [5] Declared yield value in accordance with ISO/IEC 19798. Actual yields vary considerably based on images printed and other factors. For more information, visit http://www.hp.com/go/learnaboutsupplies [6] Local printing requires mobile device and printer to be on the same network (usually Wi-Fi access points bridge wireless to wired connections) or have a direct wireless connection. Wireless performance is dependent on physical environment and distance from access point. Remote printing requires an Internet connection to an HP web-connected printer. Wireless broadband use requires separately purchased service contract for mobile devices. Check with service provider for coverage and availability in your area. For more information visit hp.com/go/mobileprinting. To enable HP Roam, some devices may require firmware to be upgraded and an optional accessory to add Bluetooth® Low Energy (BLE) beaconing capabilities. Subscription may be required. For more information, visit hp.com/go/roam 7 First Copy Out from Ready and Simplex Copy Speed measured using ISO/IEC 29183, Duplex Copy Speed measured using ISO/IEC 24735, excludes first set of test documents. For more information see http://www.hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application and document complexity. [8] Acoustic values are subject to change. For current information see http://www.hp.com/support. Configuration tested: base model, simplex printing, A4 paper at an average of 27 ppm. 9 Measured using ISO/IEC 24734, excludes first set of test documents. For more information see http://www.hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity. 10 Measured using ISO 24734 Feature Test, A5 Landscape Feed. Speed may vary based on content, PC, media orientation, and media type. 11 Measured using ISO/IEC 17629. For more information see http://www.hp.com/go/printerclaims. Exact speed varies depending on the system configuration, software application, driver, and document complexity. 12 Duty cycle is defined as the maximum number of pages per month of imaged output. This value provides a comparison of product robustness in relation to other HP LaserJet or HP Color LaserJet devices, and enables appropriate deployment of printers and MFPs to satisfy the demands of connected individuals or groups. 13 HP recommends that the number of pages per month of imaged output be within the stated range for optimum device performance, based on factors including supplies replacement intervals and device life over an extended warranty period 14 HP SureSupply alerts you when your print cartridge is running low and helps you purchase online or locally through HP or a participating retailer. For more information, visit http://www.hp.com/go/SureSupply; only available with Original HP supplies; Internet access required. 15 BA TEC is equal to Best TEC. Power requirements are based on the country/region where the printer is sold. Do not convert operating voltages. This will damage the printer and void the product warranty. Energy Star value typically based on measurement of 115V device.

University Hospital - ED Expansion Project

Specification Coversheet

Description: Printer, Wristband

Manufacturer: Zebra Technologies Corp ((847) 634-6700)

Vendor: Zebra Technologies Corp ((847) 634-6700)

Model: ZD510-HC (Healthcare, Direct Thermal)

Alt ID: PRT-WRT

Mfr #: DT ZD510-HC

Vendor #: DT ZD510-HC

Item ID:

Wristband printer. Features: Media cartridge loading, automatic media loading, 300 dpi print resolution (12 dots / mm), Link-OS, real time clock, print speed (automatic selection based on installed wristbands), direct thermal printing of barcodes/text/graphics. Dual-wall frame, ZPL or ZPL LL, 16 MB standard SDRAM memory and 8 MB standard flash memory. E3 element energy equalizer, odometer, tool-less printhead and platen replacement.

General Product Detail

ZD510-HC Wristband Printer

Specifications are provided for reference and are based on printer tests using Zebra® brand wristbands. Results may vary in actual application settings Zebra recommends always qualifying any application with thorough testing.

STANDARD FEATURES

- Quick and easy media cartridge loading
- Automatic media loading — no user contact with the media during loading or removal
- 300 dpi print resolution (12 dots / mm)
- Healthcare Power Supply
- Link-OS
- Real Time Clock
- Print Speed (automatic selection based on installed wristbands)
  - Prints at 2 inches / second (51 mm / s) with healthcare wristbands
  - Prints at 4 inches / second (102 mm / s) with Fun and Splash hospitality / leisure wristbands
- Direct thermal printing of barcodes, text, and graphics
- Dual-wall frame, impact resistant plastic
- ZPL® or ZPL II® programming language
- 16 MB Standard SDRAM memory (256 MB Standard SDRAM)
- 8 MB Standard Flash memory (512 MB Standard Flash)
- E3™ Element Energy™ Equalizer
- Connectivity: USB 2.0, USB Host, Bluetooth Low Energy, 10/100 Ethernet
- Odometer for print length tracking
- Illuminated Media Low / Media Out indicator
- Tool-less printhead and platen replacement
- Unicode™ compliant for multi-language printing

- XML Enabled Printing — allows XML communications from information systems
- Instant media calibration — no wasted media
- 16 resident expandable bitmap fonts
- Resident scalable font
- Head-up sensor
- Media Low and Media Out sensors
- Standard Tear-off mode feature

OPTIONAL FEATURES

- Factory installed wireless – Wi-Fi certified 802.11ac and Bluetooth 4.1; MFi-certified (Apple)
- Font Packs — Asian and other international font kits
- ZBI 2.0 — Field installed

PRINT DNA SOFTWARE SOLUTIONS

Development Tools — An intuitive, easy-to-use software program for creating complex wristband and label designs, purchased separately (option)

Management Tools — Offers basic features for simple wrist band and label design (standard)

Productivity Tools — A design tool for designing and distributing wristband templates for later recalling and printing via XML data streams

Visibility Tools — Centrally manage Zebra printers from a single PC screen anywhere on your global network (option)

ZBI 2.0 — Powerful programming language that lets printers run standalone applications, connect to peripherals, and much more (option)

ZBI-Developer — Programming utility makes it dramatically easier for programmers to create and test complex ZBI 2.0 programs and distribute them to the printer (standard with ZBI 2.0)

Firmware

ZPL II — Universal language for Zebra printers. Simplifies wrist band and label formatting and enables format compatibility with existing systems that run Zebra printers.

Web View — Connect and control Zebra barcode printers via the printer's Web interface using a common Web browser.

Alert — Printers equipped with ZebraNet print servers will notify you via any email-enabled, wired, or wireless device to minimize downtime.

Z-BAND WRISTBAND CARTRIDGE SPECIFICATIONS

Healthcare wristbands feature silver antimicrobial coating, which test results show effectively protects the wristband against S. aureus, P. aeruginosa, E. coli, and MRSA

Select Wristband Options

Style	Size	Length	
		inches	mm
Z-Band Direct	Adult	1 × 11	25.4 × 279.4
Z-Band Direct	Child	1 × 7	25.4 × 177.8
Z-Band Direct	Infant	1 × 6	25.4 × 152.4
Z-Band QuickClip	Adult	1 × 1.1875	30.16 × 279.4
Z-Band QuickClip	Child	1 × 7	25.4 × 177.8
Z-Band Splash	1 size only	1 × 10	25.4 × 254
Z-Band Fun	1 size only	1 × 10	25.4 × 254

For a complete list of Z-band Wristbands please see Zebra.com

Healthcare

- Z-Band Direct have adhesive closure.
- Wristbands available in White, Red, Blue, Yellow, Green, Orange, Pink and Purple.
- Z-Band QuickClip haves clip closure.
- Clips available in White, Red, Blue, Yellow, Green, Pink and Purple.

Hospitality / Leisure

- Z-Band Fun and Splash have adhesive closure.
- Wristbands available in Red, Blue, Yellow, Green, Orange, Pink and Purple.
- Z-Band Splash has waterproof adhesive closure.

CALIBRATION PROCEDURE

The ZD510-HC is equipped with an automatic calibration feature that doesn't waste wristbands.

PRINTING SPECIFICATIONS

- Resolution: 300 dots / inch (dpi) (12 dots / mm)
- Dot size (W x L): 0.0033" x 0.0039" (0.084mm x 0.099mm)
- Minimum print length: 3" (76 mm)
- 3 wristband widths: 0.75", 1.00", and 1.1875" (19.05, 25.4, and 30.16 mm)
- Barcode modulus “X” dimension: 300 dpi = 3.33 mil to 32.67 mil

PHYSICAL SPECIFICATIONS

Attribute	ZD510-HC
Height*	7.0" (178 mm)
Width	5.0" (127 mm)
Depth	9.5" (242 mm)
Weight	3.1 lbs (1.4 kg)

* Requires 6 in. (153mm) above printer to load cartridge

ZPL PROGRAMMING LANGUAGE (ZPL/ZPL II)

- Communicates in printable ASCII characters
- Compatible with mainframe, mini, and PC hosts
- Downloadable objects include graphics and bitmap fonts, wristband templates and formats
- Automatic memory allocation for format while printing
- Automatic serialization of fields
- Format inversion (white on black)
- Mirror-image printing
- Four position field rotation (0°, 90°, 180°, 270°)
- Programmable wristband quantities with print, pause
- Status messages to host upon request

FONT MATRICES: 300 DPI (12 DOTS / MM) PRINTHEADS

Font	Matrix (in dots) (H × W)	Type†	Minimum Character Size (H × W)	Max CPI
A	9 × 5	U-L-D	0.035" × 0.020"	50.5
B	11 × 7	U	0.043" × 0.030"	33.7
C, D	18 × 10	U-L-D	0.070" × 0.040"	25.3
E	41 × 20	OCR-B	0.160" × 0.086"	11.7
F	26 × 13	U-L-D	0.101" × 0.053"	18.9
G	60 × 40	U-L-D	0.234" × 0.158"	6.3
H	30 × 19	OCR-A	0.177" × .0092"	10.8
GS	24 × 24	SYMBOL	0.094" × 0.086"	11.7
P	20 × 18	U-L-D	0.078" × 0.059"	N / A
Q	28 × 24	U-L-D	0.109" × 0.079"	N / A
R	35 × 31	U-L-D	0.137" × 0.102"	N / A
S	40 × 35	U-L-D	0.156" × 0.116"	N / A
T	48 × 42	U-L-D	0.187" × 0.139"	N / A
U	59 × 53	U-L-D	0.230" × 0.175"	N / A
V	80 × 71	U-L-D	0.312 × 0.234"	N / A
Ø	15 x 12	U-L-D	Scalable (Smooth) Font	

† U = Uppercase L = Lowercase D = Descenders

- Character Fonts: Standard bitmapped Zebra fonts: A, B, C, D, E (OCR-B), F, G, H, (OCR-A), GS, P, Q, R, S, T, U, V and Ø Smooth font (CG Triumvirate™ Bold Condensed).
- Supports user defined fonts and graphics — including custom logos
- Bitmap fonts are expandable up to 10 times, height and width independent. Fonts E and H (OCR-B and OCR-A), however, are not considered in spec when expanded.
- Smooth scalable font Ø (CG Triumvirate™ Bold Condensed) is expandable dot-by-dot, height and width independent, while maintaining edges to a maximum 1500 x 1500 dots.

ZPL BARCODE SYMBOLOGIES

- Barcode Ratios: 2:1 (non-rotated) and 3:1
- Linear Barcodes: Code 11, Code 39, Code 93, Code 128, UPC-A, UPC-E, EAN-8, EAN-13, EAN-14, UPC-A and UPC-E with EAN 2 or 5 digit extensions, Plessey, POSTNET, Standard 2 of 5, Industrial 2 of 5, Interleaved 2 of 5, LOGMARS, MSI, Codabar, and GS1 DataBar™ (formerly RSS)
- 2D Barcodes: PDF417, MicroPDF-417, Code 49, Maxicode, Codablock, Data Matrix, QR code, and Aztec

ELECTRICAL SPECIFICATIONS

Universal power supply (PFC Compliant) 100-240VAC, 50-60Hz (70 Watts) External Power Supply

AGENCY APPROVALS

- Emissions: FCC Part 15, Subpart B, VCCI, RCM
- Emissions & Susceptibility – (CE): EN 55032:2012 class B & EN 55024:2010, EN 61000-3-2, EN 61000-3-3, CISPR 32:2015
- Safety: CB Scheme IEC 60950-1 & IEC 62368-1, TUV NRTL
- Power Supply: IEC 60601-1:2012

ZD510-HC ENVIRONMENTAL SPECIFICATIONS

- Operating Temperature: 32 to 104 (0 to 40 C) for operating temperature
- Storage Temperature: -40° to 140°F (-40° to 60°C)
- Operating Humidity: 20% to 85% non-condensing R.H.
- Storage Humidity: 5% to 85% non-condensing R.H.

WRISTBAND CARTRIDGE ENVIRONMENTAL SPECIFICATIONS

- Service Temperature: -40° to 140° F (-40° to 60° C)
- Storage Temperature: 32° to 70° F (0° to 21° C) at 35% to 50% RH

PREVENTATIVE MAINTENANCE

Zebra recommends cleaning the printer on a regular basis using standard Zebra printer parts and cleaning supplies. Consult your User Guide for further details.

Disinfectants / Cleaning Solutions

Please consult the Guide to Cleaning and Disinfecting Zebra Healthcare Printers on Zebra.com for a full list of approved cleaning and disinfecting agents.

- Character Fonts: Standard bitmapped Zebra fonts: A, B, C, D, E (OCR-B), F, G, H, (OCR-A), GS, P, Q, R, S, T, U, V and Ø Smooth font (CG Triumvirate™ Bold Condensed).
- Supports user defined fonts and graphics — including custom logos
- Bitmap fonts are expandable up to 10 times, height and width independent. Fonts E and H (OCR-B and OCR-A), however, are not considered in spec when expanded.
- Smooth scalable font Ø (CG Triumvirate™ Bold Condensed) is expandable dot-by-dot, height and width independent, while maintaining edges to a maximum 1500 x 1500 dots.

ZPL BARCODE SYMBOLOGIES

- Barcode Ratios: 2:1 (non-rotated) and 3:1
- Linear Barcodes: Code 11, Code 39, Code 93, Code 128, UPC-A, UPC-E, EAN-8, EAN-13, EAN-14, UPC-A and UPC-E with EAN 2 or 5 digit extensions, Plessey, POSTNET, Standard 2 of 5, Industrial 2 of 5, Interleaved 2 of 5, LOGMARS, MSI, Codabar, and GS1 DataBar™ (formerly RSS)
- 2D Barcodes: PDF417, MicroPDF-417, Code 49, Maxicode, Codablock, Data Matrix, QR code, and Aztec

ELECTRICAL SPECIFICATIONS

Universal power supply (PFC Compliant) 100-240VAC, 50-60Hz (70 Watts) External Power Supply

AGENCY APPROVALS

- Emissions: FCC Part 15, Subpart B, VCCI, RCM
- Emissions & Susceptibility – (CE): EN 55032:2012 class B & EN 55024:2010, EN 61000-3-2, EN 61000-3-3, CISPR 32:2015
- Safety: CB Scheme IEC 60950-1 & IEC 62368-1, TUV NRTL
- Power Supply: IEC 60601-1:2012

ZD510-HC ENVIRONMENTAL SPECIFICATIONS

- Operating Temperature: 32 to 104 (0 to 40 C) for operating temperature
- Storage Temperature: -40° to 140°F (-40° to 60°C)
- Operating Humidity: 20% to 85% non-condensing R.H.
- Storage Humidity: 5% to 85% non-condensing R.H.

WRISTBAND CARTRIDGE ENVIRONMENTAL SPECIFICATIONS

- Service Temperature: -40° to 140° F (-40° to 60° C)
- Storage Temperature: 32° to 70° F (0° to 21° C) at 35% to 50% RH

PREVENTATIVE MAINTENANCE

Zebra recommends cleaning the printer on a regular basis using standard Zebra printer parts and cleaning supplies. Consult your User Guide for further details.

Disinfectants / Cleaning Solutions

Please consult the Guide to Cleaning and Disinfecting Zebra Healthcare Printers on Zebra.com for a full list of approved cleaning and disinfecting agents.

Exercise Station, T-Bar Storage, Universal Rack

Model: ES28

Modular Exercise Station

- 3″ W x 2″ D x 28″ H
- 5 hooks per base, equally spaced
- Add capacity as needed
- Ships parcel freight
- Polished stainless steel
- Includes mounting hardware and starter snap ring
- Model **ES84**: 3 bases, 84″ total

Free Stretch Tube Included with Model **ES84**

Model: 27.300M

Therapy Bar Wall Rack

- 14″ W x 3″ D x 17″ H
- Brown powdercoat finish
- Ships parcel freight
- Steel construction
- 50 lb. capacity
- Weight bars not included

Model: C320TB

Therapy Bar Cart

- 21″ W x 15″ D x 30″ H
- 150 lb. capacity
- Lightweight, poly shelves
- Ships parcel freight
- Gray shelves with aluminum uprights
- Built-in push handles
- Holds up to 15 bar weights
- Weights not included

Model: RR31

Universal Storage Rack

- 33″ W x 12″ D x 4″ H
- Use for crutches, walkers, rolls, etc.
- Steel construction
- Ships parcel freight
- Gray powdercoat finish
- 30 lb. capacity per hook
- Save with pairs ***(RR32)***

Discproducer PP-100III CD/DVD/Blu-ray Disc Publisher and Printer

Contact Us 800.463.7766

Mon-Fri 7am-4pm PT

High-quality CD/DVD/Blu-ray printing and publishing at a remarkable value.

The perfect choice for professional CD, DVD, or Blu-ray® disc publishing and printing, the Epson Discproducer™ PP-100III is ideal for businesses looking for high-quality printing, reliable performance and a low total cost of ownership. Built with Epson's world-renowned robotic and printing technologies, it offers easy, unattended production of multiple types of discs — all in one compact device. With Epson's patented MicroPiezo® inkjet technology and six individual ink cartridges, it delivers crisp text and vibrant graphics for use in various industries including healthcare, legal and music. And, with ink sensors, AcuGrip® technology and a field-replaceable waste tank, it's easy to operate and maintain.

Model: C11CH40001

Overview

- **Simple, unattended production** — easily create multiple CD, DVD or Blu-ray discs
- **High-quality printing** — get sharp text and stunning graphics with patented MicroPiezo technology
- **Economical and easy to maintain** — low total cost of ownership
- **Compatibility** — comes standard with USB connectivity
- **Individual ink cartridges** — six high-capacity cartridges, each with low-ink sensors
- **Reliable** — robotic arm and patented AcuGrip technology ensure that only one disc is placed in the drive or on the printer at one time
- **Convenient** — easy front access to the disc drive
- **Built to last** — features a field-replaceable waste tank
- **Compact, durable design** — rugged construction in space-saving format
- **Industry-leading service and support** — for added peace of mind

Specifications

Ink Yield Information:
1,000 discs or more[2]

Pad Life:
Approximately 30,000 discs[1]

General:

Operating Systems:
- Windows 10, 8, 7, XP, Windows Server
- OS X®3

Dimensions:
14.84" (W) x 18.31" (D) x 19.4" (H) excluding AC / USB cables

Weight:
Approximately 46.2 lbs, including stackers and ink cartridges, excluding AC cable/discs

Print Other:

Print Speed:
- Speed mode up to 60 discs/hour at 1440 x 720 dpi
- Quality mode up to 40 discs/hour at 1440 x 1440 dpi

Publishing Speed:
- CD: up to 30 discs/hour
- DVD: up to 15 discs/hour
- Blu-ray: up to 8.5 discs/hour

Publishing Modes:
Standard mode up to 50 CDs/DVDs/Blu-rays unattended. Batch mode up to 100 CDs/DVDs/Blu-rays unattended.

Connectivity:

Standard Connectivity:
USB

Media:

Size:
Only standard 120mm discs

Surface:
Inkjet printable

CD / DVD Drive:
2 drives, includes Blu-ray

Type:
CD-R, DVD-R, DVD+R, DVD-R DL, DVD+R DL, BD-R, BD-R DL

Writing Speed:
- CD: maximum 40x
- DVD-R, DVD+R: maximum 12x
- DVD-R DL, DVD+R DL: maximum 8x
- BD-R: maximum 8x
- BD-R DL: maximum 8x

Features

Superior temperature performance

- custom-designed microprocessor temperature controller
- air-cooled refrigeration system with heavy duty 1/5 horsepower compressor
- environmentally friendly, non-CFC R134a refrigerant
- programmed automatic defrost every 8 hours
- cabinet-wide temperature remains within ±1 C (1.8 F), even with frequent door openings

Convenience and security

- fits below 34.00" (86.4 cm) ADA countertops without casters
- refrigeration system settings accessed through door-mounted controls
- exterior LED digital temperature display available in user-programmable C or F with choice of product or air temperature
- user-programmable audible and visual high/low alarms
- mechanical lock – mounted on side of door
- lockable controller so set points cannot be inadvertently changed
- flexible internal storage configuration (drawers and shelves interchangeable)
- Agion® antimicrobial and UV product protection added to molded plastic façade[1]

Durability and serviceability

- stainless steel construction on exterior and interior
- two epoxy-coated wire shelves standard
- back wall evaporator and front ventilation (no top, back or side clearance required)
- heavy-duty edge-mount self-closing hinges
- right or left-hinged door with integral handle and magnetic gasket door closure provides ease-of-use

Warranty

- 2 year parts and labor
- 5 year compressor parts only
- optional extended one year warranty (item# EW12)
  - 3 year parts and labor
  - 5 year compressor parts only
- optional extended three year warranty (item# EW36)
  - 5 year parts and labor

Certifications

UL CERTIFIED Commercial Refrigerator
SAFETY US/CA – SA12646

[1] Disclaimer: Antimicrobial protection is limited to the plastic façade.

Depth with façade	27.00" (68.6 cm)
H1 Height	31.38" (79.7 cm)
Height with casters	33.88" (86.1 cm)
Door swing	24.00" (61.0 cm) from front of cabinet, 180° from closed

Interior

Width	19.75" (50.2 cm)
Depth	18.32" (46.5 cm)
Height	18.94" (48.1 cm)
Storage system	(2) 18.10" x 19.10" (46.0 x 48.5 cm) epoxy-coated steel shelves

Door configurations

Door	solid, foamed stainless 21.50" x 22.51" x 1.63" (54.6 x 57.2 x 4.0 cm)
Optional glass door	triple pane, low E glass window dimensions 16.30" x 10.90" (41.4 x 27.7 cm)
Door lock	cylinder lock
Door handle	molded into front façade
Door hinges	edge-mount, self-closing, right or left
Gasket	magnetic

Electrical

C1 115 V/60/1 electrical	4.1 run load amps, NEMA 5-15P 90º hospital-grade plug. PVC, SJT, 16GA, 7' (2.1 m) cord.
Maximum size of branch circuit overcurrent device	15 amps dedicated circuit

Controls

Temperature display	standard 7 segment LED
Battery back-up on KP (keypad) models only	(8) AA batteries provide power to keypad, electronic lock and controls
C2 3rd party probe access	rear access port
Factory preset	4.4 C
Product simulation bottle	(1) 60 ml
Programmable operating range	2.2 to 10 C (36 to 50 F)

Alarming

High and low product temperature alarm	audible and visual, user programmable set points in C or F
Probe error alarm	audible and visual — product temperature probes, refrigeration and defrost
Alarm mute	user selectable
Alarm volume	0 -10 adjustable
Min/max temperature log	shows highest and lowest product temperature since last reset occurred

System performance

Refrigerant and charge	R134a refrigerant, 9 oz
Energy consumption	1.8 kWh/day
Nominal heat rejection[1]	415 BTU/hr (122 W)
Max heat rejection	2185 BTU/hr (640 W)

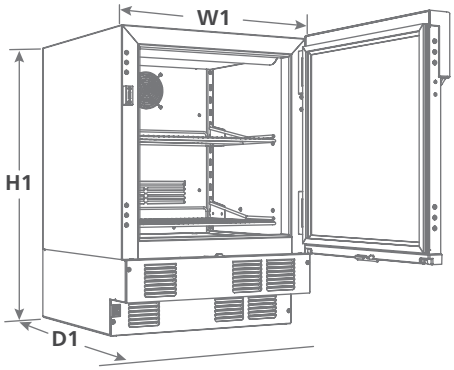
Shipping

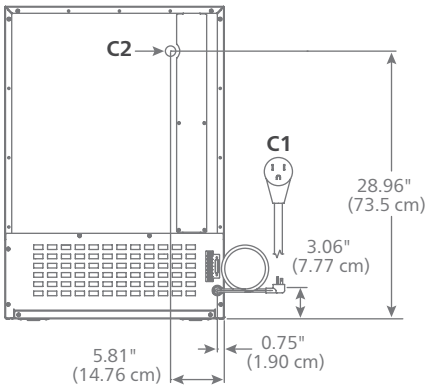
Approximate net weight	170 lb (77 kg)
Approximate ship weight	205 lb (93 kg)

NOTE: For indoor use only

SHORT FORM SPECIFICATION: Performance Plus undercounter refrigerator with choice of solid stainless steel or glass door fits under 34.00" (86.4 cm) ADA-height counter with 3.9 cu ft (110 L) of nominal capacity. Includes (2) epoxy-coated wire shelves, adjustable in 1.5" (3.81 cm) increments. Environmentally responsible R134a forced-air cooled refrigeration system. Top-mounted controls display product or air temperature in user-selectable C or F. Integral high and low temperature alarming. Storage area insulated with CARB compliant non-HFC foam. 7' (2.1 m) power cord with NEMA 5-15P 90º hospital-grade plug. UL and CUL listed.

Dimensional drawing





[1] Nominal heat rejection means heat rejection from a refrigerator in a 75 F (24 C) ambient with proper ventilation, an empty cabinet, default settings, default defrost schedules/durations, and nominal supply 115-120 VAC.

AL752BKSSTB

32.25" x 23.63" x 23.5" (H x W x D)

ADA compliant all-refrigerator for freestanding general purpose use, auto defrost w/SS door, towel bar handle, and black cabinet

Highlights:

32" height for use in ADA compliant settings

Full 5.5 cu.ft. capacity inside a convenient 24" footprint

Stainless steel wrapped door with professional towel bar handle adds luxury to any setting

Product Features:

ADA compliant	32" height for use in settings complying with ADA guidelines for lower counter height
Automatic defrost	Reduced user maintenance with automatic defrost operation
Stainless steel door	Durable construction brings modern luxury to any setting
Professional towel bar handle	Curved handle in brushed stainless steel offers a sturdy grip with professional elegance
Hidden evaporator	Cold wall design with hidden evaporator and seamless interior
Adjustable glass shelves	Rearrange your refrigerator space to accommodate all shapes and sizes or remove shelves for a simple clean-up
Adjustable thermostat	Dial thermostat located inside for easy temperature management
Interior light on rocker switch	Turn the light on when you need it and off when you're done with a convenient rocker switch located just behind the thermostat
Deep shelf space	Interior accommodates large trays up to 19 1/2" x 15 1/2"

58.88" x 23.63" x 26" (H x W x D)

ENERGY STAR qualified ADA compliant refrigerator-freezer in stainless steel with frost-free operation

Highlights:

ENERGY STAR qualified performance saves on yearly running costs

Designed to meet ADA guidelines

Slim 24" width offers over 10 cu.ft. of interior storage

Product Features:

ENERGY STAR Most Efficient 2016 recognition	This unit has been recognized as the Most Efficient of ENERGY STAR 2016, helping to prevent greenhouse gas emissions by meeting rigorous energy efficiency performance levels set by the U.S. Environmental Protection Agency
Frost-free operation	No-frost convenience for reduced user maintenance
ENERGY STAR qualified	Efficient performance meets ENERGY STAR standards for yearly energy savings
CEE Tier I qualified	Efficient design meets CEE Tier I specifications, using 20% less energy than DOE standards require for this product category
ADA compliant design	Unit's height and control location meets guidelines for ADA compliant refrigeration
Reversible stainless steel doors	User-reversible door swing for added flexibility
Large capacity	Over 10 c.f. of interior space
Thin-line design	Limited space is no problem for our thin-line models, designed specifically for those hard-to-fit spots
Interior light	Automatically illuminates when you open the door

The Ultimate in Performance, Innovation and Manageability

Checkout is the last chance to leave your shoppers with a good impression — and the quality of the checkout experience is heavily dependent upon the performance of the scanner you choose. If cashiers need to scan barcodes multiple times or enter unreadable barcodes manually, your checkout lanes can back up quickly, resulting in long lines, long wait times and cashiers that need to focus on ringing up merchandise as quickly as possible instead of focusing on shoppers to provide a better checkout experience. Now, you can give every shopper the ultimate last impression with the DS8100 Series handheld imager. The DS8100 Series rises above conventional imagers, delivering unprecedented scanning performance on 1D and 2D barcodes, innovative productivity enhancing tools, including swappable power sources — a PowerPrecision+ battery or PowerCap™ capacitor[1] — plus unrivaled manageability tools to keep your scanners up, running and in the hands of your cashiers. Keep checkout lines moving and cashiers free to deliver a more personal checkout experience with the DS8100 Series — because when it comes to the checkout experience, only the best will do.

Unprecedented Performance

Unparalleled Performance on Virtually Every Barcode in Any Condition
Only the DS8100 Series combines the power of an 800 MHz microprocessor, a high-resolution megapixel sensor and Zebra's exclusive PRZM Intelligent Imaging technology. With this unique combination of hardware and advanced algorithms, the DS8100 Series instantly captures the most problematic barcodes — including dense, poorly printed, crinkled, faded, distorted, dirty or damaged, as well as electronic barcodes on dimly lit displays.

Superior Scan Range
A scanning range up to 24 in./61 cm, a high resolution imaging sensor and a bright "aiming spot" improve checkout speed. Now, cashiers in busy checkout environments can easily scan items in a customer's shopping cart — without leaving the cash-wrap.

Innovation Beyond the Barcode

Swappable Power Options Reduce Your Investment Risk
Two interchangeable power options are available to power your devices: a PowerPrecision+ battery or a PowerCap capacitor. You can swap power options at any time on all models, right in your facility — no need to purchase separate battery-free and battery powered devices. And managing your power sources is easy. Since the PowerPrecision+ battery and PowerCap capacitor can report their model and serial numbers, you'll always know which power source is in each scanner.

On a single charge, the advanced PowerPrecision+ battery provides over three around-the-clock days of continuous scanning, plus a wealth of metrics for better battery management.

The PowerCap capacitor is ideal when the scanner can always be inserted into a charging cradle when not in use. The largest capacitor in its category, the superior PowerCap offers 2,000 scans on a full charge and 100 scans after as little as 35 seconds in the cradle — both metrics are four times the competition.

Dedicated Power Charge Gauge
See at-a-glance if the PowerPrecision+ battery or the PowerCap capacitor are sufficiently charged at the start of a shift.

Connect+ Contact Technology Designed to Last
The position of the charging contacts in the DS8100 Series charging cradles combined with Zebra's exclusive Connect+ Contact Technology assures reliable, corrosion-free charging over the life of the scanner.

The DS8100 Series — When Your Business Demands the Ultimate in Performance, Workforce Productivity and Customer Service.

For more information, visit www.zebra.com/ds8100 or access our global contact directory at www.zebra.com/contact

Support for the Barcode of the Future — Digimarc®
The DS8100 Series supports Digimarc digital watermark technology, which enables a barcode to be printed repeatedly over all surfaces of a product like wallpaper — yet remain completely invisible to the naked eye. Cashiers no longer need to locate and position a barcode in the field of view of the imager, enabling faster checkout and easier self-checkout.

Eliminate Bluetooth Interference with Wi-Fi Friendly Mode
Only operate on channels that are not shared with your wireless LAN (WLAN), protecting service levels for workers and customers.

Capture Multiple Barcodes with One Press of the Scan Trigger
Multi-code Data Formatting (MDF) provides the ability to capture multiple barcodes and transmit only those required in the precise order the application requires.

Capture Drivers License Data (DL Version Required)
With one press of the scan trigger, cashiers can capture and parse data on drivers licenses to automatically populate a loyalty or credit card application, verify age for age-restricted purchases and more.

Direct Decode Indicator Improves Productivity
Since the illumination on the barcode flashes to indicate a good decode, workers never need to pause to make sure a barcode was captured correctly.

Unrivaled Manageability

Identify and Correct Problem Barcodes with ScanSpeed Analytics
Get the information you need to spot and correct barcode issues before they impact worker productivity and customer service quality. Only from Zebra, ScanSpeed Analytics captures barcode type, scan speed and more for every scanned barcode. And an image of the barcode with the slowest scan time helps you proactively identify and address issues to improve scan speed.

Visionary Visibility Into Battery Performance Metrics
The PowerPrecision+ battery provides a wealth of health information, including charge cycles consumed, a State-of-Health meter and whether the battery can still hold a full charge. Now, you can easily spot, order and replace aging batteries before battery failures interrupt front end operations and cause checkout delays.

Control Your Scanners From a Smartphone, Tablet or PC
With this easy-to-use application, you can: control your imager's beeper, vibration and LED to set user alerts; display scanned barcode data; access model and serial number; and access battery statistics and more from Android, iOS and Windows smartphones, tablets and PCs.

No-cost Tools to Meet Advanced Management Needs
With 123Scan, you can easily create configuration barcodes to program scanners. If your imagers are in multiple locations across the country or around the world, with Scanner Management Service (SMS), you can configure and update the firmware for any DS8100 Series device that is plugged into the host — no depot staging or user action is required — such as the scanning of a configuration barcode.

Easy Application Development
Get everything you need to easily integrate scanning into your business applications with our Scanner Software Development Kits (SDKs) for Windows, Android, iOS and Linux. These SDKs provide documentation, drivers, test utilities and sample source code.

Simplify the Entire Scanning Experience with DataCapture DNA
Hardware is just the start of what you need to maximize the value of your scanners. The DS8100 Series is powered by DataCapture DNA, a set of unique development, management, visibility and productivity tools. Leveraging Zebra's 50 years of innovation, DataCapture DNA turns Zebra scanners into powerful tools that lower your TCO and help workers get more done each day. Decrease development cycles with development tools. Dramatically simplify scanner deployments of any size with management tools. Get the remote analytics you need to keep scanners up and running with visibility tools. And reach new levels of productivity with innovations that streamline tasks, allowing workers to capture the data the drives your business, faster and easier than ever.

DS8100 Series Specifications

Physical Characteristics

Dimensions	**Corded DS8108 and Cordless DS8178:** 6.6 in. H x 2.6 in. W x 4.2 in. D 16.8 cm. H x 6.6 cm. W x 10.7 cm. D **Standard Cradle:** 2.8 in. H x 3.3 in. W x 8.3 in. D 7.1 cm. H x 8.4 cm. W x 21.1 cm. D **Presentation Cradle:** 2.9 in. H x 3.7 in. W x 4.8 in. D 7.4 cm. H x 9.4 cm. W x 12.2 cm. D
Weight	**Corded DS8108:** 5.4 oz./154 g **Cordless DS8178:** 8.3 oz./235.3 g **Desk/Wall Cradle:** 7.1 oz./202 g **Presentation Cradle:** 6.5 oz./182 g
Input Voltage Range	**DS8108:** 4.5 to 5.5VDC **DS8178 Cradles:** 5V: 4.7 to 5.5VDC; 12V: 10.8 to 13.2VDC
Current[2]	**Corded DS8108 Operating Current at Nominal Voltage (5.0V):** 450 mA **Cradle:** 470 mA (typical) Standard USB; 743mA (typical) 12V
Color	Nova White, Twilight Black
Supported Host Interfaces	USB Certified, RS232, Keyboard Wedge, TGCS (IBM) 46XX over RS485
Keyboard Support	Supports over 90 international keyboards
FIPS Security Certification	Certified Compliant with FIPS 140-2
User Indicators	Direct decode indicator, good decode LEDs, rear view LEDs, beeper (adjustable tone and volume), dedicated Power Charge Gauge

Performance Characteristics

Light Source	Aiming Pattern; circular 617nm amber LED
Illumination	(2) 645nm red LEDs
Imager Field of View	48° H x 37° V nominal
Image Sensor	1,280 x 960 pixels
Minimum Print Contrast	16% minimum reflective difference
Skew/Pitch Roll Tolerance	+/- 60°; +/- 60°; 0-360°

Imaging Characteristics

Graphics Format	Images can be exported as Bitmap, JPEG or TIFF
Image Quality	109 PPI on an A4 document
Minimum Element Resolution	Code 39 - 3.0 mil; Code 128 - 3.0 mil; Data Matrix - 6.0 mil; QR Code - 6.0 mil; PDF - 5.0 mil

User Environment

Operating Temperature	32° to 122° F/0° to 50° C
Charging Temperature	32° to 104° F/0° to 40° C
Storage Temperature	-40° to 158° F/-40° to 70° C
Humidity	5% to 95% RH, non-condensing
Drop Specification	Designed to withstand multiple drops at 6.0 ft/1.8 m to concrete
Tumble Specification	Designed to withstand 2,000 1.5 ft./0.5 m tumbles[3]
Environmental Sealing	IP52
Electrostatic Discharge (ESD)	**DS8108/DS8178 and Cradles:** ESD per EN61000-4-2, +/-15 KV Air, +/-8 KV Direct, +/-8 KV Indirect
Ambient Light Immunity	0 to 9,000 Foot Candles/0 to 96,840 Lux

Radio Specifications

Bluetooth Radio	**Standard Bluetooth Version 4.0 with BLE:** Class 1 330 ft./100m and Class 2 33 ft./10m, Serial Port and HID Profiles
Adjustable Bluetooth Power	Class 1: Output power adjustable down from 4 dBm in 8 Steps Class 2: Output power adjustable down from 2 dBm in 8 Steps

Power

PowerPrecision+ Li-Ion Battery	Capacity: 2500 mAh Number of scans from full charge: 65,000[4] Charge time from empty to full: 9 hours over USB Charge time from audible low charge warning to Ready-to-Scan at 20% of full charge (default): 3 hours over USB
PowerCap Capacitor	Capacity: 440 F Number of scans from full charge: 2,000[4] Number of scans from Ready-To-Scan at 20% of full charge (default): 200[4] Number of scans from Ready-To-Scan at 15% of full charge: 100[4] Charge time from empty to full: 30 min over USB Charge time from audible low charge warning to Ready-to-Scan at 20% of full charge (default): 90 sec over USB Charge time from audible low charge warning to Ready-to-Scan at 15% of full charge: 35 sec over USB

Regulatory

Electrical Safety	EN 60950-1 2ed + A11 + A1 + A12 + A2:2013, IEC 60950-1 2ed + A1 + A2, UL 60950-1, CAN/CSA-C22.2 No. 60950-1-07
Environmental	RoHS EN 50581
LED Safety	IEC 62471
IT Emissions	EN 55022 (Class B); EN 55032 (Class B)
IT Immunity	EN 55024
Harmonic Current Emissions	EN 61000-3-2
Voltage Fluctuation and Flicker	EN 61000-3-3
Radio Frequency Devices	47 CFR Part 15, Subpart B, Class B
Digital Apparatus	ICES-003 Issue 6, Class B

Accessories

Standard cradle, presentation cradle, wall mount bracket, spare battery, spare PowerCap; document capture stands

Decode Capabilities[5]

1D	Code 39, Code 128, Code 93, Codabar/NW7, Code 11, MSI Plessey, UPC/EAN, I 2 of 5, Korean 3 of 5, GS1 DataBar, Base 32 (Italian Pharma)
2D	PDF417, Micro PDF417, Composite Codes, TLC-39, Aztec, DataMatrix, MaxiCode, QR Code, Micro QR, Chinese Sensible (Han Xin), Postal Codes, SecurPharm, DotCode, Dotted DataMatrix
Digimarc	Digital watermark technology

Decode Ranges (Typical)[6]

Symbology/Resolution	Near/Far
Code 39: 3 mil	2.2 in./5.6 cm to 5.0 in./12.7 cm
Code 39: 20 mil	0 in./0 cm to 36.8 in./93.5 cm
Code 128: 3 mil	2.6 in./6.6 cm to 4.5 in./11.4 cm
Code 128: 5 mil	1.6 in./4.1 cm to 8.4 in./21.3 cm

Put the DS8100 Series to Work in:

Retail
- Point-of-Sale (POS)
- Loyalty applications
- Electronic coupon redemption
- Backroom receiving
- Inventory management

Hospitality
- Check-in
- Ticketing (concerts, sporting events and more)
- Loyalty cards

Transportation and Logistics
- Shipping and receiving
- Picking
- Product tracking
- Ticketing (airports, train and bus terminals)
- Postal

Light/Clean Manufacturing
- Product and component tracking
- Work-in-process (WIP)

Government
- Lottery and gaming
- Administration
- Banking

Code 128: 15 mil	0 in./0 cm to 27.1 in./68.8 cm
PDF 417: 5 mil	2.3 in./5.8 cm to 6.4 in./16.3 cm
PDF 417: 6.7 mil	1.8 in./4.6 cm to 8.5 in./21.6 cm
UPC: 13 mil (100%)	0 in./0 cm to 24.0 in./61.0 cm
Data Matrix: 7.5 mil	2.1 in./5.3 cm to 6.9 in./17.5 cm
Data Matrix: 10 mil	1.1 in./2.8 cm to 9.9 in./25.1 cm
QR: 20 mil	.1 in./.3 cm to 17.6 in./44.7 cm

Warranty

Subject to the terms of Zebra's hardware warranty statement, the DS8178 and the CR8178 are warranted against defects in workmanship and materials for a period of three years from the date of shipment. The DS8108 is warranted against defects in workmanship and materials for a period of five years from the date of shipment. Complete Zebra hardware product warranty statement: www.zebra.com/warranty

Recommended Services

Zebra OneCare Select; Zebra OneCare Essential

Utilities and Management

123Scan	Programs scanner parameters, upgrades firmware, displays scanned barcode data, scanning statistics, battery health, asset data and prints reports. www.zebra.com/123scan
Symbol Scanner SDK	Generates a fully-featured scanner application, including documentation, drivers, test utilities and sample source code. www.zebra.com/scannersdk-forwindows

Medical Equipment Resources, Ltd.

University Hospital - ED Expansion Project

Specification Coversheet

Description: **Scanner, Barcode**
Manufacturer: Zebra Technologies Corp ((847) 634-6700)
Vendor: Zebra Technologies Corp ((847) 634-6700)
Model: Symbol LS2208 (USB Kit with Stand)

Alt ID: SCN-BCS
Mfr #: LS2208-SR20007R-NA
Vendor #: LS2208-SR20007R-NA

Scanner barcode. Cash Register White or Twilight Black color. Includes USB cable and stand. Featuring 1D scanning, 17 inch wide working range on 100 percent UPC/EAN symbols, Plug-and-play, universal cable, intuitive scanning, functions normally after repeated 5 feet or 1.5 meter drops to concrete and enables Advanced Data Formatting (ADF). RoHS compliant.

SYMBOL LS2208

Our Best Selling Handheld Scanner
INCREASED PRODUCTIVITY, LOWER TCO

The LS2208 handheld scanner from Zebra offers high performance scanning at a moderate price point. From the retail point-of-sale to school book checkout, the LS2208 provides fast, reliable scanning in a durable, lightweight form factor, delivering enhanced productivity and efficiency while reducing your total cost of ownership (TCO).

HIGH PERFORMANCE SCANNING — FAST
With aggressive scanning capabilities and a wide working range, the LS2208 accurately captures data fast, helping employees work quickly and efficiently. And you'll be up and running fast, because the LS2208 is easy to deploy and use, thanks to its plug-and-play installation and intuitive, user-friendly design, which requires little or no training. Plus the ergonomic, balanced form factor reduces user fatigue to maximize user comfort.

DURABLE, FUTURE-PROOF CONSTRUCTION
The LS2208 is engineered for continuous, heavy usage all day, every day and has been tested to withstand multiple 5 ft./1.5m drops to concrete. The patented single board construction eliminates a common point of failure the interconnection between multiple boards – and the patented frictionless liquid polymer scan element delivers integral shock protection to further ensure reliable operation. Scratch-resistant tempered glass helps preserve bar code scanning accuracy. Integrated multiple interfaces, universal cable compatibility and support for emerging symbologies provide the investment protection you need to help ensure that the scanner you buy today will work with the system you use tomorrow.

PROVEN QUALITY YOU CAN TRUST
When you choose the LS2208, you receive the added assurance of purchasing a product from Zebra — the global leader in handheld bar code scanning with millions of scanners in use every day by the world's largest retailers worldwide. And since even the most reliable scanners require a support plan, Zebra's Service from the Start Advance Exchange Support provides next-business-day delivery of a replacement device for true service peace of mind. This offering also includes Zebra's unique Comprehensive Coverage, which extends normal wear and tear to cover accidental damage to exit windows, scan elements, housings and more at no extra charge.

FEATURES

Durable construction: single board construction; meets Zebra's stringent 5 ft. drop tests; scratch-resistant tempered glass exit window
Designed for continuous usage all day, every day; significantly reduces downtime and repair costs

High performance 1-D laser scanner
Accurate first time scanning; always ready for the next scan; increased productivity resulting in shorter check-out lines and better customer service

Wide working range: contact to 17 in./43 cm on 100% UPC/EAN symbols
Improves productivity

Multiple interfaces available
Simplifies installation and integration; future-proof solution helps ensure compatibility with your host/POS today and tomorrow

Plug-and-play; universal cable; intuitive scanning
Rapid deployment; single cable connects to any computing environment; practically eliminates setup and training time for faster return on investment

Ergonomic and lightweight design
Reduces user fatigue with sleek, balanced form for maximum user comfort and productivity

Hands-free Intellistand™
Enables presentation scanning and easy switching between hands-free and handheld modes

Advanced Data Formatting (ADF)
Enables users to modify data prior to sending to host computer, reducing costly modifications to the host software

RELIABLE SCANNING AND PROVEN QUALITY YOU CAN TRUST.

Functional Specifications			
Image sensor type		Color CIS (Contact Image Sensor) x 2 (front x 1, back x 1)	
Output resolution	Color (24-bit), Grayscale (8-bit), Monochrome (1-bit) [1]	50 to 600 dpi, 1200 dpi [2,3]	
Halftone Patterns		4 dither patterns and error diffusion	
Grayscale		8-bit/256 level	
Color		24-bit/16,777,216 single pass color	
Performance			
Scanning speeds	200 or 300 dpi, Letter, Color, Grayscale and Monochrome [4]	Simplex 27 ppm [5,6]	Duplex 54 ipm [5,6]
Scanning modes		Simplex and Duplex	
Document feeding method		Automatic Document Feeder (ADF)	
ADF capacity [7]		50 Sheets (A4: 20 lb. or 80 g/m^2)	
Document Size	ADF minimum	2 in. x 2 in. (51 mm x 51 mm)	
	ADF maximum	Legal Portrait (8.5 in. x 14 in. or 216 mm x 356 mm)	
	Long page scanning	8.5 x 220 in. (216 x 5,588 mm)	
Interface		USB 2.0 (1.1 compatible)	
JPEG compression		Hardware real-time JPEG compression available	
Physical Specifications			
Power Requirements (auto-switching)		100 to 240 VAC, 50/60 Hz	
Power Consumption		17 W or less	
Operating Environment	Temperature	42° F to 95° F (5° C to 35° C)	
	Relative Humidity	20 % to 80 % (non-condensing)	
Dimensions (W x D x H)		290 x 146 x 130 mm (11.41 x 5.74 x 5.11 in.)	
Weight		2.9 kg (6.4 lb)	
Inbox Contents		AC cable & adapter, USB cable, Setup DVD-ROM	
Bundled Software (DVD format)		PaperStream IP (TWAIN/ISIS) Driver, 1D Barcode for PaperStream (Download), Software Operation Panel, Error Recovery Guide, PaperStream Capture, Scanner Central Admin Agent	
Enviromental designations [9]		ENERGY STAR 2.0®, RoHS, EPEAT Silver	
Options		Carrier Sheet	
OS Support		Windows® 10 (32-bit/64-bit), Windows® 8.1/8 (32-bit/64-bit), Windows® 7 (32-bit/64-bit), Windows Vista® (32-bit/64-bit), Windows Server® 2012 R2 (64-bit), Windows Server® 2012 (64-bit), Windows Server® 2008 R2 (64-bit), Windows Server® 2008 (32-bit/64-bit)	
Features		Ultrasonic Intelligent MultiFeed Function Double Feed Detection and Long Document Scanning [10]	

Fast and compact, the fi-7030 is capable of scanning a wide range of paper and features our great PaperStream drivers and software to make your workload easier to manage.

Meet the full-featured entry-level professional scanner from Fujitsu

- Starts up in 1 second from sleep mode
- Powers through your documents at up to 54 images per minute
- Capable of scanning sticky notes, taped receipts, and labels without misfeeding
- Supports documents up to 220" long

Intelligent image processing with PaperStream IP

PaperStream IP (PSIP) is a TWAIN/ISIS®-compliant driver that cleans up and optimizes scanned images without any advance settings. PSIP features:

- **Auto Color Detection** to automatically identify the best color mode for the document
- **Auto Deskew** to automatically corrects skewed images
- **Blank Page Detection** to automatically remove blank pages
- **Front and Back Merge** to place two sides of a page into one convenient image
- **Automatic hole punch removal**

PaperStream Capture makes scanning fast and easy

Eliminate the learning curve. PaperStream Capture's user-friendly interface allows easy operation from start to finish. Changing scan settings is simple. Indexing and sorting features include barcode, patch code, and blank page separation – making batch scanning a breeze for operators.

Centralized fleet management

Includes Scanner Central Admin to remotely manage your entire fi Series fleet.
Effectively allocate your resources based on scan volume, consumables wear, and more.

Make it even better with PaperStream Capture Pro

Optional **PaperStream Capture Pro** software offers superior front-end capture, image processing, and options for enhanced data extraction and indexing for release.

1 Maximum output resolutions may vary, depending upon the size of the area being scanned and whether the scanner is scanning in simplex or duplex **2** Software interpolated **3** Scanning limitations brought about by scanning mode, document size and available memory may occur when scanning at high resolutions (600 dpi or higher) **4** Intel® Core™ i5 desktop processor 2.5 GHz or higher, 4 GB RAM is recommended **5** Actual scanning speeds are affected by data transmission and software processing times **6** JPEG compressed figures **7** Maximum capacity varies,depending upon paper thickness **8** Excluding the ADF hopper **9** PFU Limited, a Fujitsu company, has determined that this product meets RoHS requirements (2005/95/EC) **10** Capable of scanning documents that exceed A4 sheets in length. However, the scanning of documents longer than 34" requires lower resolution (200 DPI or less)

Container Options

2 , 3 & 4 Gallon Containers

Code # C-02RES-0203, C-03RES-0203, C-04RES-04

Our **2, 3 & 4 gallon containers** are appropriate for patient rooms and medication areas where security and convenience are critical. The fill line and contents are readily visible through the container's large window.

8 Gallon Container

Code # C-08-2004LR

For increased capacity, the **8 gallon container** is utilized in intensive care, pharmacies, labs and the ER.

17 Gallon Container

Code # C-17

The **17 gallon container** is appropriate for the OR, ER and labs where a higher volume of sharps waste is generated.

EV Innovative Design

EVID C8.2LP Ceiling

8” Two-Way Coaxial Ceiling Loudspeaker System

Step Up To Electro-Voice®

Key Features:

- **Low Profile 8" coaxial two-way**
- **Waveguide coupled Ti Tweeter**
- **Full bandwidth overload protection**
- **Front baffle wattage tap adjustment**
- **Integrated low loss matching transformer allows for either 70v/100v or 8-ohm operation**
- **Includes tile bridge and mounting ring for easy installation**
- **Integrated ported enclosure for extended bass response**
- **Ideal for ceiling spaces with tight clearance**

General Description:

The Electro-Voice ® EVID C8.2LP loudspeaker system is a complete two-way ceiling loudspeaker in a low profile package. The package consists of a bezel assembly, grille, rear enclosure, 8-inch coax two-way loudspeaker and internal line-matching transformer. The loudspeaker features a waveguide coupled titanium coated dome tweeter. The EVID C8.2LP loudspeaker utilizes a 2nd order crossover network at 2.5 kHz, with a comprehensive protection circuit to protect the network, woofer, and tweeter drivers from excessive power levels. The C8.2LP utilizes a transformer that offers a selection of 1.88 (70-V only), 3.75, 7.5, 15 or 30 watts delivered to the loudspeaker system using either 70-V or 100-V lines, or 8 ohm bypass. Selection is via a convenient switch on the front baffle. The perforated grille is finished in semi-gloss white powder-coated enamel. The baffle and bezel are constructed from UL 94V-0 rated ABS. The rear enclosure is constructed from zinc-plated, heavy gauge steel. The low profile enclosure makes it easy to mount in tight spaces. A rear cover, with provisions for a junction box fitting, provides access to a 4-pin terminal block that allows direct connection to the speaker with 12 gauge wire and provides pass through to additional speakers. A tile bridge is included for safe suspension of the C8.2LP ceiling systems in a drop ceiling that uses mineral wool, or other fiber-based ceiling tiles. The EVID line of ceiling speakers has been designed to work together as a complete system in a wide range of different ceiling constructions. They provide wide dispersion, high-efficiency, high-maximum output, ease of installation, and wide-range reproduction of music or voice.

Technical Specifications:

Freq. Response (-10 dB):	50 Hz - 20 kHz
Coverage (Conical):	110°
Power Handling:	100 W Cont. / 400 W Peak
Sensitivity (SPL 1W/1m):	91 dB
Max Calculated SPL:	117 dB
Impedance:	8 Ohms nominal (transformer bypass)
Network:	Network and transducers protected, 12 dB/oct 2.6 kHz
LF Transducer:	8 in. (200 mm) Polypropylene cone
HF Transducer:	1 in (25 mm) Ti Mylar laminate
Transformer Taps:	70V: 1.88, 3.75, 7.5, 15 or 30W 100V: 3.75, 7.5, 15 or 30W Bypass: 8 Ohms
Connectors:	Phoenix type removable, with screw terminals and "loop-thru", accepts 12 ga wire
Enclosure Material:	Baffle- UL 94V-O rated ABS Backcan-Zinc plated steel
Grille:	Perforated powder coated steel with safety tether
Support Hardware:	Tile bridge, backing plate support, cutout template, paint shield
Dim (H x Dia.):	7.0" x 10.6" (178mm x 270mm)
Cutout Size:	10.8" (274mm)
Net Weight (each):	11.0 lbs (5.0 kg)
Shipping Weight (pair):	24.0 lbs (11.0 kg)

All Specifications based on Half Space Environment in ceiling.

Architects' & Engineers' Specifications:

The EVID C8.2LP loudspeaker system shall be comprised of a UL 94V-0 fire rated ABS baffle/bezel assembly, zinc plated steel rear enclosure, powder coated grille with safety tether, transformer with 8 ohm bypass, and 8-inch polypropylene low frequency transducer with coaxially-mounted waveguide coupled 1 inch titanium coated dome tweeter. The loudspeaker shall meet the following criteria: power rating shall be 100 watts of EIA RS-426A pink noise (6 dB crest factor). Frequency response, uniform from 50 Hz to 20 kHz. Pressure sensitivity, 91dB SPL at 1 meter (3.3 feet) on axis with one watt of pink noise (ref. 20µPa). Minimum impedance, 6.0 ohms. The loudspeaker shall be 178 mm (7.0 in.) deep and 270 mm (10.6 in.) in diameter. Weight shall be 5.0 kg. (11.0 lb) The coaxial ceiling loudspeaker shall be the Electro-Voice ® model EVID C8.2LP.

FOR THE FIRST TIME IN OUR 63 YEAR HISTORY, WE ARE OFFERING OUR PRODUCT LINE DIRECT! NO MIDDLEMAN, JUST QUALITY AND MAXIMUM SAVINGS TO YOUR FACILITY.

#2006

The #2006 is the classic single pump IV stand. All steel double chrome plate construction ensures long term reliability in the hospital environment.

- 23" diameter, all steel five-point base with Nickel Chrome Plate Finish
- 3" premium roller blade casters
- Double chrome plated 1" to 7/8" telescoping upright with posi-lock coupling to eliminate slippage.
- Four hook ram's horn type solution holder
- Height Range 68" to 108"
- Weight: 20 lbs
- Base and pole shipped in separate boxes

#1099

The #1099 is a small foot print Heavy Duty IV stand designed to support multiple pumps.

- 22" diameter, low center of gravity castbase
- 3" premium roller blade casters
- Double chrome plated 1.25" to 1" telescoping upright with posi-lock coupling to eliminate slippage
- Four hook ram's horn type solution holder
- Height Range 70" to 110"
- Weight: 34 lbs
- Base and pole shipped in separate boxes

#3099

The #3099 is a low center of gravity Heavy Duty IV stand appropriate for Multiple pumps on its twin uprights.

- 22" diameter, low center of gravity cast base
- 3" premium roller blade casters
- Dual double chrome plated 1.25" to 1" telescoping upright with posi-lock coupling to eliminate slippage.
- Dual four hook ram's horn type solution holders
- Height Range 85" to 110"
- Weight: 40 lbs - Base and pole shipped in separate boxes

Stools & Cha

Designed and manufactured to exceed your expectations

It begins with a wide, five-leg caster base that provides support and stability. The star-shaped base allows closer accessibility to the patient while heavy duty, dual-wheel, hooded casters enable stools to maneuver quietly over all types of surfaces.

Adding to the strength and stability of our stools is the solid steel machine screw on manual models, or air cylinder on pneumatic models. The air cylinder further acts as a built-in shock absorber, taking the abuse of a hard day's work instead of you, and presents a simple and efficient method for adjusting the seat height (ideal for multi-physician practices).

Comfort is provided in the form of a wide, amply padded seat section constructed of dense foam. A beadless upholstery seam eliminates the seat edge from digging into your legs. Add a backrest to promote better posture and support to leave you feeling less fatigued at day's end.

With many choices, colors and accessories, there is certain to be a stool just right for you.

276 Air Lift Stool

Our best selling stool! The 276 has become the industry standard in healthcare facilities.

Classic Series Stools

The healthcare industry's most demanded stools and the foundation of our seating product line. The Classic Series features a polished aluminum/black accented five-leg caster base and hood and a hand ring or foot lever height control on pneumatic models. The seat height of the 274 (without back) and 275 (with back) adjusts manually while the 276 (without back) and 277 (with back) adjusts pneumatically. The 278 (foot lever) and 279 (hand ring) offer pneumatic height adjustment and a surgical armrest to stabilize the surgeon's arm during delicate procedures.

PEDIGO

stretcher series
7500
transport / trauma stretcher

iS6™ six wheel steering

THE GUARDIAN TRANSPORT STRETCHER

stretcher series

7500

trauma / transport stretcher

Pedigo's 7500 Series Stretcher allows for the transfer of patients easily and comfortably with a load capacity up to 750 pounds. Superior stability, mobility, and braking capabilities make the 7500 versatile for all your department needs such as OR, ED, PACU, Patient Transportation, Radiology or Cath Lab.

1

RAIL SYSTEM:

Full length stainless steel side rails feature integrated push-pull handles with latch releases located at all four corners of the stretcher. Easy one-handed operation. No hinges, mechanical connections or plastic couplings to trap debris or fluid. Easy to wipe clean and disinfect.

2

O_2 TANK HOLDER:

Pedigo's ergonomic Quick-Release O_2 Tank Holder is side-mounted and conveniently located under the patient surface to reduce caregiver bending. (US Patent 7,865,984 B2)

3

SIX WHEEL STEERING:

The two Instant Steer wheels are centered directly under the chassis for increased control and maneuverability. Dual ball bearing wheels feature a softer wheel tread for improved grip and traction.

4

CENTER COLUMN SUPPORT:

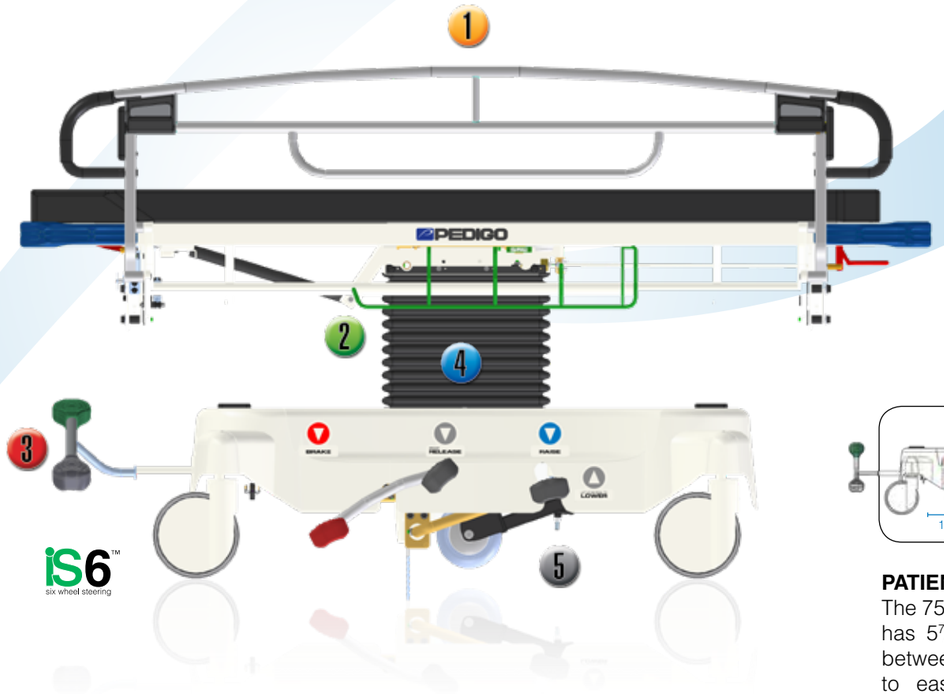
Sturdy steel column with single hydraulic lift cylinder design uses sixteen precision ball-bearings to smoothly raise and lower the patient.

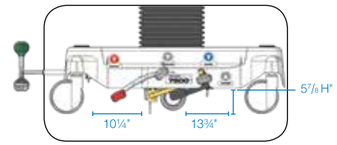
5

HYDRAULIC PEDALS:

Hydraulic foot pedals are located on each side of the stretcher within the patient care zone. Color-coded pedals and function graphics are quickly and easily understood.

PEDIGO®





PATIENT LIFTS:

The 7500 Series Stretcher has 5⅞"H of clearance between floor and cowling to easily accommodate and utilize patient lifts.

CUVERRO®

BACTERICIDAL COPPER SURFACES

Now as an added protection in the ongoing battle with bacteria, Pedigo offers the option of side rails made from CuVerro® **bactericidal copper alloy**.

Copper is an intrinsic antimicrobial element and CuVerro® is the ***ONLY*** solid touch surface metal registered by the EPA to continuously kill bacteria[1] that cause infections and pose a risk to human health. Lab tests show more than 99.9% of bacteria[1] associated with disease and infection, including MRSA[1], are killed within two hours when in contact with copper. Bacteria will continue to be killed 24 hours a day, week after week, between regular cleanings.

[1] CuVerro® alloys have proven effectiveness on MRSA (Methicillin-Resistant Staphylococcus aureus), Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, and Escherichia coli 0157:H7 and VRE (Vancomycin-Resistant Enterococcus). CuVerro is a registered trademark of GBC Metals LLC, d/b/a Olin Brass.

THE GUARDIAN

TRAUMA / TRANSPORT STRETCHER

with CuVerro® Side Rails

7500 Series GUARDIAN Package
includes:

- CuVerro® Side Rails
- 7500 Transport Stretcher
- Quick-Release™ O_2 Tank Holder
- 4" Blue Premium Mattress
- **iS6** Instant Steer 6th Wheel Steering
- Fold Down IV pole
- IV Caddy

*Because stretcher side rails should **protect**,*
not infect.

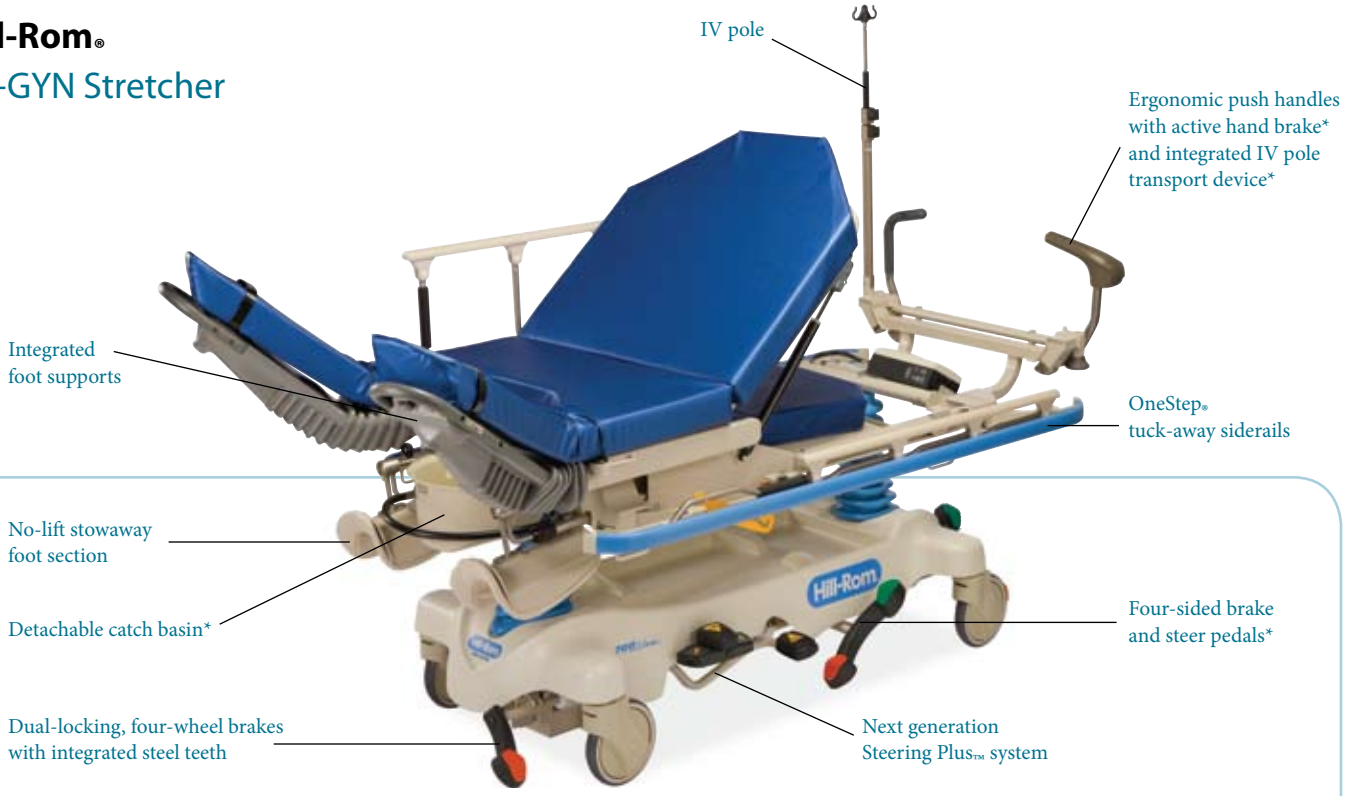
Hill-Rom®

OB-GYN Stretcher



At a glance

Hill-Rom stretcher key features:

- **700 lb weight capacity**
- **Sliding litter** enables quick and easy patient positioning
- **Stowaway foot section** eliminates heavy lifting and storage concerns
- **Integrated foot supports** save time by eliminating the need to search for stirrups and calf supports
- **Integrated catch basin***, combined with patient grip handles, offers convenience and saves time
- **Next generation Steering Plus™** system for crisp cornering and control
- **Dual-locking four-wheel brakes** for a strong, stable platform
- **Power washable**
- **Three year parts warranty** and lifetime frame weld warranty

* Optional feature

Hill-Rom® OB-GYN Stretcher

With its fast and easy patient positioning, Hill-Rom's OB-GYN stretcher (P8050) is ideal for use in both maternity and emergency. Built to last year after year, this stretcher offers outstanding mobility, convenience and quality.

Mobility. Why struggle to steer and stop? An optional active hand brake reduces strain of going down ramps and sudden stops. Our integrated IV pole transport device helps you to maneuver stretcher and IV pole stands with ease. The next generation Steering Plus™ system allows crisp cornering and control.

Convenience. Save time with this stretcher's integrated foot supports, sliding litter and optional catch basin. Reduce heavy lifting and storage concerns with our stowaway foot section. An optional built-in fiber optic exam light eliminates searching for another piece of equipment.

Quality. Our reinforced frames are made of heavy-gauge, automotive grade steel for long-lasting quality — and a 700 lb weight capacity to handle higher patient weights. Nickel-plated push handles, IV poles, siderails and other components offer superior rust resistance, even in harsh environments.

Model: Horizontal Recessed Stainless Steel KB310-SSRE

Item ID: TA-14

Wall mounted infant changing station. Features: One-piece, deep-drawn, uniform grain stainless steel components eliminate seams, sharp edges and weld lines, and provide a modern visual aesthetic. Thoughtful patron amenities enhance the end-user experience, and include Microban product protection, laser etched logo, a redesigned liner dispenser and a convenient stainless steel bag hook for safely storing a diaper bag off the floor. The dual liner cavity has an internal spring tab that pushes liners forward while only allowing single liner dispensing. Each cavity holds 25 liners and locking mechanism minimizes operator refills and discourages potential vandalism. The product includes child protection straps and bag hooks. Bed surface exclusively contains Microban antimicrobial, reducing odor causing bacteria.

KB310-SSRE Horizontal Stainless Steel Recessed-Mounted Baby Changing Station

Information

Material

Grey injection-molded polypropylene with Microban® antimicrobial additive embedded into the bed surface. Reinforced steel-on-steel hinge mechanism and plated or powder coated steel mounting chassis with mounting hardware included. Satin finished 304 stainless steel deep drawn outer shell and recessed pan. Injection molded aluminum handles with satin stainless steel finish. Solid stainless steel external bag hook. Labeled usage instructions and safety messages. Contoured changing surface area 535 sq. In (3452 sq. cm) and comes complete with safety strap. Dual cavity liner dispenser holds approximately 50 KB150-99 bed liners.

Note: For EN 12221:2008+A1:2013 compliant units a safety strap can not be provided with the unit. Should you require one, it can be ordered separately P/N 310-44-KIT.

Operation

Concealed pneumatic cylinder and metal mounting chassis provides controlled, slow opening and closing of bed. Polypropylene is easy to clean and resists odors and bacterial growth. Complies with ASTM static load performance requirements when properly installed. Internal liner dispenser with integrated spring tab dispensed one liner at a time. Handles guide patron to operate unit with less than 5lbs of force and act as cane detection if unit is left in open (down) position.

Warning: To ensure that the unit supports the intended loads, baby changing stations must be properly installed according to the manufacturer's instructions.

Specification

Baby changing station shall have durable, single piece deep drawn 304 satin finished stainless steel outer shell and recessed pan, with injection-molded polypropylene interior. Design of unit shall be recess-mounted. Unit shall be equipped with a pneumatic cylinder for controlled opening and closing of bed. Bed shall be secured to metal mounting chassis with a concealed steel-on-steel hinge. No hinge structure shall be exposed on interior or exterior surfaces. Unit shall have mounting hardware included. Unit shall have Microban® antimicrobial embedded into plastic material on the changing surface. Unit shall fully comply with ADA regulations when properly installed. Bed shall have smooth concave changing area with a safety strap and external stainless steel hook for bags or purse provided.

The design and manufacture of Koala products is intended to be compliant with the 2010 ADA Standards for Accessible Design and the 2009 ICC A117.1, Accessible and Usable Buildings and Facilities. Unit shall conform to ASTM F2285-04(16) Standard Safety Performance Specification for Diaper Changing Tables for Commercial Use, ANSI Z535.4 Product Safety Signs and Labels, EN 12221:2008+A1: 2013. Unit shall have a built-in Liner Dispenser for use with 3-ply chemical free biodegradable bed liners, instructional graphics and safety messages in 4 languages. Unit shall be backed by manufacturer's 5-year limited warranty on materials and workmanship and include a provision for replacement caused by vandalism.

Unit shall be manufactured in the U.S.A.

ADA Requirements

Additional information on how this product complies with ADA requirements can be found in the KB310 & KB311 Baby Changing Stations Accessibility Compliance document on **www.koalabear.com**.

The illustrations and descriptions herein are applicable to production as of the date of this Technical Data Sheet. The manufacturer reserves the right to, and does from time to time, make changes and improvements in designs and dimensions without notice.

Cambiador para bebés KB310-SSRE
Información

Material

Polipropileno gris moldeado a inyección con aditivo antimicrobiano Microban® incorporado en la superficie de la plataforma. Mecanismo con bisagra de acero sobre acero y chasis de montaje de acero revestido o recubierto en polvo con tornillería de montaje. Carcasa exterior y bandeja empotrada con dibujo profundo de acero inoxidable 304 con terminación satinada. Manijas de aluminio moldeado a inyección con terminación satinada de acero inoxidable. Gancho externo para el bolso de acero inoxidable macizo. Instrucciones de uso etiquetadas y mensajes de seguridad. El área de la superficie para cambiar al bebé con contorno es de 535 in2 (3452 cm2) y trae una correa de seguridad. El dispensador de protectores de dos cavidades puede alojar hasta aproximadamente 50 protectores para la plataforma KB150-99.

Nota: Para las unidades que cumplen con EN 12221:2008+A1:2013, no se puede proporcionar una correa de seguridad con la unidad. Si necesita uno, se puede pedir por separado P/N 310-44-KIT.

Funcionamiento

El cilindro neumático oculto y el chasis de montaje metálico ofrecen una apertura y un cierre controlados y lentos de la plataforma. El polipropileno es fácil de limpiar y resiste olores y crecimiento bacteriano. Cumple los requisitos de desempeño para cargas estáticas de ASTM cuando está instalado correctamente. El dispensador de protectores interno con lengüeta a resorte integrada dispensa de a un protector por mes. Las manijas guían el patrón para operar la unidad con menos de 5 lb de fuerza y actúan como lugar detección mediante un bastón si la unidad se deja en posición abierta (hacia abajo).

Advertencia: Para asegurar que la unidad sostenga las cargas previstas, los cambiadores deben instalarse correctamente según las instrucciones del fabricante.

Especificaciones

El cambiador para bebés tiene una carcasa exterior y una bandeja empotrada resistentes de una pieza con dibujo profundo de acero inoxidable 304 con terminación satinada, con un interior de polipropileno moldeado a inyección. El diseño de la unidad es montado empotrado. La unidad está equipada con un cilindro neumático para abrir y cerrar la plataforma de manera controlada. La plataforma está fija al chasis de montaje metálico con una bisagra de acero sobre acero oculta. No hay ninguna estructura de bisagra expuesta en las superficies interior ni exterior. La unidad incluye la tornillería de montaje. La unidad tiene el antimicrobiano Microban® incorporado en el material plástico de la superficie para cambiar al bebé. Cuando se instala correctamente, la unidad cumple completamente las normas de la ley ADA. La plataforma tiene un área cóncava para cambiar al bebé con una correa de seguridad y un gancho de acero inoxidable externo para el bolso.

Está previsto que el diseño y la fabricación de los productos Koala cumplan las normas para el diseño accesible de 2010 de la ley ADA e ICC A117.1 Edificios e instalaciones accesibles y utilizables 2009. La unidad cumple la especificación de desempeño estándar en seguridad de ASTM para las mesa para cambiar pañales para uso comercial, F2285-04(16), y de letreros y etiquetas de advertencia de los productos ANSI Z535.4, EN 12221:2008+A1: 2013. La unidad tiene un dispensador de protectores incorporado para utilizarse con protectores biodegradables de 3 pliegues y sin químicos para la plataforma, gráficos instructivos y mensajes de seguridad en 4 idiomas. La unidad cuenta con el respaldo de la garantía limitada del fabricante durante 5 años para material y mano de obra e incluye una disposición para el reemplazo causado por el vandalismo.

La unidad se fabrica en los EE. UU.

Requisitos según la ADA

Hay información adicional sobre las maneras en que este producto cumple con la ADA en el documento titulado *KB310 & KB311 Baby Changing Stations Accessibility Compliance* (Cumplimiento de la accesibilidad de los cambiadores para bebés KB300 y KB301) en **www.koalabear.com**.

Las ilustraciones y las descripciones que se incluyen corresponden a la producción a la fecha de esta ficha de datos técnicos. El fabricante se reserva el derecho de hacer modificaciones y mejoras en los diseños y en las dimensiones sin previo aviso, algo que lleva a cabo de cuando en cuando.

KB310-SSRE Babywickeltisch
Informationen

Material

Graues, spritzgegossenes Polypropylen mit Microban®-antimikrobiellen Zusatzstoffen in der Bettoberfläche. Verstärkte Stahl-auf-Stahl-Scharniere und beschichtetes oder pulverbeschichtetes Edelstahlchassis mit Befestigungsteilen enthalten. Äußere Schale aus tiefgezogenem Edelstahl CrNi18-8 (1.431) mit mattem Finish und versenkte Wanne. Spritzgegossene Aluminiumgriffe mit matt geschliffenem Edelstahl-Finish. Externer Beutelhaken aus Edelstahl. Mit Benutzeranweisungen und Sicherheitshinweisen. Konturierte Wickeloberfläche misst 3452 cm^2 und umfasst einen Sicherheitsgurt. Integrierter Auflagenspender, der ca. 50 KB150-99 Hygieneauflagen fasst.

Hinweis: Für EN 12221:2008+A1:2013 konforme Geräte kann kein Sicherheitsgurt mit dem Gerät geliefert werden. Sollten Sie einen benötigen, kann dieser separat bestellt werden P/N 310-44-KIT.

Bedienung

Konstruktion mit verdecktem pneumatischem Zylinder und Metallchassis ermöglicht ein reguliertes, langsames Öffnen und Schließen des Betts. Polypropylen ist pflegeleicht und ist beständig gegen Geruch und Bakterienwachstum. Bei vorschriftsmäßiger Anbringung entspricht die Wickelstation den ASTM-Anforderungen für statische Belastung. Interner Überzugspender mit integrierter federbelasteter Raste spendet pro Betätigung einen Überzug. Die Griffe ermöglichen es dem Benutzer, die Einheit mit einem Kraftaufwand von unter 2,5 kg zu bedienen, und dienen zur Erkennbarkeit mit einem Stock, wenn das Gerät in der offenen (unteren) Position belassen wird.

Warnung: Um zu gewährleisten, dass die Einheit den beabsichtigten Belastungen standhält, müssen Babywickelstationen gemäß der Herstelleranleitung installiert werden.

Technische Beschreibung

Babywickeltisch mit einteiliger äußerer Schale aus tiefgezogenem Edelstahl CrNi18-8 (1.431) mit mattem Finish und versenkte Wanne mit spritzgegossenem Polypropylen-Innenteil. Die Einheit ist zum Wandeinbau vorgesehen. Die Einheit ist mit einem pneumatischen Zylinder zum geregelten Öffnen und Schließen des Betts ausgerüstet. Das Bett wird mit einem verdeckten Stahl-auf-Stahl-Scharnier am Metallchassis befestigt. Kein Teil der Scharnierkonstruktion liegt an inneren oder äußeren Oberflächen frei. Der Einheit liegen Befestigungsteile bei. Das Kunststoffmaterial auf der Wickeloberfläche ist mit antibakteriellem Microban®-Schutz ausgerüstet. Die Einheit entspricht bei vorschriftsmäßiger Installation vollständig den ADA-Bestimmungen. Das Bett hat einen glatten, konkaven Wickelbereich mit einem Sicherheitsgurt und einem externen Haken für Beutel oder Taschen.

Design und Herstellung der Koala-Produkte erfolgt gemäß den 2010 ADA Standards for Accessible Design und 2009 ICC A117.1, Accessible and Usable Buildings and Facilities. Die Einheit entspricht den folgenden Normen: ASTM F2285-04(16) Standard Safety Performance Specification for Diaper Changing Tables for Commercial Use, ANSI Z535.22 Product Safety Signs and Labels, EN 12221:2008+A1 2013. Die Einheit hat einen integrierten Auflagenspender zur Verwendung mit 3-lagigen, chemikalienfreien, biologisch abbaubaren Hygieneüberzügen, Anleitungsabbildungen und Sicherheitshinweise in 4 Sprachen. Für die Einheit wird eine 5-jährige beschränkte Herstellergarantie für Material- und Herstellungsfehler und eine 5-jährige Ersatzgarantie für Vandalismus gewährt.

Die Einheit wird in den USA hergestellt.

ADA-Anforderungen

Zusätzliche Informationen dazu, wie dieses Produkt die ADA-Anforderungen erfüllt, sind im Dokument *KB310 & KB311 Baby Changing Stations Accessibility Compliance* (KB310 & KB311 Babywickeltische – Erfüllung der Vorgaben für eine barrierefreie Bedienung) auf **www.koalabear.com** zu finden.

Die Abbildungen und Beschreibungen in diesem Datenblatt beziehen sich auf Produkte, wie sie zu dem in diesem technischen Datenblatt angegebenen Datum hergestellt wurden. Der Hersteller behält sich das Recht vor, von Zeit zu Zeit Änderungen und Verbesserungen an Konstruktion und an den Abmessungen vorzunehmen.

SureTemp Plus 692—setting the standard of care

ID field for electronic labeling of thermometer

User-selectable icon and/or words for identification of thermometer mode

Battery life indicator

Interchangeable probe with push-button probe cover ejection

Removable probe well for easy cleaning

C/F button for toggling between Fahrenheit and Celsius

Prominent recall button for display of last temperature taken

Ergonomic design with rubberized grips

Convenient storage for 25 probe covers

Large, easy-to-read, backlit LCD

Mode button for selecting oral, pediatric axillary or adult axillary

Pulse timer button/ monitor mode

NEW feature makes it easier to switch to Monitor Mode for measuring a patient's thermal steady state (approx. 3 to 5 minutes)

Interchangeable rectal probe and well reduce risk of cross-contamination

The **SureTemp Plus 692** with **standard wall mount** has storage for an additional 50 probe covers.

The **SureTemp Plus 692**—setting the standard of care even higher

SureTemp Plus 692 Product Specifications		
Calibration Accuracy	±0.2 °F (±0.1 °C) (Monitor Mode)	
Temperature Predict Time	Oral: **Adult Axillary** (18 years and older): **Pediatric Axillary** (17 years and younger): Rectal:	Approximately 4-6 secs Approximately 12-15 secs Approximately 10-13 secs Approximately 10-13 secs
Unit Dimensions	8.46" x 3.18" x 2.43" (215 mm x 81 mm x 62 mm)	
Weight	12.6 oz (357 g)	
Ambient Temperature Range	50.0 °F (10 °C) to 104 °F (40.0 °C)	
Patient Temperature Range	80.0 °F (26.7 °C) to 110 °F (43.3 °C)	
Power Source	(3) 1.5Vdc AA batteries	
Battery Life	Approximately 5,000 temperatures

				Total:	**3**	

Specification	TAT-5000
Clinical Accuracy	± 0.2°F or 0.1°C Per ASTM E1112
Temperature Range	61 to 110°F (16 to 43°C)
Arterial Heat Balance Range for Body Temperature*	94 to 110°F (34.5 to 43°C)
Operating Environment	60 to 104° F (16 to 40°C)
Resolution	0.1°F or C
Response Time	~ 0.04 seconds
Battery Life	15,000 readings**
Time Displayed on Screen	30 seconds
Size	2.0" x 8.0" x 1.25" (5 cm x 20 cm x 3 cm)
Weight	7.9 oz. (223 g)
Display Type and Size	Large bright LED's
Construction Method	• Industrial duty impact resistant casing • Hermetically sealed sensing system • Stainless steel probe

Complies with EN 60601-1 3rd edition

*Automatically applied when temperature is within normal body temperature range, otherwise reads surface temperature.

** Approximate number of readings when scanning for 5 seconds and reading the temperature display for 3 seconds before turning thermometer off.

UL Listed Ultra HD Hospital TV

UT672M Series

Commercial Lite	Pro:Centric	Pro:Centric Enhanced	**Pro:Centric Smart**

The UT672M Hospital TV series provides advanced technology designed to meet the needs of patients and staff. A cost-effective solution for healthcare facilities, the TV features include Pillow Speaker support and Hospital UL Certification, which are designed to enhance patient-centered care.

LG | Business Solutions

UL Listed Ultra HD Hospital TV

UT672M SERIES

FEATURES FOR THE HOSPITAL ENVIRONMENT

Pillow Speaker Ready

Audio and video can be controlled directly by a pillow speaker for patient convenience.*

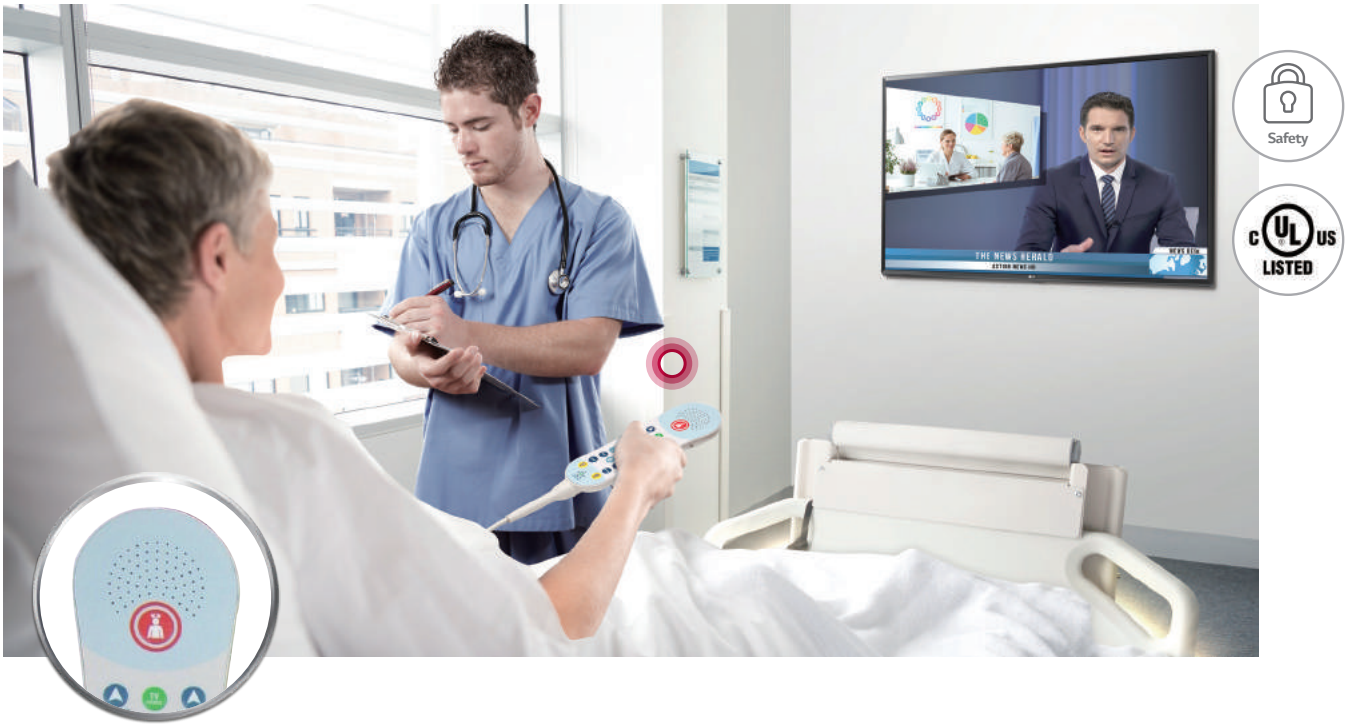
* Requires third-party pillow speaker.

Nurse Call System

Improve patient care and staff response with this reliable nurse call system using a pillow speaker. Hospital staff can quickly and easily be called when needed.

UL Hospital Grade Listed

The UT672M series is UL listed for use in healthcare and hospital environments.



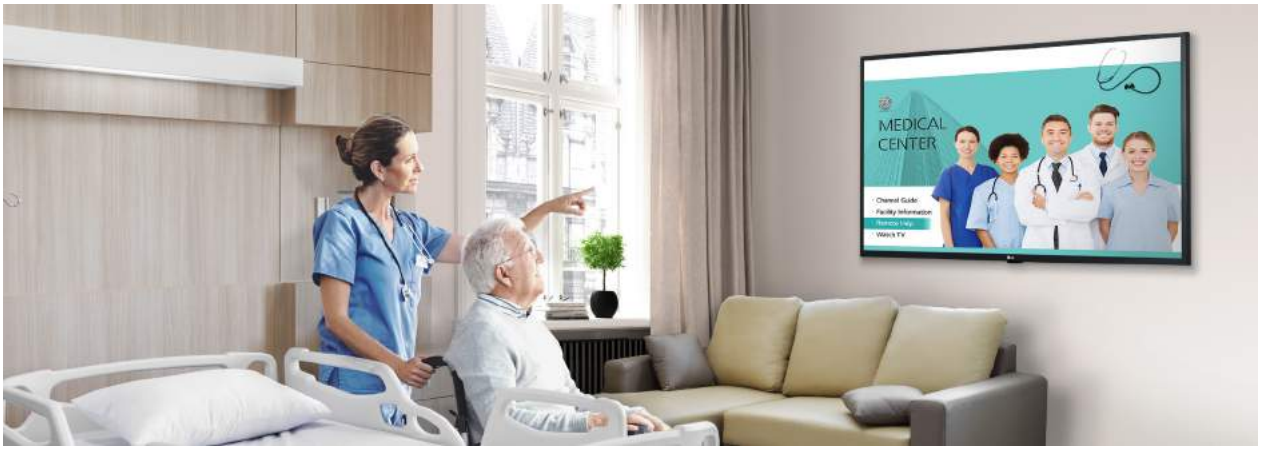
UL Listed Ultra HD Hospital TV

UT672M SERIES

FEATURE HIGHLIGHTS

Pro:Centric Application Platform

An industry-leading television that supports the Pro:Centric platform, LG's new UT672M Series allows healthcare facilities to customize the patient room experience. The Pro:Centric application enables the UT672M to provide an interactive program guide and display facility information, such as dietary menus and patient room information.*



* May require additional software and hardware to support third-party partner interactive systems or LG's Free-to-Guest Mode / Pro:Centric application

First Use Wizard

The First Use Wizard offers quick configuration options including Express Script, which allows you to easily enable and configure Hospital Mode features.

Pro:Idiom

Digital Rights Management (DRM) technology unlocks access to premium content to help assure rapid and broad deployment of HDTV and other high-value digital content.

Above screen image is simulated.

UL Listed Ultra HD Hospital TV

UT672M SERIES

FEATURE HIGHLIGHTS

Ultra HD 4K Resolution

UHD delivers a resolution four times higher than that of Full HD, creating a more realistic and immersive television viewing experience. The stunning 8.3 million pixels create flawless images with incredibly vivid detail.

Instant On

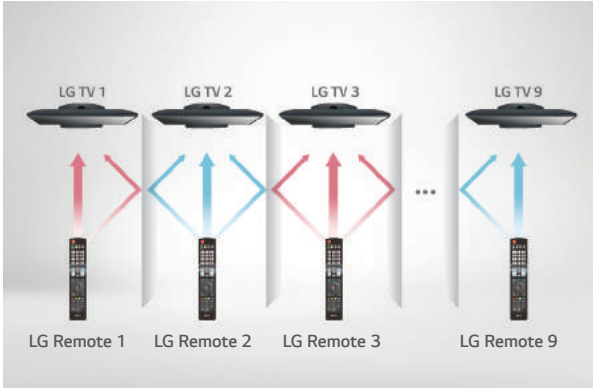
When the TV is turned off, the Instant On feature allows the Pro:Centric app to remain loaded giving guests quick access to content when they turn on the TV.

Self Diagnostics via USB

The UT672M TV Series stores 24-hour diagnostic data, which can be saved to a USB memory device, enabling service engineers to identify technical issues quickly and easily.

Multi-code IR

Multi-code IR* function eliminates any remote control signal interference between TVs in rooms with multiple TVs installed.



* Requires optional multi-code IR remote.

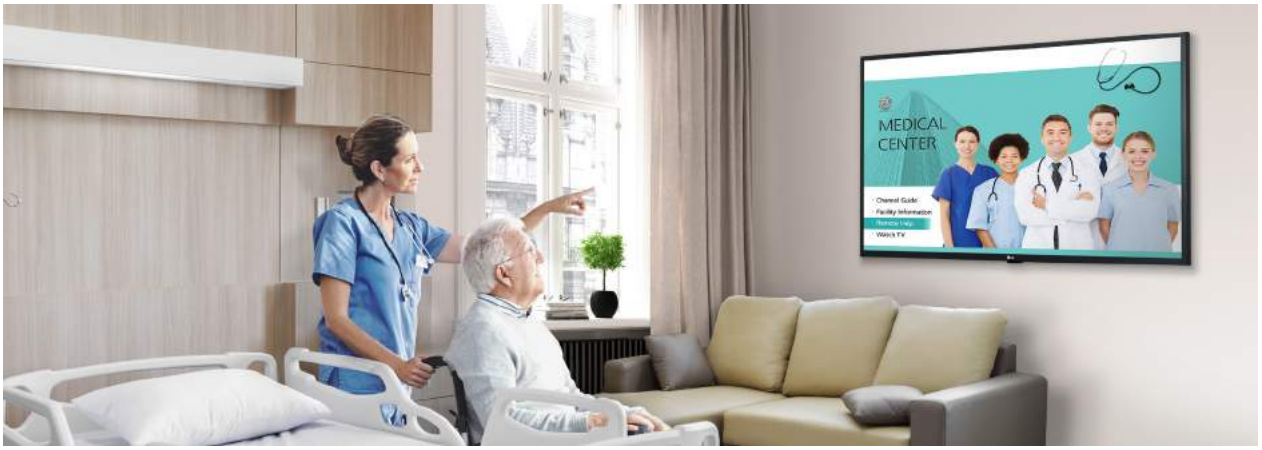
Pro:Centric Application Platform

An industry-leading television that supports the Pro:Centric platform, LG's new UT672M Series allows healthcare facilities to customize the patient room experience. The Pro:Centric application enables the UT672M to provide an interactive program guide and display facility information, such as dietary menus and patient room information.*



* May require additional software and hardware to support third-party partner interactive systems or LG's Free-to-Guest Mode / Pro:Centric application

First Use Wizard

The First Use Wizard offers quick configuration options including Express Script, which allows you to easily enable and configure Hospital Mode features.

Pro:Idiom

Digital Rights Management (DRM) technology unlocks access to premium content to help assure rapid and broad deployment of HDTV and other high-value digital content.

Above screen image is simulated.

UL Listed Ultra HD Hospital TV

UT672M SERIES

FEATURE HIGHLIGHTS

Ultra HD 4K Resolution

UHD delivers a resolution four times higher than that of Full HD, creating a more realistic and immersive television viewing experience. The stunning 8.3 million pixels create flawless images with incredibly vivid detail.

Instant On

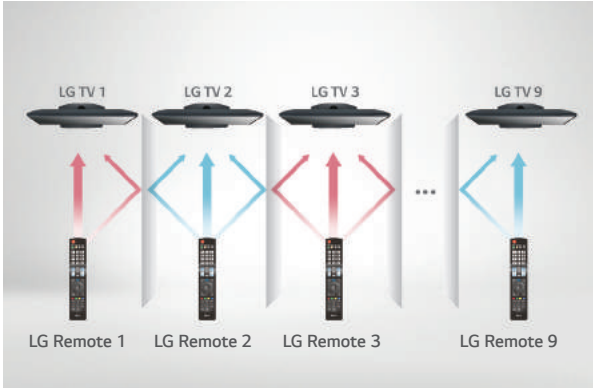
When the TV is turned off, the Instant On feature allows the Pro:Centric app to remain loaded giving guests quick access to content when they turn on the TV.

Self Diagnostics via USB

The UT672M TV Series stores 24-hour diagnostic data, which can be saved to a USB memory device, enabling service engineers to identify technical issues quickly and easily.

Multi-code IR

Multi-code IR* function eliminates any remote control signal interference between TVs in rooms with multiple TVs installed.



* Requires optional multi-code IR remote.

Medical Equipment Resources, Ltd.

University Hospital - ED Expansion Project

Specification Coversheet

Description: Ventilator, Adult / Pediatric / Neonatal

Manufacturer: Hamilton Medical, Inc. ((775) 858-3200)

Vendor: Hamilton Medical, Inc. ((775) 858-3200)

Model: Hamilton T1

Alt ID: VNT-TRP

Mfr #: 161006

Vendor #:

Item ID:

Adult/Pediatric/Neonatal ventilator. Features: Able to display over 50 monitoring parameters. Real time waveforms include Paw, Flow, Volume, Plethysmogram, Capnograph. Operator adjustable alarms. Operates via touch screen or push and turn knob. Ventilation cockpit, patient interfaces and ports, hot-swappable battery. Handle available in different styles. Includes set-up kit and one box of flow sensors. Options not included: APRV/DuoPAP, Trends/Loops or NIV/NIV-ST and must be ordered separately. Does not include optional trolley.

HAMILTON-T1

Technical specification for SW 2.2.x

Ventilation modes

Mode form	Mode name	Mode	Adult/Ped	Neonatal
Volume-targeted modes, adaptive pressure controlled	APVcmv / (S)CMV+	Breaths are volume targeted and mandatory.	✓	✓
	APVsimv / SIMV+	Volume-targeted mandatory breaths can be alternated with pressure-supported spontaneous breaths.	✓	✓
Pressure-controlled modes	PCV+	All breaths, whether triggered by the patient or the ventilator, are pressure-controlled and mandatory.	✓	✓
	PSIMV+	Mandatory breaths are pressure controlled. Mandatory breaths can be alternated with pressure-supported spontaneous breaths.	✓	✓
	DuoPAP	Mandatory breaths are pressure controlled. Spontaneous breaths can be triggered at both pressure levels.	O	O
	APRV	Spontaneous breaths can be continuously triggered. The pressure release between the levels contributes to ventilation.	O	O
	SPONT	Every breath is spontaneous, with or without pressure-supported spontaneous breaths.	✓	✓
Intelligent ventilation	ASV	Operator sets %MinVol, PEEP, and Oxygen. Frequency, tidal volume, pressure, and I:E ratio are based on physiological input from the patient.	✓	--
Noninvasive modes	NIV	Every breath is spontaneous.	O	O
	NIV-ST	Every breath is spontaneous as long as the patient is breathing above the set rate. A backup rate can be set for mandatory breaths.	O	O
	nCPAP	Demand flow Nasal Continuous Positive Airway Pressure.	--	O
	nCPAP-PC	Breaths are pressure controlled and mandatory.	--	O
High flow oxygen therapy	HiFlowO2	High flow oxygen therapy. No supported breaths.	O	O

Technical performance

Description	Specification
Automatic expiratory base flow	Adult/Ped: Fixed at 3 l/min Neonatal: Fixed at 4 l/min
Inspiratory pressure	0 to 60 cmH2O
Maximum inspiratory flow	260 l/min (120 l/min with 100% O2)
Minimum expiratory time	20% of cycle time; 0.2 to 0.8 seconds
Means of inspiratory triggering	Flow trigger control
Oxygen mixer accuracy	± (volume fraction of 2.5% + 2.5% of actual reading)
Preoperational checks	Tightness test, Flow Sensor/O2 sensor/CO2 sensor calibration
Tidal volume	Adult/Ped: 20 to 2000 ml Neonatal: 2 to 300 ml
Brightness setting for display	The range is 10% to 100% brightness. By default, Day is set to 80%; Night is set to 40%.
Brightness with NVG option	The range is 1 to 10. The default is 5.

Standards and approvals

Classification	Class IIb, continuously operating according to EC directive 93/42/EEC
Certification	IEC 60601-1:2005/A1:2012, IEC 60601-1-2:2014, ANSI/AAMI ES60601-1:2005/(R)2012, ISO 80601-2-12:2011, CAN/CSA-C22.2 No. 60601-1:14, EN ISO 5356-1:2015, ISO 80601-2-55:2011
Declaration	The HAMILTON-T1 was developed in accordance with pertinent international standards and FDA guidelines. The ventilator is manufactured within an EN ISO 13485 and EN ISO 9001, Council Directive 93/42/EEC, Annex II, Article 3 certified quality management system. The ventilator meets the Essential Requirements of Council Directive 93/42/EEC, Annex I.
Electromagnetic compatibility	According IEC 60601-2:2014
Air transport compatibility	EN1789:2007+A2:2014, EN 13718-1:2014, EN 794-1:1997 +A2:2009, RTCA/DO-160G, MIL-STD-461F, MIL-STD-810G, Chg. 1, Meth 500.6, Proc. II Operation/Air Carriage, mod.
Safety Class	Class II, Type B applied part (ventilator breathing system, VBS), type BF applied part CO2 sensor including CO2 module connector; SpO2 sensor including adapter, continuous operation according to IEC 60601-1

Pneumatic performance

High-pressure O2	Pressure:	2.8 to 6 bar / 41 to 87 psi
	Connector:	DISS (CGA 1240) or NIST
Low-pressure O2	Pressure:	Maximum 6 bar / 87 psi
	Connector:	Quick-coupling system, compatible with Colder Products Company (CPC) PMC series
Air supply	Integrated turbine	
Inspiratory outlet (To patient port)	Connector:	ISO ID15/OD22 conical
Expiratory outlet (From patient port)	Connector (on expiratory valve)	ISO ID15/OD22 conical

Electrical specifications

Input power	100 to 240 VAC ±10%, 50/60 Hz 12 to 28 VDC (total range 10.2 to 30.3 VDC)	
Power consumption	50 VA typical, 150 VA maximum	
Battery	Electrical specifications:	10.8 V DC, 6.7 Ah, 72 Wh, 50 W typical, 150 W maximum
	Type:	Lithium-ion, supplied by Hamilton Medical only
	Normal operating time:	Typically 4 hours with one battery, 8 hours with two batteries One battery, display brightness = 80%: 4 h One battery, display brightness = 20%: 4.5 h Two batteries, display brightness = 80%: 8 h Two batteries, display brightness = 20%: 9.25 h

Graphical patient data

Graphic type/tab name	**Options**
Waveforms	Pressure, Volume, Flow, PCO2 [1], FCO2 [1], Plethysmogram[2]
Intelligent panels	Dynamic Lung [3], Vent Status, ASV Graph [4]
Trends	1-, 6-, 12-, 24-, or 72-h[5] trend data for a selected parameter or combination of parameters
Loops	Pressure/Volume, Pressure/Flow, Volume/Flow, Volume/PCO2[1], Volume/FCO2[1]

Alarms[6]

Priority	**Alarm**
High priority	Apnea time (s), ExpMinVol high/low (l/min), Oxygen high/low (%), Pressure high/low (cmH2O), Flow sensor calibration needed, Exhalation obstructed, Disconnection, Oxygen supply failed
Medium priority	fTotal high/low (b/min), PetCO2 high/low (mmHg), Pressure limitation (cmH2O), Vt high/low (ml), SpO2 high/low, High PEEP, Loss of PEEP, Pulse high/low
Low priority	High SpO2, Loss of external power

[1] CO2 option required.
[2] SpO2 option required.
[3] Only for adult/pediatric patients.
[4] Only in ASV mode.
[5] 72-hour trend not available in all markets.
[6] For a complete list of alarms, see your ventilator *Operator's Manual*.

Control settings and ranges[7]

Parameter (units)	Range Adult/Ped	Range Neonatal
Apnea backup	On, Off	On, Off
ETS (%)	5 to 80	5 to 80
Flow (l/min)	2 to 80[8]	2 to 12
Flow trigger (l/min)	1 to 20	0.1 to 5

Psupport (cmH2O)	0 to 60	0 to 45
Rate (b/min)	1 to 80	1 to 80
Sex	Male, Female	--
Sigh	On, Off	--
SpO2 monitoring	On, Off	On, Off
SpeakValve	On, Off	--
TI (s)	0.1 to 12	0.1 to 12
TI max (s)	1 to 3	0.25 to 3
Thigh APRV (s)	0.1 to 40	0.1 to 40
Thigh DuoPAP (s)	0.1 to 40	0.1 to 40
Tlow APRV (s)	0.2 to 40	0.2 to 40
Vt (ml)	20 to 2000	2 to 300
Vt/Weight (ml/kg)	--	5 to 12
Weight (kg)	--	0.2 to 30

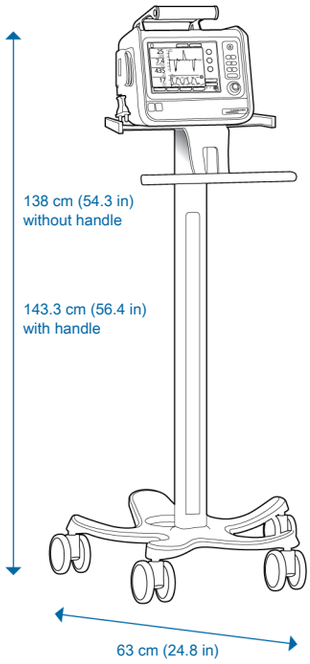
[7] Parameter settings and ranges can vary depending on the selected mode.
[8] Flow limited to 60 l/min in some markets.

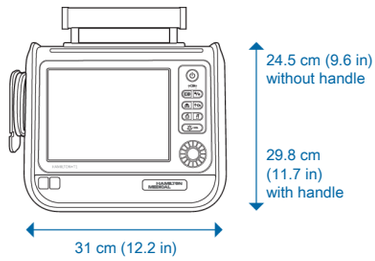
Monitoring parameters

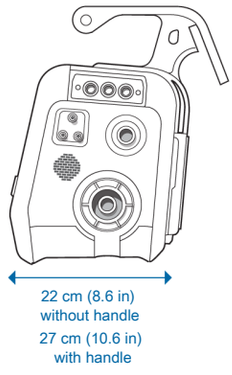
Parameter (units)		Description
Pressure	AutoPEEP (cmH2O)	Unintended positive end-expiratory pressure
	PEEP/CPAP (cmH2O)	PEEP (positive end-expiratory pressure) and CPAP (continuous positive airway pressure)
	Pinsp (cmH2O)	Inspiratory pressure
	Pmean (cmH2O)	Mean airway pressure
	Ppeak (cmH2O)	Peak airway pressure
	Pplateau (cmH2O)	Plateau or end-inspiratory pressure
Flow	Control Flow (l/min)	The set flow of gas to the patient when using HiFlowO2.
	Flow (l/min)	In nCPAP mode, the average flow, updated every second. In nCPAP-PC mode, the average flow during expiration, updated every breath.
	Insp Flow (peak) (l/min)	Peak inspiratory flow, spontaneous or mandatory
	Exp Flow (peak) (l/min)	Peak expiratory flow
Volume	ExpMinVol or MinVol NIV (l/min)	Expiratory minute volume
	MVSpont or MVSpont NIV (l/min)	Spontaneous expiratory minute volume
	VTE or VTE NIV (ml)	Expiratory tidal volume
	VTI (ml)	Inpiratory tidal volume
	VLeak (%)	Leakage percent or total minute volume leakage
	MVLeak (l/min)	Leakage percent or total minute volume leakage
CO2	FetCO2 (%)	Fractional end-tidal CO2 concentration
	PetCO2 (mmHg)	End-tidal CO2 pressure
	slopeCO2 (%CO2/l)	Slope of the alveolar plateau in the PetCO2 curve, indicating the volume/flow status of the lungs
	V'alv (l/min)	Alveolar minute ventilation
	Vtalv (ml)	Alveolar tidal ventilation
	V'CO2 (ml/min)	CO2 elimination
	VDaw (ml)	Airway dead space
	VDaw/VTE (%)	Airway dead space fraction at the airway opening
	VeCO2 (ml)	Exhaled CO2 volume
	ViCO2 (ml)	Inspired CO2 volume
SpO2	SpO2 (%)	Oxygen saturation
	Pulse (1/min)	Pulse
	SpO2/FiO2 (%)	The SpO2/FiO2 ratio (%) is an approximation of the PaO2/FiO2 ratio, which, in contrast to PaO2/FiO2, can be calculated noninvasively and continuously.
	PI (%)	Perfusion index
	PVI (%)	Pleth variability index
	SpCO (%)	Carboxyhaemoglobin saturation

Parameter (units)		Description
SpO2	SpMet (%)	Methaemoglobin saturation
	SpHb (g/dl or mmol/l)	Total haemoglobin
	SpOC (ml/dl)	Oxygen content
Oxygen	Oxygen (%)	Oxygen concentration of the delivered gas
	Oxygen consumption (l/min)	The current oxygen consumption rate
Time	I:E	Inspiratory:expiratory ratio
	fControl (b/min)	Mandatory breath frequency
	fSpont (b/min)	Spontaneous breathing frequency
	fTotal (b/min)	Total breathing frequency
	TI (s)	Inspiratory time
	TE (s)	Expiratory time
Lung mechanics	Cstat (ml/cmH2O)	Static compliance
	P0.1 (cmH2O)	Airway occlusion pressure
	PTP (cmH2O*s)	Pressure time product
	RCexp (s)	Expiratory time constant
	Rinsp (cmH2O / (l/s))	Inspiratory flow resistance
	RSB (1 / (l*min))	Rapid shallow breathing index

Physical characteristics







Weight	6.5 kg (14.3 lb) 18.5 kg (40.8 lb) with trolley The trolley can accommodate a maximum safe working load of 44 kg (97 lb)

staxi® Ranger Chair - 800lb Capacity

Anti-microbial Cushions
For optimum hygiene and ease of maintenance.

Lifting Armrests
Facilitates easy and safe side entry and exit of passengers. Anti-Microbial.

Non Folding Frame
Strong, durable and safe.

Footrest
For passenger comfort and safety. Lift for front entry option.

Turns within its own circumference

Fail-safe Brake System
For passenger safety and security.

Courtesy Rack
Ideal for storage of small bags, papers, magazines. Hanging hooks 25lbs (11.5kg) weight capacity – ideal for handbags, hand luggage, medical charts.

Large Luggage Area
For passenger convenience and safety.

High Quality Casters & Anti-tip Design
Easy to maneuver for a smooth and reliable ride.

The Ranger is the ideal chair for hospital facilities, airports and stadiums.

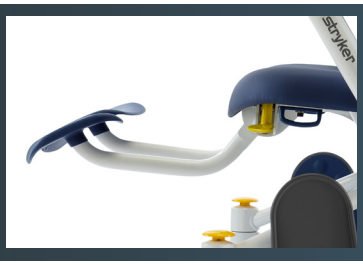
Prime TC®
Transport Chair

Patient transport redefined.

When it comes to the patient experience, details matter. That is why every aspect of the Prime TC Transport Chair is designed to help create a welcoming and safe environment that speaks volumes to caregivers, patients and their family members. Obvious touchpoints help make operation intuitive for all users. BackSmart ergonomics have been incorporated into the design to help reduce the bending and reaching that may be associated with caregiver injury. A rigid frame helps enhance durability while reducing the risk of theft. This investment in the well-being of patients and caregivers tells them you care about their comfort and safety – it tells them that they matter.

Flip-up footrests help reduce trip hazards by providing a clear path of patient ingress and egress. Foot-operated swing away functionality enhances access to the patient and closer positioning to beds, cars or tables.

BackSmart push handles help enhance caregiver safety by allowing caregivers to position their elbows at an ergonomic 90-degree angle and accommodate caregivers of virtually any height.



Optional leg supports are permanently attached for comfortable elevation in a fixed upright position. Easily stow away when not in use.

Big Wheel maneuverability helps make steering and cornering easier.

One-touch central brake reduces bending and reaching while enhancing caregiver efficiency.

Stand-assist armrests provide a raised and extended touchpoint for patient ingress and egress.

Rigid, nestable frame helps prevent theft while preserving valuable floor space.

Designed for cleanability, the chair frame consists of seamless components that are easy to disinfect and are power-washable.*

Yellow activation points make operation intuitive for all users.

Movable, but not removable, components help reduce the risk of lost or stolen parts.

500 lb. safe working load accommodates even heavy patients.

Durable 1" thick IV pole is chrome-plated to prevent rust and features enclosed hooks for safety.

Upright O_2 tank holder helps minimize bending and lifting required to place a heavy O_2 tank underneath the chair.

*Chairs with the optional padded seat are not power washable.

Prime TC®
Transport Chair

Standard features

- Stand-assist armrests
- Flip-up footrests with swing-away functionality
- BackSmart Push Handles
- One-touch central brake
- Anti-tip wheels
- Chart holder

3M™ Bair Paws™ System
Warming Unit Model 875

Bair Paws™

Versatile Patient Warming

The 3M™ Bair Paws™ system is revolutionizing forced-air warming by providing clinicians options for comfort and clinical warming throughout the perioperative process in one convenient gown. When connected to a Bair Paws warming unit, the Bair Paws gown provides clinical prewarming or comfort warming as patients await surgery. In the O.R., the same gown offers clinical warming for select surgical procedures when connected to a 3M™ Bair Hugger™ warming unit. The gown continues to warm in PACU, with both comfort and clinical capabilities.

3M

Mounting configurations:

Wall Mount
90080

IV Pole Mount
90076

Bedrail Mount
90079

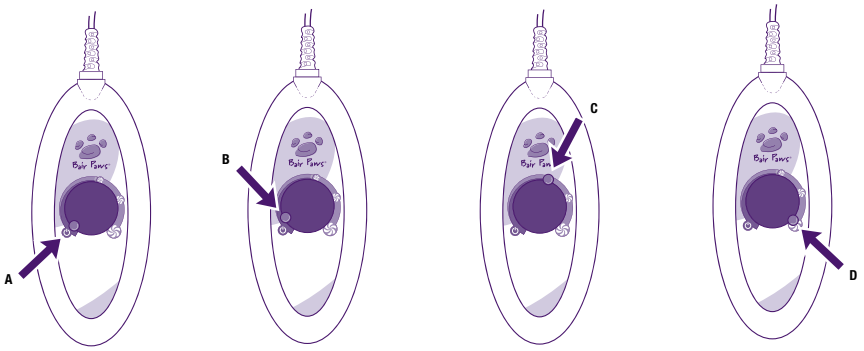
Wall-to-Rail Mount
90074

Only the 3M™ Bair Paws™ system offers patient-adjustable warming with a simple twist, as the unit's handheld controller allows patients to adjust the temperature of the air flowing through the gown to a level that's right for them.

The warming unit model 875 is lightweight, simple to use and is placed easily on the wall, bedrail, IV pole or a flat surface.

The Bair Paws warming unit provides:

- The ability to prewarm patients to help in the prevention of unintended hypothermia
- Personalized comfort as patients control the unit's airflow and temperature (ambient to 43°C)
- Easy "snap-fit" flexibility in mounting the unit on the wall, a bedrail or an IV pole. The unit can also be placed on a flat surface.
- Convenient, built-in hose storage
- Small, lightweight design



When the knob is in position A, the warming unit is OFF.

As the knob is rotated from position A to B, the warming unit turns on LOW AIRFLOW and LOW HEAT.

By turning the knob from position B to C, the air temperature increases from slightly above room temperature to approximately 41ºC (106ºF), while the blower remains on LOW AIRFLOW.

As the knob rotates clockwise past position C, the air temperature and blower's airflow both increase.

At position D, the warming unit is on HIGH HEAT and HIGH AIRFLOW. The air temperature will stabilize at 43º ± 3ºC (109º ± 5.4ºF).

Specifications

Dimensions
13" high x 7.7" wide x 4" deep (33 cm high x 19.6 cm wide x 10.2 cm deep)

Resin Slim Jim® Step-On Containers

Slim profile and small footprint maximize space to fit in the tightest spaces.

- Commercial-grade pedal tested to 300,000 cycles to ensure life in heavy-use environments*
- Robust lid structure features a rigid arch design to prevent warping
- Stainless steel components resist corrosion for long-lasting, smooth operation
- Liner retainer band and cinch easily and securely holds polyliners
- Optional dual-stream rigid liner simplifies sorting, making recycling quick and easy
- Increased foot pedal clearance for easier access and operation
- Quiet and controlled lid closure minimizes noise to enhance guest and patient satisfaction
- Self-extinguishing to ensure fire safety and comply with Factory Manual (FM) regulations
- Meets OSHA and OBRA standards for worker and environmental safety

STEP-ON Receptacles

THE SOLUTION FOR SANITARY WASTE DISPOSAL!

The Step-On Receptacle line resolves a very important issue ~ cleanliness in waste disposal. Because the lid is activated by a foot pedal, there is no need to touch the lid by hand. This answers the increasing concern about health and safety for the public.

Sturdy, no slip step pedal allows for hands-free use.

Includes a unique “key-way” notch to secure standard size polyliners.

Optional rigid plastic liners assist in offering a no-leak base and provide a convenient means for emptying.

STEP-ON RECEPTACLES

- Allow for convenient and hygienic disposal of various waste types
- Constructed of durable Derma-Tek® plastic ~ will not rust, chip or peel like conventional metal products, and is easy to clean and keep clean
- All plastic construction results in quiet, smooth operation compared to metal units
- Lid closes securely to base to keep odors contained
- Lid attachment is covered at top and does not have hinge pins that will collect dirt
- Available in Red, White and Beige
- Available in 18 and 23 gallon sizes

Wheels are covered to keep debris from interfering with wheel movement.

23BE

Larger sized 23 gallon Step-On receptacles offer:

- Wheels that provide easy mobility and are covered to keep debris from interfering with their movement
- Wire frame ensures that the receptacle will not tip forward when activated, protecting the pedal as well as the user
- Frame is made of plated steel for easy cleaning in medical environments

DERMA-TEK® FINISH

METAL FREE

Smaller sized 18 gallon Step-On receptacles offer:

- Smaller size to fit into tighter spaces
- Non-slip pedal that is quiet when used
- Rounded design is easy to clean
- Large opening for waste disposal

RECYCLING RECEPTACLES 20" x 11" x 30" H

A] WALL HUGGER® RECYCLE RECEPTACLE

Built of durable plastic, these receptacles work efficiently in tight spaces. Their sleek, attractive design holds either 16 or 23 gallons of recyclables, but protrude less than one foot from the wall. A molded-in bag cinch eliminates the need to tie knots in poly liners. The base features molded-in hand grips which provide a secure area to grasp when lifting or dumping. Designed with smooth, seamless construction for easy cleaning and prolonged life. The 23 gallon size is 30˝ tall, making it ideal for placement under standard work tables.

Resin Slim Jim® Step-On Containers

Slim profile and small footprint maximize space to fit in the tightest spaces.

- Commercial-grade pedal tested to 300,000 cycles to ensure life in heavy-use environments*
- Robust lid structure features a rigid arch design to prevent warping
- Stainless steel components resist corrosion for long-lasting, smooth operation
- Liner retainer band and cinch easily and securely holds polyliners
- Optional dual-stream rigid liner simplifies sorting, making recycling quick and easy
- Increased foot pedal clearance for easier access and operation
- Quiet and controlled lid closure minimizes noise to enhance guest and patient satisfaction
- Self-extinguishing to ensure fire safety and comply with Factory Manual (FM) regulations
- Meets OSHA and OBRA standards for worker and environmental safety

FM APPROVED OSHA OBRA

BRUTE® CONTAINERS

BRUTE® containers are guaranteed to never fade, warp, crack, or crush, with a proprietary design constructed with the highest quality material.

Features and Benefits:

- Venting channels make removing liners up to 50% easier, improving productivity and reducing the risk of injury
- Commercial-grade construction guaranteed to never fade, warp, crack, or crush
- Bag cinches secure liners, allowing for knot-free liner changes. Tested to 200,000 cycles
- Contoured base handles improve grip and ergonomics, reducing strain and improving efficiency
- Rim with rib-strengthened design increases strength and resists crushing
- Rounded handles make lifting and moving easier
- Reinforced base is specifically engineered to be dragged over rough surfaces in tough environments

NSF
2 & 21 Compliant

Rubbermaid® Commercial Products

BRUTE® LIDS

BRUTE® lids are constructed with the highest quality material; a UV inhibitor ensures long life in even the most extreme commercial environments. Lids come in a variety of different styles, including self-draining lids, dome top lids, and funnel lids to meet any commercial need.

Features and Benefits:

- Self-draining lids have channels that prevent water from pooling, reducing still water buildup, and include ridges that enable stacking to provide space-efficient storage
- Dome top lids have a spring action door that allows for easy trash disposal while keeping odors and insects out
- Self-draining lids and dome top lids both have a snap-lock feature that ensures a secure fit
- Funnel top lids have a cut-out top that enables hands-free refuse disposal and a funnel design that conceals waste from public view

Rubbermaid® Commercial Products

BRUTE® DOLLIES

BRUTE® dollies are designed to be durable, long-lasting, and are able to withstand the toughest commercial environments while simplifying everyday tasks.

Features and Benefits:

- Rugged casters help keep fully loaded BRUTE® containers stable, even on rough and uneven floors, and swivel smoothly for easy maneuvering
- Twist locks hold containers securely in place and unlock easily for unloading, allowing for easy transport
- Structural foam construction provides superior strength and durability

BRUTE® CADDIES

BRUTE® caddies are designed to improve productivity. Caddies make the BRUTE® container more versatile and efficient, making the toughest jobs easier.

Features and Benefits:

- The Caddy Bag is made of a heavy-duty vinyl material with elastic pockets that make on-board storage easy. The adjustable straps make installation and removal easy on 32- and 44-gallon BRUTE® containers
- The Rim Caddy has multiple storage compartments and hooks, along with liner retention bands to keep liners securely in place, and has snap-on tabs to hold the caddy in place

Slim Jim® Accessories

Promote recycling and improve productivity.

Stainless Steel Dollies

- Collect and transport up to four streams of waste and recyclables with the new stainless steel multi-dollies for Slim Jim® containers
- Constructed from high quality stainless steel material that is easy to clean and won't rust or chip in commercial environments
- Features 3" nonmarking quiet casters that allow for smooth and quiet maneuverability
- Locking feature on casters creates a stable recycling station or collection site
- Fits both 16- and 23-gallon Slim Jim® Vented Containers

Resin Trainable Dolly

- Features a side clip-on connection that allows you to train several dollies together for collection and transportation purposes
- Foot pedal release makes disconnecting dollies quick and easy
- Structural foam construction ensures maximum durability in commercial environments
- Fits both 16- and 23-gallon Slim Jim® Vented Containers

Slim Jim® Containers with Venting Channels

Slim Jim® Containers with venting channels deliver the most efficient solution for collection, transportation, and disposal of multi-stream waste and recyclables.

- Venting channels make removing liners up to 80% easier, improving productivity and reducing the risk of worker injury*
- Four bag cinches secure liners around the rim of the container and allow for quick, knot-free liner changes
- Handles at the base and rim of the container improve grip and control while lifting and emptying full containers
- Rim with rib-strengthened design increases strength and resists crushing
- Build a recycling station with a variety of dolly and lid options to meet any facility need
- **Use Waste Stream Label Kit Version E (1977789) to ensure waste sortation accuracy. See more on page 44.**

1971258 FG354060GRAY

Can Liner Cinches
Four pull-through holes and can liner cinches eliminate knot tying.

When ordering products with **BOLD** color codes, please specify color code after the product number. Refer to the Standard Color Guide at the back of the catalog.

Medical Equipment Resources, Ltd.

University Hospital - ED Expansion Project

Specification Coversheet

Description: X-Ray Unit, Mobile, Digital
Manufacturer: Carestream Health ((888) 777-2072)
Vendor: Carestream Health ((888) 777-2072)
Model: DRX-Revolution

Alt ID: XRY-MBL
Mfr #: 1019397
Vendor #: 1019397

Item ID:

Mobile digital x-ray unit. Features collapsible column, touch-screen display, bins for gloves, extra batteries, markers, bags and lockable storage for the detector. Specify choice of detectors (not included): DRX-1 (uses a Gadolinium Scintillator: GOS), DRX-1C (uses a Cesium Scintillator: Csl) or DRX 2530C (smaller Cesium Scintillator for pediatric or orthopedic imagine).

General Product Detail

Arch Sig:	Yes	**Spatially Sig:**	No
Arch Code:	2-Movable, Elect	**ADA:**	No
Custom Code:	Unassigned	**Antimicrobial:**	No
Furnish Install:	O/V **Type:** Medical	**Green:**	No

Physical Requirements

Width:	22.75 in (578 mm)	**Left:**	N/A
Depth:	48.00 in (1219 mm)	**Right:**	N/A
Height:	77.00 in (1956 mm)	**Front:**	N/A
Max Weight:	1268 lbs (575.2 kg)	**Back:**	N/A
Mounting:	Floor-Mobile	**Top:**	N/A
		Bottom:	N/A

Electrical Requirements

Volts:	120	**Watts:**	REM
Hz:	60	**Amps:**	20
Phase:	Single	**BTU/hr:**	N/A
KVA:		**Ded. Circuit:**	No
Emer. Power:	No	**Plug Type:**	Type B (NEMA 5-15)

Utility and Technology Requirements

Water - Cold:	No	**Gasses:**	No
Water - Hot:	No	**Drain:**	No
Water - Treated:	No	**Steam:**	No
Vent:	No	**Vacuum - Dental / Medical:**	No / No
Tech Connect:	Yes		

Structural Requirements

Seismic:	No	**Pre-approval:**	

Product and Project Item Notes

Specification:
Height with column extended is 77 inches.

INNOVATION ON THE MOVE.

X-Factor thinking has revolutionized portable imaging. The CARESTREAM DRX-Revolution Mobile X-ray System lets you bring the key capabilities of a radiology room right to the patient – at the bedside, in the OR, the ICU or EDU.

MOBILITY REDEFINED.

OPTIMIZED IMAGING.

The DRX-Revolution features a unique tube-and-grid alignment system that delivers superb X-ray quality and encourages grid use. A powerful 32kW generator, dual-focal spot tube and EVP Plus image processing combine to further optimize images. This means fewer retakes and more support for faster, more accurate diagnoses.

The DRX-Revolution also offers prior image review, including techniques and exposure history with its PACS-based query/retrieve capability.

Custom Capabilities for ICU and Pediatric Imaging
You can enhance your system with a specialized ICU package that includes Tube and Line Visualization capability; it provides a companion image that is enhanced for a clear view of tube and PICC lines to verify correct positioning.

The Pediatric package utilizes image processing specific to pediatric views. It's designed to optimize image quality by utilizing pediatric-specific acquisition and processing parameters that suppress noise and enhance detail based on patient size.

Your Choice of DRX Detectors
The DRX-1 Detector uses a Gadolinium (GOS) Scintillator for general radiography imaging.

The DRX-1C Detector uses a Cesium (CsI) Scintillator for dose-sensitive applications like pediatrics, with increased DQE and MTF.

The DRX 2530C Detector offers all the performance of the DRX-1C Detector in a smaller-format design, optimal for pediatric imaging – offering fast, easy positioning in incubator trays. The 2530C is also ideal for orthopaedic imaging.

CARESTREAM Smart Services

A PARTNER WHO CARES AS MUCH AS YOU DO.

A Community of Service and Support

Benefit from all the advantages of our Customer Success Network. We work continuously to provide superb imaging performance, offer you new innovations as your needs change, and help you make the most of your budget and resources. Carestream's Customer Success Network surrounds you with a dynamic team of exceptional experts, with a Single Point of Entry for easy, customized access to the right people in every situation.

You and your patients will benefit from the expertise and best practices only Carestream can deliver, based on thousands of customer engagements worldwide and our 100-year heritage in medical-imaging innovation.

Detector Specifications:

DRX-1/DRX-1C Detectors
Receptor Type: Amorphous Silicon
Conversion Screen: GOS or CsI
Pixel Size: 139 µm x 139 µm
Physical Size: 35 cm x 43 cm (ISO 4090) 38.35 cm x 45.95 cm x 1.55 cm

DRX 2530C Detector
Wireless standard 802.11n
Image Size: 25 x 30 cm
Pixel Pitch: 0.139 mm
Physical Size: 28.4 x 41.5 x 1.6 cm (11.2 x 16.3 x .63 in)

Product Specifications:

X-ray Generator
Maximum Power Output: 32kW
kVp Range: 40 to 150 kVp
mAs Range: 0.1 to 320 mAs

X-ray Tube
Focal Spot Size: 0.6 mm / 1.2 mm
Target Angle: 14 degrees
Anode Heat Capacity: 300 kHU (212 kJ)

Tube Head Movement
Maximum SID to Floor: 2022 mm (79.6 in.)
Minimum SID to Floor: 683 mm (26.9 in.)
Tube Arm Reach: 1351 mm (53.2 in.) (center of cart to axis of X-ray beam)
Column Rotation Range: +/- 270 degrees
Tube Rotation: +180 degrees CW/ -135 degrees CCW
Tube Tilt: -10 to +90 degrees
Collimator Rotation Range: +/- 90 degrees

Physical Characteristics
Weight: 575 kg (1268 lbs)
Height (column collapsed): 1295 mm (51.0 in.)
Height (column extended): 1956 mm (77.0 in.)
Width: 576 mm (22.7 in.)
Length: 1219 mm (48.0 in.)

User Interface
Primary: 19 in. Touch Screen
Secondary (tube head): 8 in. Touch Screen
